# BARTOW COUNTY COMMUNITY ASSESSMENT

# Introduction

In 2005, Bartow County and its respective municipal governments agreed to develop a joint Comprehensive Plan to be submitted to the Georgia Department of Community Affairs (DCA) to satisfy DCA requirements for Comprehensive Planning by Qualified Local Governments. The Bartow County 2006 Comprehensive Plan must be approved by XXX.

This is not the first time Bartow County and its respective municipalities have engaged in joint long-term planning efforts. In 2000, in anticipation of the approaching comprehensive planning process, Bartow County and five of its municipalities (Adairsville, Cartersville, Emerson, Euharlee and Kingston) cooperated in a joint strategic planning effort that resulted in mission and vision statements, S.W.O.T. (Strengths, Weaknesses, Opportunities and Threats) analyses, and a list of goals and objectives for each community. The cities of Taylorsville and White declined to participate in this effort at that time because of their small size and limited development activity.

Bartow County government has conducted other planning efforts on its own in the past. In 1997, Bartow County developed a Growth Management Plan that was designed to provide "...a long-term vision (50 years) of Bartow County reflecting the desires of current residents and the prospects for future development." (*Growth Management Plan*, Bartow County, February 1997, p.ES-1.)

Several of the individual cities also have engaged in their own planning processes. Cartersville and Euharlee both have recently developed Comprehensive Plan documents for their own internal use and to help with the joint Comprehensive Plan process. While those documents cannot be incorporated fully into this document, key parts of those documents are included in this effort.

Although not required by DCA, the first section of this document includes the mission and vision statements developed by each community, with the exception of Cartersville, for the 2000 Strategic Plan. For Cartersville, a vision statement and "core values" developed by the city for their 2006 Comprehensive Plan are included instead.

Results of the 2000 SWOT analyses are also included later in this Introduction.

# Mission Statements for Bartow County and Local Governments

Bartow County and four municipalities have adopted the following respective Mission and Vision statements.

#### Bartow County

Mission Statement:

"The mission of Bartow County is to provide quality services to all citizens, promote strategic economic development that both protects our natural resources and preserves our rich heritage, and to educate our citizenry to meet the challenges of our future, so that Bartow County is recognized as the best community in which to live, work and raise a family."

Vision Statement:

"Bartow County is recognized as the best community to live, work and raise a family."

#### City of Adairsville

Mission Statement:

"The city of Adairsville will promote commercial and industrial job opportunities for its citizens. It will work to provide a wider range of entertainment, retail and health services. Adairsville will increase tourism through the development of historical, retail and recreational areas.'

Vision Statement:

"Adairsville is a picturesque, historical town with state-of-the-art services and quality people."

#### City of Emerson

Mission Statement:

"The mission of Emerson is to establish an infrastructure adequate to support the needs of its people and create an atmosphere that encourages the pursuit of the American way."

Vision Statement:

"Emerson is a friendly, people-oriented community."

#### City of Euharlee

#### Mission Statement:

The city of Euharlee seeks to create an environment in which partnerships between the public and private sectors are developed for the purpose of improving the quality of life for our citizens. The city will foster a climate conducive to historic preservation, commercial development and the improvement of educational, social and cultural opportunities for our citizens."

Vision Statement: "The city of Euharlee will be recognized as an historic, yet dynamic, community."

#### City of Kingston

#### Mission Statement:

"The city of Kingston will seek to become a great place to live, raise a family, and retire by protecting its historical heritage, providing an environment for controlled growth through the adoption of a formal land-use plan and the development of adequate water and sewer systems, and emphasizing residential restoration and growth."

Vision Statement:

"The city of Kingston will be known as a great place to live, raise a family, and retire."

#### City of Cartersville

The city of Cartersville adopted the following Mission Statement and "Core Values" in its 2006 Comprehensive Plan.

Mission Statement:

"Cartersville is a progressive, attractive community providing opportunity to work, learn, live and play in connection with one another."

Core Values:

Responsible – Accountability for actions Exceptional Service – Going the extra mile Security – Safe, inviting community Professional – Trained, prepared and competent Equality – Honor diversity by being fair to everyone Caring – Concern and respect for all Trust – Displaying vision, honesty and integrity

# SWOT Analyses for Bartow County and Respective Cities

In anticipation of the development of the Bartow County Comprehensive Plan, Bartow County and many of its respective cities began a process of strategic planning as far back as year 2000. This process identified each community's strengths, weaknesses, threats and opportunities. The following is a summary of the analyses conducted by each participating community.

# A. Strengths of Bartow County and Selected Cities

The following strengths were identified for unincorporated Bartow County and the respective cities:

#### Bartow County

- County government departments work well together with good internal communication network and experienced staff
- Good leadership
- Excellent location between Atlanta and Chattanooga
- Sole commissioner system of government viewed as a positive
- Excellent, diverse available workforce
- County has a Capital Improvement Plan
- County routinely engages in long-range strategic planning processes
- County has excellent facilities
- County has a good, growing tax base
- Good schools
- Great natural resources in county
- ✤ Leaders have sincere concern for environment
- Good recreation department
- County provides excellent HR benefits

#### City of Adairsville

- ✤ Location between Atlanta and Chattanooga off major interstate highway
- Only 30 minute drive to major shopping outlets
- Good utilities and infrastructure
- Excellent water quality and availability
- ✤ Has a nice historic area on the national historic register
- Many civic organizations
- Good educational facilities
- Industrial parks provide opportunities to attract industry

- ✤ Few transportation problems
- Good recreational opportunities
- ✤ Good governing/leaders

#### City of Cartersville

- Good utility system
- Low crime rate
- Superior services to residents
- Good schools
- Excellent recreational opportunities
- Vital downtown area
- ✤ Good quality of life

#### City of Emerson

- ✤ Small town atmosphere
- ✤ Good churches
- Good schools
- Good emergency services
- Good race relations
- ✤ Water and sewer system
- ✤ Geographic location close to Atlanta, not too close
- Quiet area
- No taxes
- City services owned without taxes
- Access to good hospital
- Good neighbors

#### City of Euharlee

- Historical areas/resources
- City park
- ✤ Library
- Public Safety services police, EMT and fire department. Fire department is actually operated by Bartow County but is located in city
- Proximity to good local schools
- Diverse housing opportunities
- ✤ Good transportation routes access to Highway 113 and I-75
- Room for commercial development

#### City of Kingston

- ✤ Historic area/resources museums, historic downtown etc.
- City park ballfields, walking trails, picnic tables, basketball courts

- ✤ Public Safety and utility services police, fire, water and garbage
- Churches strong religious convictions of residents
- Many service organizations
- Proximity to job opportunities in other cities Adairsville, Cartersville, Rome, Calhoun
- Post Office
- City Hall facility can be used for meetings
- Some economic/commercial activity grocery, restaurants, barber, etc.
- Numerous small, home-based businesses
- Some industrial opportunities
- ✤ Significant amount of vacant, undeveloped land

Common strengths among the various communities include the following: good educational opportunities; recreational resources; high quality of life; the people; civic organizations; historic areas/resources and excellent natural resources.

# B. Weaknesses of Bartow County and Selected Cities

The following weaknesses were identified for unincorporated Bartow County and the respective cities that participated in the strategic planning process:

#### Bartow County

- Difficulties in coordinating projects
- Need larger facilities
- Need better cross-training of staff
- Need more four lane highways
- ✤ Loss of key industries/ need more industrial growth
- Need to expand infrastructure
- Insufficient technology systems
- Better computer/tech training
- Shortage of staff
- ✤ Shortage of equipment
- Need to do better job of keeping employees informed

#### City of Adairsville

- Need to improve/expand educational facilities and equipment
- Need to improve educational curriculum
- More improvements to downtown area
- Need more job opportunities
- ✤ Need more activities for senior population ways of keeping them involved
- More youth activities
- Police department is understaffed

Lack of local shopping/dining opportunities

#### City of Cartersville

- Traffic congestion
- Need to protect long-term water supply
- Lack of adequate industrial properties
- ✤ Lack of cooperation with county school board
- Lack of funding/adequate budget
- Need smaller student/teacher ratios in schools
- ✤ Lack of fire trucks/facilities on north side of city
- City government does not have adequate staff

#### City of Emerson

- ✤ Difficulties keeping community clean
- Too close to landfill
- Lack of industry
- ✤ Lack of recreation/entertainment opportunities in immediate area
- Chemical plant air pollution
- Lack of sidewalks
- Lack of storm drainage
- Bad intersection at Doug's Place

#### City of Euharlee

- ✤ Small geographical size
- Historical assets of the city serve to limit the types of acceptable development in downtown area
- ✤ No areas for industrial development within city limits
- ✤ Relatively small tax base
- Expanding housing developments will strain city services

#### City of Kingston

- No sewer system
- Geography and land use issues
- Only one city-owned well. Not enough for expansion. Difficulties identifying satisfactory location for second well
- ✤ Lack of access to medical care. No walk-in clinic in city. No dentist
- ✤ No bank in city
- Lack of adequate housing in city. Lack of diverse housing opportunities. Most housing is older, low-income housing for retired residents.
- ✤ No welcome center that is open full-time

Common weaknesses included the following: increasing traffic; lack of adequate industrial growth; lack of adequate infrastructure; need for highway expansion.

# C. Threats Facing Bartow County and Selected Cities

The following threats were identified for unincorporated Bartow County and the respective cities that participated in the strategic planning process:

#### Bartow County

- Burgeoning residential growth
- Unfunded mandates from state and federal governments
- Increasing traffic congestion
- ✤ Increasing threats to water quality in Lake Allatoona.
- Atlanta's growth creeping into Bartow County
- Lack of growth coordination at state/federal levels
- Pollution
- Inadequate school funding
- Outdated infrastructures
- EPD/EPA regulations
- Public relations/public expectations re: public services
- ✤ Liabilities and legal issues
- Increase in indigent population increase pressure on social services
- Elections continuity

#### City of Adairsville

- ✤ Traffic will get worse
- Lack of communication with county school board
- Inadequate emergency preparedness
- Increasing drug usage/manufacturing problem

- Encroaching residential growth
- Environmental issues water
- Insufficient population to adequately support many local businesses
- Need to attract new businesses
- ✤ People going outside Bartow and Adairsville to shop

#### City of Cartersville

- ✤ Traffic will get worse
- Electric deregulation
- Property taxes used for city operations vs. School Board
- Sales tax lost to internet sales
- Loss of small town identity
- Pollution and threats to water supply
- EPA regulations
- ✤ Day population vs. residential population

#### City of Emerson

- ✤ Air pollution
- Through traffic traffic coming through Emerson to get to other parts of county
- 🔶 Litter
- Surrounding growth
- Drug use
- Deteriorating infrastructure

#### City of Euharlee

- ✤ Small geographical size
- Relatively small tax base
- ✤ Housing/population growth will tax city services

#### City of Kingston

- City is only one square mile in area and it has no control over how land area around city perimeter will be developed
- City has no formal land-use plan of its own (note: since remedied)

Common threats to all localities include the following: increasing traffic congestion; air and water pollution; surrounding growth; deteriorating/outdated infrastructure; EPA/EPD regulations; unfunded state/federal mandates; creeping growth from Atlanta.

# D. Opportunities for Bartow County and Selected Cities

The following opportunities were identified for unincorporated Bartow County and the respective cities that participated in the strategic planning process:

#### Bartow County

- ✤ Regionalization: bring together other organizations to do large projects
- Networking technology
- Need to take steps to preserve/protect environment, natural resources and quality of life now
- ✤ Adopt strategies now to control future growth
- ✤ Good position to attract new commercial development

#### City of Adairsville

- Develop tourism, especially around Barnsley Gardens
- Develop local technical schools
- Encourage preventative healthcare
- Establish a Boys and Girls club
- Develop a senior citizen volunteer/service program
- Develop a local organization for business/industry
- Need to improve roads and other infrastructure now
- Establish job fairs and training programs

#### City of Cartersville

- Property tax for city operations
- ✤ Seek state money for development of greenspace
- Housing revitalization (EVHA)
- ✤ Regional cooperation for intergovernmental projects
- ✤ Growth of higher education Floyd and North Metro Tech
- Identify/develop a new regional water source
- Milam property development
- Revitalization of Summer Hill property
- Establish fiber optics network
- Look for creative funding opportunities

#### City of Emerson

- Create small shopping area
- Establish recreation for young people park
- Establish a storm warning system

- Investigate a bridge over RR tracks
- Establish neighborhood watch program
- Community cleanup Keep America Beautiful program

#### City of Euharlee

- Pursue diverse housing opportunities
- ✤ Identify area for commercial development

#### City of Kingston

✤ No opportunities identified

# I. Issues and Opportunities Related to 2006 Comprehensive Plan

# A. Population

Bartow County and its respective cities have identified the following population issues within their jurisdictions:

#### Bartow County

- Bartow County and will experience high rates of population growth over the next 20 years.
- Population growth among specific demographic subgroups, such as school-age children, senior citizens and people with diverse ethnic backgrounds will necessitate increased efforts at service provision for these populations that are sensitive to the needs of those groups.
- The county should develop its own long-range forecasting models in order to accurately evaluate population trends.
- The county should discourage "sprawl" by encouraging new development and redevelopment in areas around existing resources and infrastructure.
- The county should pursue better coordination and cooperation between their respective entities on questions of growth and development.

#### City of Adairsville

The city of Adairsville will experience significant population growth over the next 20 years.

#### City of Cartersville

- The city of Cartersville will experience significant population growth over the next 20 years.
- Population growth among specific demographic subgroups, such as school-age children, senior citizens and people with diverse ethnic backgrounds will necessitate increased efforts at service provision for these populations that are sensitive to the needs of those groups.

#### City of Emerson

✤ The city will experience high population growth rates over the next 20 years.

#### City of Euharlee

The city of Euharlee will continue to experience significant population growth over the next 20 years, although the rate of growth is not likely to match the growth rates experienced over the past three decades.

#### City of Kingston

At present, the city's potential for population growth is limited. Significant longterm growth will only occur if the city annexes adjacent land areas.

#### City of Taylorsville

The city does not anticipate significant population growth within its borders in the next 20 years. The city is content to retain its rural/agricultural character in the future.

#### City of White

The city does not expect significant population growth within its current borders. Significant long-term growth will only occur if the city annexes adjacent land areas.

# B. Economic Development

Bartow County and its respective cities have identified the following issues related to economic development in their jurisdictions:

#### Bartow County

- Bartow County actively works to promote and manage economic development within the county.
- The county must maintain a strong relationship with community groups working to expand the county's economic base.
- The county must continue to encourage the growth of commercial and retail business sectors.
- The county will work to expand job opportunities for it growing professional, higher-educated workforce.
- The county must continue to recruit new, growth-oriented industries to replace the loss of the industries that traditionally comprised a large percentage of the county's economic base.

- The county must encourage the expansion of educational and training opportunities for its workforce.
- The county must make sure that affordable housing is available at all income levels.
- The county must continue to invest in infrastructure improvements in order to successfully recruit new business and industry.
- ✤ The county must support clean industrial development.
- The county must develop a skilled workforce based on emerging and changing technologies.
- The county must examine current economic development policies and continue strategies that are successful, and adapt changes where needed.
- The county must encourage industrial development that provides jobs and revenue for all local governments and enhances school systems.

#### City of Adairsville

The city of Adairsville is satisfied with its current strategies related to economic development within the city.

#### City of Cartersville

- The city should develop neighborhood-based employment options in order to improve coordination between housing, transportation and employment.
- The city should promote neighborhood employment programs that encourage local businesses to hire from local neighborhood workforce in order to promote neighborhood growth and to foster communities with a degree of social capital and sense of place.
- ✤ The city should develop neighborhood business ownership programs.
- The city has several "spot areas" of slum and blight that need to be redeveloped in order to better attract economic development and increase tax revenue that may be used to provide enhanced living conditions for individuals of low and moderate income status.

#### City of Emerson

- The city currently does not offer enough job opportunities that would allow its citizens to live and work in their community.
- The city has large areas of vacant land that are suitable for commercial and industrial development.
- The city has the infrastructure (water, sewer, road, etc.) to support more economic development.

#### City of Euharlee

- The city must seek continued growth of the local economy and create more diversity among economic sectors.
- The city must support efforts to make sure its citizens have the requisite skills to take advantage of high-tech business and industry.
- The city needs to promote a better live-work environment for emerging businesses and cottage industries.
- ✤ The city must improve access to and from the city.
- The city must expand tourism by capitalizing on the city's cultural, historic and natural resources.

#### City of Kingston

- The city depends on a small number of businesses/industry types that make it vulnerable to downturns in those particular sectors.
- ✤ The city does not have an active business recruitment and retention program.
- Existing businesses in the city are not growing or expanding.
- The local economy does not compare well to peer communities.
- The city does not have a long-term infrastructure plan that guides, directs and supports development.
- There are limited economic development resources available to market the community.
- The community does not use innovative tools and marketing strategies to support and attract businesses.
- ✤ There is a lack of physical convenience and accessibility of jobs to workforce.
- The city lacks adequate infrastructure and other public facilities to attract new development where development is desired.
- Educational and workforce training are not readily available.
- Accessible and low-cost services to transport workers directly to job sites are not available.
- The city will have to explore annexation options in order to acquire sufficiently large parcels suitable for industrial, commercial and residential development.

#### City of Taylorsville

The site of an old cotton gin and warehouse is suitable for redevelopment. Otherwise, the city is satisfied with its current state of economic development and wishes to retain its rural village/agricultural character in the future.

#### City of White

- The city currently lacks sufficient jobs or economic opportunities for local residents.
- Increasing traffic, particularly from development outside of the city limits, along the Hwy. 411 intown corridor, will likely result in more commercial development along the corridor within the city.

# C. Natural and Cultural Resources

Bartow County and its respective cities have identified the following issues related to natural and cultural resources in their jurisdictions:

#### Bartow County

- New development is locating in areas that should not be developed such as farmland or environmentally sensitive areas.
- ✤ There is not enough greenspace or parkland.
- ✤ There are abandoned or contaminated properties in our community.
- ✤ Farmland and rural scenery are disappearing.
- ✤ It has environmental pollution problems.
- The county should systematically identify and inventory its natural and cultural resources and develop policies and long-range growth plans that protect these resources.
- The county should encourage the use of "best management practices" in future development projects.
- The county should identify and obtain adequate land for future park and recreation and green space needs.
- The county should be sensitive to natural and historic resources when planning future growth.
- The county should promote the sustainability of natural resources, especially water.
- The county must protect water resources from external threats to their use and quality.
- The county should develop a plan for the use of additional water resources based on the comprehensive plan.
- The county should promote eco-tourism that protects and is compatible with natural and historic resources.
- The county should create comprehensive plan policies that protect and encourage historic and cultural resources.

#### City of Adairsville

✤ There is not enough greenspace or parkland within the city limits.

#### City of Cartersville

- ✤ The city needs to develop an erosion and sedimentation control ordinance.
- The city needs to develop a conservation program for Urban Greenspace protection.

#### City of Emerson

→ There is not enough protected greenspace or parkland within the city limits.

#### City of Euharlee

The city must balance the need to expand and diversify its economic base with the need to protect the environmental quality of its natural resources, protect the integrity of its cultural and historical resources, and the desire to maintain an excellent quality of life.

#### City of Kingston

No issues identified.

#### City of Taylorsville

No issues identified. The relative lack of future development will continue to protect local natural resources.

#### City of White

No issues identified.

# D. Facilities and Services

Bartow County and its respective cities have identified the following issues related to public facilities and services in their jurisdictions:

#### Bartow County

- Some parts of the county are not adequately served by public facilities.
- Future growth will require increased investment in public services and facilities, including schools, public safety and emergency services, water, parks and recreation and other services.
- The county should develop long-term plans for financing the costs of public service expansion.
- The county should expand waste water systems to reduce reliance on septic tanks, especially near water resources.
- ✤ The county should upgrade existing water lines.
- The county should promote expansion of infrastructure into areas, as determined by the comprehensive plan, to protect natural resources.
- The county should support efforts crime prevention through community policing and Neighborhood Watch programs.
- The county should support strong partnerships between law enforcement and school systems.
- The county should support consistency in training of all public safety employees.
- The county should institute county-wide public safety initiatives through collaboration of fire departments, police departments, the sheriff's office and emergency services.
- The county should encourage developers to set aside land for green space, new schools, parks and other community facilities.
- The county should seek to build a new community center (with ample meeting space capacity) with revenue from the motel/hotel tax, if possible, or from other revenue.
- The county should increase the amount of, as well as upgrade, libraries, parks and recreation areas, community centers, trials, bicycle paths, etc.
- The county should promote community facilities that are compatible with the aging population and accessible by all citizens.
- The county should continue to support cooperation between Bartow County and the City of Cartersville on issues of countywide significance to children and their educational needs.
- The county should continue to explore ways of exploiting shared resources, including training opportunities.
- The county should encourage industrial development that provides jobs and revenues for all local governments and enhances school systems.
- The county should continue to target specific academic achievement goals that exceed national averages.
- The county should seek to provide a safe and secure environment for all children, both in their schools and their communities.
- The county should expand the range of creative and flexible educational opportunities for adults and children including more alternative schools and vocational education opportunities.

- The county should expand post-secondary educational opportunities by continuing to support the development of the new college campus.
- ✤ The county should enhance vocational-technical and adult education.
- The county should continue to support the improvement of existing facilities and the addition of new facilities as needed.
- The county should support programs to decrease dropout and teenage pregnancy rates.
- ✤ The county should support positive programs for youth.
- ✤ The county should continue strong programs for seniors.
- The county should support early development programs for children.
- ✤ The county should encourage development of affordable housing.
- The county should promote awareness, understanding and tolerance of cultural diversity.
- The county should reduce the amount of solid waste by increasing recyclables through increased public awareness.
- ✤ The county should continue to support the "Keep Bartow Beautiful" program.
- The county should explore new technologies for solid waste disposal.
- The county should encourage local industries to find alternative uses for scrap and solid waste materials.
- The county should continue to engage in cooperative discussions among the various local governments on service delivery issues, including the elimination of service duplication, and improvement of overall efficiency of service delivery.
- ✤ The county should seek to increase voter registration and turnout.
- The county should continue to pursue avenues for expanded public input on issues facing local governments.
- The county should explore benefits of consolidation of City and County government programs.
- The county should encourage the use and distribution of new technologies, such as fiber optics.

#### City of Adairsville

The city is satisfied with its current strategies related to public facilities and services, and is confident that it will be able to provide adequate services to future developments.

#### City of Cartersville

- The city's current park and recreation facilities and programs will have to be expanded in order to meet the needs of the growing population over the next 20 years.
- New fire stations will be required in order to meet the needs of the city's growing population.
- ✤ The city's police station will need to be expanded to meet future needs.
- The city needs to create a storm-water management ordinance to improve water quality and restore natural hydrology and to protect aquatic habitat.

- → Library facilities must be expanded to meet the needs of the growing population.
- The city must enhance the availability of and efficient delivery capacity for public water supply and distribution.
- The city will need upgraded public sewage collection and disposal.
- The city will need to enhance and develop its drainage/stormwater runoff infrastructure.

#### City of Emerson

No issues identified.

#### City of Euharlee

- The city must provide its residents and businesses with an adequate and timely supply of public water to meet the growth and development needs identified in the city's Comprehensive Plan.
- The city must develop sewerage and wastewater treatment systems that eliminate the need for individual septic tanks and drain field systems within the city.
- The city should seek to reduce the production of solid waste by promoting the recycling and reuse of materials throughout the city.
- The city must continue to coordinate efforts with Bartow County to ensure that adequate, cost-effective, convenient and healthful waste disposal is available to the City's businesses and its residents.
- The city seeks to provide the highest levels of professional police protection, fire protection and emergency medical services to ensure the safety and welfare of its residents and their property.
- The city must improve its library facilities, services and holdings to meet the needs of its current residents and the demands resulting from future growth.
- The city must improve facilities and services to better serve its current and future senior residents. The city projects that its current facility will reach its capacity by the year 2015.
- The city must improve its park and open-space system to satisfy the recreational and leisure-time needs of City residents and enhances the overall image and appearance of the community.
- The city must provide recreational programs to satisfy the needs of all age groups within the city.
- The city must maintain an efficient order of municipal services and an adequate array of community facilities in good condition to meet the changing needs of the community.
- The city seeks to provide street lights citywide to increase safety on City streets and within residential neighborhoods.
- The city will continue to work with Bartow County to provide its residents with schools and education programs to assure its citizens are well educated.

#### City of Kingston

- Septic systems in the downtown business district are failing, threatening economic development in that area.
- The city's inability to identify a suitable location for a second city well will require the city to pursue other means of securing an adequate water supply.

#### City of Taylorsville

✤ No issues identified. Current services are adequate for current and future needs.

#### City of White

- ✤ The city currently has only one full-time police officer (the police chief). All other officers are part-time. The city does not have "24/7" active duty officers.
- The city is in the final stages of expanding the capacity of its sewer system. It will soon have the opportunity to add more residential and commercial customers to its system.

# E. Housing

Bartow County and its respective cities have identified the following issues related to housing opportunities in their jurisdictions:

#### Bartow County

- ✤ Some neighborhoods are in need of revitalization or upgrade.
- Average house prices have increased significantly over the past 20 years and will continue to do so over the next 25 years.
- The county should encourage the development of affordable housing for all income groups.
- The county should identify existing structures that are suitable for conversion to affordable or subsidized housing.
- + The county should must identify areas that are suitable for housing revitalization.
- The county should encourage the development of affordable housing alternatives for its growing population of senior citizens.
- The county should encourage housing development that does not promote sprawl.
- The county should encourage programs that provide low-income residents the opportunity to obtain quality, affordable housing.
- The county should re-examine minimum housing code requirements with an eye towards higher standards.
- The county should encourage neighborhood improvement programs through organizations such as "Keep Bartow Beautiful," local garden clubs, homeowner associations, etc.
- The county should encourage the use of new technology (communication, energy, structural design, etc.) in construction.

#### City of Adairsville

- Some neighborhoods have parcels that are in need of revitalization or upgrade.
- ✤ There are significant amounts of housing in poor or dilapidated condition.

#### City of Cartersville

- The city lacks adequate housing options for its growing elderly population. Housing options need to be close to service providers.
- The city must improve affordable housing options for its low and moderate income residents.
- There are areas in the city where current housing units are in need of redevelopment or rehabilitation.
- Some areas of the city need safe and sanitary public housing.

#### City of Emerson

- There are residential areas where housing conditions are declining and in need of redevelopment.
- The community does not have varied housing options available to meet residents needs at all stages of life.

#### City of Euharlee

- The city must seek ways to increase the variety of housing opportunities available to its residents.
- The city must improve its infrastructure and facilitate the development of a safe living environment.
- ✤ The city must take steps to improve the overall appearance of its neighborhoods.
- ✤ There are some residential parcels in need of redevelopment.

#### City of Kingston

- → There is no mix of housing types in neighborhoods/new developments in the city.
- The city does not have varied housing options available to meet residents' needs at all stages of life.
- The city's neighborhoods do not have a healthy mix of uses, like corner groceries, barber shops, or drugstores within easy walking distance of residences.
- ✤ There is a lack of special needs housing in the city.
- There is no inventory of public and private land available for redevelopment of future housing.
- Existing structures suitable for conversion to affordable or subsidized housing are not being redeveloped.
- ✤ The city does not have a housing authority.
- ✤ The city does not have any community-organizations that provide housing.
- The city lacks maintenance, enforcement and rehabilitation programs; it lacks incentive programs for infill housing development; it does not have a home-buyer education program.

#### City of Taylorsville

No issues identified. The city is content to retain its rural/agricultural character. Current policies and strategies will allow it to do so.

#### City of White

No issues identified. Current housing patterns within the city are stable and not expected to change significantly in the foreseeable future.

### F. Land Use

Bartow County and its respective cities have identified the following issues related to land use in there jurisdictions:

#### Bartow County

- ✤ There are too many manufactured home or mobile home parks.
- There is no clear boundary where intown development stops and countryside begins.
- There is inadequate mix of uses (like corner groceries or drugstores) within neighborhoods.
- Long range land use plans must take preservation of natural and cultural resources into account.

- The county must be proactive in comparing current land use patterns to its longrange land use plan in order to identify problematic inconsistencies.
- The county must establish a comprehensive plan for allocating a minimum of 20% of land to green space.
- The county must develop compatible land use and zoning policies, especially in transitional zones between communities.
- ✤ The county must minimize incompatible adjacent land uses.
- The county must develop land use policies reflective of the availability of infrastructure and other public facilities.

#### City of Adairsville

- ✤ The city lacks enough venues for arts activities and performances.
- The city lacks a "center" that combines commercial, civic, cultural and recreational activities.
- There is typically neighborhood opposition to new/innovative or higher density developments.

#### City of Cartersville

- Develop an Underground Utility Ordinance to reduce visual impact of above ground utilities and to create usable open space in utility right of way in appropriate corridors.
- Allow utility right of way to be used as public open space (parks, greenspace, greenways, walking and bike trails).
- Adopt a stronger tree ordinance to protect specimen trees, conserve canopy cover promote multi-aged urban forest, mitigate urban heat island effect, and improve stormwater management.
- Update the Sign Ordinance to reduce visual impact of sign clutter, to create continuity in design throughout neighborhoods and to continue to foster the historical character and sense of place in the City.
- Develop an architectural and design ordinance for the Tennessee Street Corridor, and other appropriate character areas that are not currently protected. The purpose of such an ordinance would be to create continuity in design throughout a character area and to foster this character and sense of place.
- Density/height bonus or parking requirement reduction for meeting/public space development.
- Develop a Public Space Use Program to encourage use of public spaces for festivals, markets, parades, concerts and cultural events.
- The city shall continue to work with the North Towne Revitalization Task Force to develop a long range revitalization plan for that area.

#### City of Emerson

✤ No issues identified.

#### City of Euharlee

- The city should promote an urban growth pattern that occurs in an orderly fashion and conserves the land resources of the city.
- The city should encourage development that enhances and preserves established neighborhoods and promotes the historical character of the city and its rural community setting.
- ✤ The city must ensure that new development respects the natural environment.
- Commercial and industrial growth in the city should be concentrated in areas with suitable infrastructure.
- The city should identify areas suitable for annexation suitable for industrial and commercial development.

#### City of Kingston

✤ No issues identified.

#### City of Taylorsville

No issues identified.

#### City of White

✤ No issues identified.

# G. Transportation

Bartow County and its respective cities have identified the following general transportation issues in there jurisdictions:

#### Bartow County

- ✤ Transportation corridors are congested.
- People lack transportation choices for access to housing, jobs, services, goods, health care and recreation.

- Local trails are not linked with those in neighboring communities, the region and the state.
- The county should promote alternative forms of transportation such as Rideshare and light rail.
- The county should reduce traffic congestion by adopting zoning and land-use regulations that restrict growth to a level compatible with existing infrastructure.
- The county should reduce traffic congestion by making road improvements to reduce congestion and improve safety.
- The county should develop a long-term transportation model for all modes of transportation, including alternative forms that are pedestrian friendly, using compatible adjacent transportation corridors.
- The county should develop transportation facilities compatible with residential land uses.

#### City of Adairsville

✤ Transportation corridors are congested.

#### City of Cartersville

- Street improvement in older neighborhoods is heavily impacted by excessively narrow transit lanes, a lack of existing curbs and sidewalks, and poor provision for off-road parking, conditions that lead to vehicular congestion.
- In order to facilitate the expansion of the private sector job market within the community, specialized job training venues (perhaps through North Metro Technical College or the developing Floyd College campus) need to be developed and stress needs to be placed on the provision of adequate housing opportunities for low and moderate income individuals which are close enough to work sites that transportation to and from work is less of an obstacle.
- The city must continue to anticipate the needs of potential commercial/industrial residents by expanding existing infrastructure relative to industrial development and exploring avenues for the development of new or additional infrastructure designed to make the city more attractive to corporate citizens.

#### City of Euharlee

- ✤ The city needs to provide residents with transportation alternatives.
- Improvements to transportation infrastructure is needed to support current and future development.
- The city must seek to continually improve the transportation system to provide for the safe and efficient movement of people and goods within the City and between adjoining areas.

#### City of Emerson

- Traffic congestion will increase as residential and commercial development both within and outside of the city increases.
- The city is concerned about access issues and the impact of the planned Old Alabama Road Bypass on the northern end of the city. The city is concerned restrictive access to this road from city streets will deter economic development in the northern end of the city.
- Road conditions along Old Alabama Road between Puckett Road and Hwy. 41 are inadequate to handle the increased traffic flow that will occur with the development of the Carter Grove subdivision on Old Alabama Road west of Emerson.

#### City of Kingston

- The city is concerned about traffic congestion and safety issues at the intersection of Hardin Bridge Road and Hwy. 411. This intersection is not in the city, but Hardin Bridge Road is the main access point to Hwy. 411 for city residents.
- Traffic along Hardin Bridge Road will increase significantly with the development of the Kingston Park subdivision.
- City residents are dependent on automobiles to get to places, a condition which makes it difficult to easy what traffic congestion.
- The community is not pedestrian or bike friendly.
- ✤ The community does not have enough sidewalks and bike trails.

#### City of Taylorsville

No issues identified. Traffic along Hwy. 113 between Rockmart and eastern Bartow County may increase, but little opportunity exists for development along this corridor within the city limits.

#### City of White

Traffic along the Hwy. 411 intown corridor will increase as development along the highway, particularly outside the city limits, increases.

# H. Intergovernmental Coordination

#### Bartow County

Bartow County is satisfied with current intergovernmental coordination strategies and remains committed to cooperative efforts with other local governments to deal with issues of common concern.

#### City of Adairsville

The city is satisfied with current intergovernmental coordination strategies and remains committed to cooperative efforts with other local governments to deal with issues of common concern.

#### City of Cartersville

The city is satisfied with current intergovernmental coordination strategies and remains committed to cooperative efforts with other local governments to deal with issues of common concern.

#### City of Emerson

✤ No issues identified.

#### City of Euharlee

- The city is generally satisfied with current intergovernmental coordination strategies and remains committed to cooperative efforts with other local governments to deal with issues of common concern.
- The city would like a better understanding concerning respective hazard mitigation and emergency response responsibilites.

#### City of Kingston

The city is satisfied with current intergovernmental coordination strategies and remains committed to cooperative efforts with other local governments to deal with issues of common concern.

#### City of Taylorsville

No issues identified. The city is satisfied with current intergovernmental coordination strategies.

#### City of White

The city works well with other local governments and is currently satisfied with current intergovernmental coordination strategies. It remains committed to cooperative efforts with other local governments to deal with issues of common concern.

# II. Analysis of Existing Development Patterns

#### Land Use Patterns in Bartow County and the Respective Cities

The following land use categories are included on the existing land use maps:

**<u>Residential</u>**: A broad category that includes single family, multi-family dwelling units, including duplexes and manufactured housing.

**<u>Commercial</u>**: Includes service-oriented businesses, retail outlets, office space, etc.

Industrial: Includes manufacturing plants, factories, warehouses and similar entities.

#### Mining

<u>Multi-Use</u>: Includes tracts that encompass more than one of the designated land uses. For example, there are tracts in Cartersville that currently include commercial and residential uses.

#### Planned Development:

**<u>Public/Institutional</u>**: Includes government administrative buildings and public safety facilities, public schools, churches, cemeteries, libraries, etc.

**<u>Parks/Recreation</u>**: Includes public parks and other areas devoted to recreational usage, including greenspace.

<u>**Transportation/Communication/Utilities**</u>: Includes power plants, sewage and water treatment facilities, railroads, public transit stations, airports and port facilities, etc.

**<u>Rural/Agricultural</u>**: Includes areas devoted to farming, agribusiness, forestry and similar activities.

**<u>Vacant/Undeveloped</u>**: Includes land that has not been developed for specific purposes and serves as general pastureland or forest.

The table "Existing Land Use Percentages in Bartow County and Municipalities" provides a breakdown of existing land use across these categories for unincorporated Bartow County and the respective municipalities in terms of the percentage of total land mass devoted to each land use category.

| AREA                   | COUNTY | ADAIRS-<br>VILLE | CARTERS-<br>VILLE | EMERSON | EUHARLEE | KINGSTO<br>N | TAYLORS<br>-VILLE | WHITE |

#### EXISTING LAND USE IN BARTOW COUNTY AND MUNICIPALITIES

Source: Coosa Valley Regional Development Center

A brief description of current land use patterns in each entity follows.

#### Bartow County

(See "Existing Land Use – Bartow County" Map)

Two-thirds of the land in unincorporated Bartow County is currently designated as rural/agricultural. Just over one-fifth (22%) of the county's land is devoted to residential use. Residential development in unincorporated Bartow is predominantly located around the outskirts of Cartersville and in southeast Bartow; however, residential areas are beginning to develop in the central and northern areas of the county as well. Park and

recreational facilities make up 6.7% of the county's land area. In relative terms, the county has very little land devoted to industrial and commercial use.

#### Adairsville

(See "Existing Land Use – City of Adairsville" Map)

Adairsville is dominated by residential, commercial and industrial land use patterns. Most of the residential development is centered around the older historic downtown area, however new residential development is cropping up in the southern and eastern areas of the city. Commercial activity is located primarily along the Hwy. 41 and Hwy. 140 corridors, with a large commercial area set aside along I-75 in northeastern Adairsville. There is some commercial activity in the historic downtown area as well. Properties zoned for industrial development dominate the northern part of the city, particularly the areas north of Hwy. 140, although substantial segments of the industrial areas are not currently in use. Future land use needs may see much of this area redeveloped for commercial purposes.

#### Cartersville

(See "Existing Land Use – Cartersville, Georgia" Map)

Almost one-half (45%) of the existing land in the city of Cartersville is dedicated to residential housing. An additional one-fourth (23%) of the city's land is taken by industrial interests while commercial properties currently cover 9% of the city's area. Smaller percentages of the city's land area are devoted to multi-use development, mining, parks and recreational facilities and other uses.

#### Emerson

(See "Existing Land Use – Cartersville, Georgia" Map)

The vast majority (71%) of land within the city limits of Emerson are currently undeveloped or vacant. These areas include large swarths of land on either side of I-75 through the city. Residential development accounts for almost one-fourth (23%) of the city's land area. This includes the older residential development near the city's core as well as new residential developments along Hwy. 41 in the southern part of the city and off of Red Top Mountain Road in eastern Emerson. The city currently has very little commercial and industrial development.

#### Euharlee

(See "Existing Land Use - City of Euharlee, Georgia" Map)

Large parts of the city of Euharlee are currently rural or agricultural in nature (21%), or undeveloped (34%). Over one-third (36%) of the city's land is devoted to residential development. The area of industrial land use in the southern part of the city is a small segment of Georgia Power's Plant Bowen facility. Other types of land uses make up very small percentages of the city's total land area.

#### Kingston

(See "Existing Land Use – City of Kingston, Georgia" Map)

The vast majority (75%) of land in Kingston is currently undeveloped. An additional 18% of the city's land is dedicated to residential development, although that percentage will increase once a planned development in southern Kingston is established. The city currently has limited commercial development and no industrial development.

#### Taylorsville

(See "Existing Land Use – City of Taylorsville, Georgia" Map)

Taylorsville land use is predominantly (83%) dedicated to agricultural and rural interests. Most of the remaining land (13%) is taken by residential development. Taylorsville has few commercial properties and no industrial properties.

#### White

(See "Existing Land Use – City of White, Georgia" Map)

Bartow County Existing Land Use

City of Adairsville Existing Land Use

City of Cartersville Existing Land Use

The table below is a breakdown of the types of land uses within the City, annual annexation acreages, the percentage of each land use and the estimated square feet of developed property.

| Land Uses Within Cartersville               |            |            |            |  |  |  |  |  |  |
|---|------------|------------|------------|--|--|--|--|--|--|
|   | 2003       | 2004       | 2005       |  |  |  |  |  |  |

# IV. Character Areas

### Bartow County

The following Character Areas have been identified within unincorporated Bartow County:

**Historic Area**: The Etowah Valley Historic District, as defined by Bartow County Zoning Ordinance 7.17.1, was created "...to provide for the identification of and protection of historical and cultural artifacts and sacred locations of the Muscogee (Creek) Nation and the Eastern Band of the Cherokee Nation." The district was created primarily to protect archeological resources within the district; very few homes exist within the district. The district is a creation of Bartow County; areas within the district annexed into one of the incorporated cities no longer fall under the protection of county regulations.

*Development Strategy*: Parties wishing to develop property within the district must conduct an archeological survey of the area, as defined and approved by Bartow County Zoning regulations; only low density development (2 acre minimum lot size) is allowed. Developers must comply with all state and federal regulations related to preservation/disturbance of archeologically significant sites.

**Residential Suburban Area - Built Out**: Residential areas located east of I-75 and south of Highway 20 on northern edges of Lake Allatoona. The area is characterized primarily by single-family homes (with a handful of multi-family dwellings) on lots of varying sizes.

*Development Strategy*: The character of this area is not likely to change in the near future. This area was developed before zoning ordinances were implemented by the county, resulting in a wide variety of lot sizes. Older, well-kept neighborhoods predominate. The area is generally well landscaped with some natural settings. Some commercial establishments (gas, groceries, restaurants, etc.)exist along Highway 20, the northern border of this area. Infill development is not encouraged in this area as it would serve to destroy the area's current character. Little new development is likely.

**Residential Suburban Area – Developing**: Largest area of residential character, which includes large portions of the central part of the county stretching from Cartersville north to the outskirts of Adairsville. Also includes strips of developing residential area between Adairsville and White, and from White north to Pine Log. Area also includes development east of I-75 along Highway 140. Characterized primarily by single-family housing units.

*Development Strategy*: Acceptable minimum lot sizes in this area varies depending on presence of sewer facilities. Minimum lot size for development connected to a sewer

system is 15,000 sq. ft. Minimum lot size for development on septic is 26,000 sq. ft.. New planned developments require sidewalks, preservation of trees in natural areas, including individual lots. Conservation subdivision ordinances allow for higher density development with set-asides; 50% of the land must be designated for greenspace. Greenspace set-asides are encouraged even in developments not specifically designated as conservation subdivisions. Number of units in permitted developments is typically small when compared to developments in other metro-Atlanta communities. Limited commercial development is allowed. Multiple access outlets to local roads may be required depending on number of housing units in development. Due to the scale of these areas across the county, many developments may not be near local schools. Much of the land within this character area will remain rural in nature due to lack of infrastructure, particularly the lack of sewer lines. The county does not encourage development where infrastructure is lacking. It uses strategic placement of infrastructure as a growth management tool.

**Residential Traditional Neighborhood – Declining**: Southeastern corner of county centered around Allatoona Elementary School. The area falls generally east of I-75 and south of Lake Allatoona. In the early 1980s, numerous mobile home parks/subdivisions were established in this area. Most of these dwellings were well maintained under the original owners. Over time, these properties were converted into rental units and significant decline in the maintenance of these residences has occurred. This area could be categorized as "blighted" due to the poor condition of many of these dwellings.

*Development Strategy*: The county, through zoning enforcement efforts, has worked with neighborhood groups to clean up some properties and rid them of accumulated debris. Significant redevelopment is likely to occur in the next 20 years due to proximity to other developing areas in Cobb County and along the I-75 and U.S. 41 corridors.

**Rural Residential**: Includes areas along the western edge of the county from Taylorsville north to an area west of Adairsville. Also includes large areas in northeast part of county east of I-75.

*Development Strategy*: These areas are identified in Bartow County's Growth Management Plan as areas that should remain rural in nature. The areas contain much open space and farmland. Residential development is limited to larger lot sizes (2 acre minimum). Only limited infrastructure will be made available in the future to discourage excessive residential development.

**Rural Village**: The Cassville community, which originally served as Bartow County's seat of government, is an unincorporated rural village having developed as a focal point for mercantile activity at the community's focal crossroad. The area includes traditional neighborhood features, local schools and parks. Numerous historic structures exist in the community, the preservation of which will be encouraged.

*Development Strategy*: Significant residential development has occurred near the village which further heightens the village as a focal point for the area. The development of

pedestrian friendly transportation, including bicycle and walking paths, to the village will enhance the quality of rural village atmosphere.

**Agriculture**: Includes: area northeast of Taylorsville; area north of Euharlee; area in far northwestern section of county bordering Floyd County, and area in eastern portion of county between Lake Allatoona and Pine Log Wildlife Management Area.

*Development Strategy*: Bartow County recognizes the need to preserve agricultural land even though it is rapidly growing community. The agricultural area in the eastern part of the county is owned by one family that is committed to preserving the agricultural character of this area. Development in other agricultural areas is limited to 5+ acres minimum lot size. The county's Growth Management Plan does not provide for infrastructure to be extended to these areas in the future in order to discourage development. Through its greenspace program, the county encourages the creation of conservation easements which severely restrict development of parcels of land in perpetuity.

**Crossroad Communities**: Includes the communities of Stilesboro, Pine Log and Rydal. These communities are not characterized as villages due to the lack of significant residential and commercial development, but have some similar characteristics and remain focal areas for farms and homesteads in these rural areas. These areas formally had more significance for local residents with some mercantile activity.

*Development Strategy*: The potential for these areas to revitalize as viable commercial crossroads will increase as residential development occurs nearby. It is possible these communities might obtain village status again at some future point.

**Barnsley Gardens Resort Area**: Barnsley Gardens is a high-end resort area that includes a significant archeological site preserved under private ownership. The resort area includes a golf course and rental lodging that target tourists.

**Conservation Areas**: Includes the Pine Log Wildlife Management Area; Lake Allatoona and the adjacent federally owned land areas managed by the U.S. Corps of Engineers; and county-owned greenspace areas protected by permanent covenant as defined by the Georgia Greenspace Act. County greenspace areas are primarily natural-setting areas with limited passive recreational opportunities (walking trails; some bicycle/mountain bike paths; picnic tables, etc.)

**Major Highway Corridors**: Includes the following corridors: I-75; Hwy. 41; Hwy. 411 south to Rome; Hwy. 20 east to Canton; Hwy. 113; Hwy. 61; and Old Alabama Road, including the planned Emerson Bypass. Setback requirements along these highways vary according to the zoning classification of the adjoining properties. County signage regulations apply along these routes as they would along other county roads. Design characteristics along these routes (with the current exception of Old Alabama Road), including medians and access issues, are controlled by the Georgia Department of

Transportation. Old Alabama Road will become part of the GA Hwy. 113 corridor in the near future and will come under DOT control as well.

**Scenic Corridors**: Includes the following corridors: Hwy. 411 north from White to the Gordon County line, and Hwy. 140. Highway 411 north to the Gordon County line has been designated as a scenic highway by the Ga. DOT. It passes through one of the most scenic areas of the county. Highway 140 runs east-west near the northern border of Bartow County and is one of Georgia's most scenic routes. Considerable development has occurred along this highway in other eastern counties, but the highway remains predominantly rural/scenic through Bartow County. Protection of its "viewshed" should be encouraged. Large parts of the highway run through rural residential character areas which will discourage high density residential development along these stretches. The county's Beazley Gap greenspace area lies along the eastern end of this corridor in Bartow County.

Bartow County Character Area Map

### City of Adairsville

The following Character Areas have been identified in the City of Adairsville:

**Downtown Historic District**: Area in heart of city including most of the residential areas west of Hwy. 41 as well as the downtown business district centered around the Public Square. This area is formally recognized as an historic district by the National Register of Historic Places.

*Development Strategy*: Commercial development is restricted to small businesses. Applications for new construction and renovation to existing structures must be reviewed by the Adairsville Historical Committee to ensure consistency with historical architecture of the area.

**Downtown Business District**: Area bordered by Old Dixie Highway, College St., Chestnut St., and the railroad tracks. Contains mostly small retail/commercial businesses, with some loft living available. This area falls within the Downtown Historic District (see above).

*Development Strategy*: Same as for Historic District. Commercial development is restricted to small businesses. Applications for new construction and renovation to existing structures must be reviewed by the Adairsville Historical Committee to ensure consistency with historical architecture of the area.

**Residential Traditional Neighborhood – Stable**: Includes older, predominantly singlefamily housing surrounding the downtown business district. Much of this area is within the Downtown Historic District. Area contains a few individual properties that are in need of redevelopment.

*Development Strategy*: Same as for Historic District. Commercial development is restricted to small businesses. Applications for new construction and renovation to existing structures must be reviewed by the Adairsville Historical Committee to ensure consistency with historical architecture of the area.

**Residential Suburban Area – Built Out**: Includes single family residential development between Hwy. 41 and I-75, and area in northeastern corner of city north of Hwy. 140 and east of I-75. Both areas are characterized by new single-family homes.

*Development Strategy*: Requirements include minimum lot sizes of 15,000 sq. ft. Subdivision ordinances provide set-asides for greenspace; sidewalks within subdivisions. Pedestrian friendly.

**Residential Suburban Area – Developing**: Developing residential areas in southeastern part of city just west of I-75. Will be characterized by single family residences.

*Development Strategy*: Same as Built Out. Requirements include minimum lot sizes of 15,000 sq. ft. Subdivision ordinances provide set-asides for greenspace; sidewalks within subdivisions. Pedestrian friendly.

**Urban Village/Neighborhood Center**: Mixed-use developments ("Adares" and "The Village of Anne Marie") on Hwy. 140 east of I-75. Includes residential and retail development; pedestrian friendly.

*Development Strategy*: Requirements include minimum lot sizes of 15,000 sq. ft. Subdivision ordinances provide set-asides for greenspace; sidewalks within subdivisions. Pedestrian friendly access to retail establishments.

**Industrial Areas**: Includes light and general industrial areas around city. Large industrial area in north central part of city is currently vacant.

*Development Strategy*: Private covenants restrict types of buildings that can be built. Raised concrete foundations and sidewalks required. The city expects that part of industrial area in north central part of city will be rezoned commercial to accommodate Cabela's retail complex that will be coming to area.

**Commercial**: Commercial areas located primarily along major highway corridors (see below).

**Major Highway Corridors**: Includes Hwy. 41 and Hwy. 140 corridors. Significant commercial and industrial development exists along these corridors.

*Development Strategy*: Existence of city sewer and other infrastructure support future commercial and industrial growth along these corridors. The city works with the local development authority and other related groups to recruit business and industry to these areas.

City of Adairsville Character Area Map

## City of Cartersville

The City of Cartersville has identified the following Character Areas within its borders:

#### Natural Conservation

Some of the areas within this character area include: undeveloped, natural lands with significant natural features, including views, steep slopes, flood plains, wetlands, watersheds, wildlife management areas, conservation areas and other environmentally sensitive areas not suitable for development of any kind. Scenic Corridors are developed or undeveloped land paralleling the route of a major thoroughfare that has significant natural, historic or cultural features, and scenic or pastoral views.

Development strategies for this area include:

- Maintain natural, rural character by not allowing any new development and promoting use of conservation easements;
- Widen roadways in these areas only when absolutely necessary and carefully design the roadway alterations to minimize visual impact;
- ✤ Promote these areas as passive-use tourism and recreation designations;
- Establish guidelines on development to protect the characteristics deemed to have scenic value, including landscaping and architectural design; and
- Provide pedestrian linkages to adjacent and nearby residential or commercial districts.

#### **Country Estates**

Areas within this character area are lands that are undeveloped or underdeveloped but rarely in commercial agricultural production, or have been developed as "estate farms" or large-lot subdivisions. The intent of the Country Estates Character Area is to provide a low-intensity residential community, augmented with limited non-production agricultural activities such as horse farms and riding stables, while accommodating lowintensity residential growth.

Development strategies for this area include:

- ✤ Retain and conserve the low-intensity character in the area;
- Encourage personal and recreation-oriented "agricultural" uses such as home gardens, horse farms and riding stables, "boutique farms;"
- Discourage production-oriented agricultural activities such as major cash-crop cultivation and animal production (including cattle, sheep, swine, and poultry broilers or eggs);

- Restrict new development to large-lot development or conservation subdivisions; and
- Encourage and accommodate the further development of existing estates and mini-farms that is consistent with growth policies of the City and that blend into the overall fabric of the City.

#### Suburban Living

As Cartersville continues to experience growth in both residential and commercial development, more and more areas will experience growth pressure for the typical types of suburban residential subdivision development. This character area is located in areas where this pressure is the greatest due to adjacency and current or proposed community infrastructure such as sewer and water and adjacent land use. This character area also includes older established suburban neighborhoods and areas adjacent to established neighborhoods. Characterized by low pedestrian orientation, little or no transit, large lots, high to moderate degree of building separation, predominately residential with scattered civic buildings and varied street patterns, often curvilinear. Water and sewer are either existing or planned within this character area.

The intent of this character area is to channel growth pressures to areas that are suitable in terms of land use patterns and infrastructure investment, and to areas that have a more "suburban" feel. Without intervention, these areas are likely to evolve with low pedestrian orientation, little or no alternative transportation options, high to moderate degree of building separation, predominantly residential development with scattered civic buildings and varied non-connecting street patterns, often curvilinear.

Development strategies for this character area include:

- ✤ Retain and conserve the existing sound housing stock;
- Promote residential development that fosters a sense of community and provides essential mobility, recreation and open space;
- Create Master planned development blending residential development with schools, parks, and recreation, linked in a compact pattern that encourages walking and minimizes the need for auto trips within the subdivision;
- Provide a strong base of coordination with existing and proposed infrastructure and adjacent land uses;
- Provide good vehicular and pedestrian/bike connections to retail/commercial services as well as internal street connectivity, connectivity to adjacent properties/subdivisions, and multiple site access points including street design that fosters such pedestrian orientation;
- ✤ Whenever possible connect to regional network of green space and trails, available to pedestrians, bicyclists, and equestrians for both tourism and recreational purposes; and

- ✤ Assure compatibility of infill development with surrounding neighborhoods;
- Create neighborhood focal points by locating schools, community centers, or well-designed small commercial activity centers at suitable locations within walking distance of residences;
- Provide for areas of innovative development, such as golf, master planned and traditional communities in appropriate locations.

Neotraditional Neighborhood Villages includes the following developments:

Carter Grove Planned Development Dellinger Planned Development Upper Aubery Lake

Development strategies for this area include:

- Promote TND style residential subdivisions with a strong level of connectivity;
- Create live, work; and play communities blending residential development with schools, parks, and recreation, linked in a compact pattern that encourages walking and offer transportation alternatives and minimizes the need for auto trips.
- ✤ Provide a strong base of coordination with existing and proposed infrastructure;
- Provide good vehicular and pedestrian/bike connections to retail/commercial services as well as internal street connectivity, connectivity to adjacent properties/subdivisions, and multiple site access points;
- Whenever possible connect to regional network of green space and trails, available to pedestrians, bicyclists, and equestrians for both tourism and recreational purposes

#### Neighborhood Living

These neighborhoods have relatively well-maintained housing, posses a distinct community identity through architectural style; lot and street design and have good rates of homeownership. The intent of this character area is to protect existing moderate density single-family neighborhoods through focusing on reinforcing stability by encouraging more homeownership and maintenance or upgrade of existing properties. The interior of these neighborhoods will remain single family residential on sewered lots, relying on nearby neighborhood commercial for services. Infill or redevelopment of parcels within this neighborhood will provide greater lifestyle housing choices, but should be compatible with the character area as a whole. Sensitivity to surrounding residences in terms of light, bulk, setbacks, landscaping and mass should be reviewed. This character area is also appropriate within for developing neighborhoods at moderate densities.

Development strategies for this character area include:

- Allow for the conversion of sites to more intensive residential use, such as townhouses and patio homes when appropriate;
- ✤ Allow smaller lot development with higher densities;
- Encourage locating residential development where full urban services, public facilities, and alternative transportation are available;
- Permit, in certain sections of the city, multi-family housing developments that are consistent with growth policies of the City and which blend into the overall fabric of the County; and
- Develop residential areas that utilize innovative urban design principles to encourage community, pedestrian linkages and mixed-use environments.

#### Historic Neighborhood Includes the following neighborhoods:

Olde Town Historic District West End Historic District North Town Revitalization Area Atco Historic Mill Village

Residential areas in older parts of the community typically developed prior to WWII. Characteristics include high pedestrian orientation, sidewalks, street trees, and street furniture; on-street parking, small regular lots, limited open space, buildings close to or at the front property line, predominance of alleys, low degree of building separation, neighborhood-scale businesses scattered throughout the area. These older neighborhoods should be encouraged to maintain their original character, with only compatible infill development permitted. There are three types of traditional neighborhoods that each calls for their own redevelopment strategies: Stable, declining and redevelopment. Primary features of this character area include:

- Stable: A historic neighborhood having relatively well maintained housing, possessing a distinct identity through architectural style, lot and street design, and having higher rates of homeownership. Location near declining areas of town may cause this neighborhood to decline over time.
- Declining: An historic neighborhood area that has most of its original housing stock in place, although housing conditions are worsening due to low rates of homeownership and neglect of property maintenance. There may be a lack of neighborhood identity and gradual invasion of different type and intensities of use that may not be compatible with the neighborhood residential use.
- Redevelopment Area: A neighborhood that has declined sufficiently that housing conditions are bad, there may be large areas of vacant land or deteriorating, unoccupied structures.

#### Urban Living

Urban Living Character Areas consist of higher density mix of uses and mixed-use building types that accommodate retail, offices, small lot single family, townhouses and apartment complexes. Urban living character areas commonly surround urban cores and provide a transition between the core and lower intensity residential character areas. An urban living character area is a focal point for several neighborhoods, and is usually accessible by pedestrians.

Development strategies for this character area include:

- Allow for the conversion of sites to more intensive residential use when appropriate;
- Ensure compatibility between established single family and newer medium and high density development;
- Encourage locating residential development and neighborhood commercial where full urban services, public facilities, and routes of public transportation are available: and
- Develop residential areas that utilize innovative urban design principles that encourage community, pedestrian linkages and mixed-use environments.

#### Transitional Corridor:

Areas suitable for designation as Transitional Corridors are those major roadways originally developed for single-family homes that have or will become impacted by adjacent multi-laned thoroughfares improvements and commercial encroachment, and, that may no longer be suitable primarily for residential use. In the past, individual properties have been rezoned and converted in a way that has often been disruptive from an urban design sense: parking lots have replaced front lawns; houses have been remodeled unprofessionally, resulting in structures with incoherent design elements; signage has often been out of proportion to the structure and use advertised. In order to propose an orderly, safe and aesthetic transition, properties within designated transitional corridors can be considered for nonresidential use at intensity compatible with surrounding residential areas and that maintain the essential residential "look and feel" of the area. Designation of this corridor is meant to encourage public and private investment that will promote vitality, activity and safety in the area by controlling aesthetics, careful site planning and limiting nonresidential uses to those that will not overly impact existing residential neighborhoods adjacent to the site.

#### Development Corridor (transitional activity center-change):

Includes the following corridors:

Highway 41 High Technology Corridor (Canyon Overlook)

#### Interchange Village

Development Corridor Character Areas extend along major thoroughfares that have or are experiencing major development of retail, office or industrial land uses and higher density housing, including mixed-use developments, and include redevelopment of aging mixed-use areas.

This Character Area is envisioned as destinations for expanded interstate trade opportunities, small business opportunities and would accommodate higher density: single and multi-family in order to create a synergy between retail, office, industry, other commercial uses and surrounding residential development. Development of a wide range of housing choices can be important to ensuring the viability of these corridors. These land use components will coexist as part of a collective approach to creating communities that are safe, attractive and convenient for pedestrians and motorists alike. The purpose of this character area is the creation of an inviting commercial and mixeduse area. "How does my particular building work on the street, and what elements can I add to create an inviting and pleasant environment." From an urban design standpoint, the most critical element in creating a visually appealing mixed-use corridor is the enforcement of appropriate development standards to ensure adequate site plans and landscaping. Buffers are critical between incompatible uses and guidelines that address signage and lighting will help to mitigate the negative impacts of a high concentration of commercial uses.

Buildings will be designed to conform to architectural standards and oriented in close proximity to each other to facilitate walking instead of driving. For a retrofit to be successful, the public right-of-way, the adjacent land uses and the interface between the two should be addressed comprehensively. Urban design features such as lighting; coordinated signage; street furniture and landscaping are used as visual cues that create a recognizable character for the area. Design factors fostering community commercial including limitation of size of commercial development in terms of square footage; design parameters for parking and internal circulation/access, recommended facade treatments, building setbacks, siting and orientation; buffer requirements to ensure compatibility with adjacent single-family residential; and other factors which promote pedestrian-friendly, movements are important considerations. Anticipated land uses will provide commercial and services support to the community as a whole on a larger scale than a neighborhood node, yet the square footage size restriction and required design parameters will retain a village commercial feel as opposed to creating a regional draw. Development Corridor regulations will promote specialized planned commercial development standards and requirements limiting the types of uses permitted by regulating the square footage allowed; establishing pedestrian oriented setbacks and parking lot layouts; specifying site layout and building orientation; recommending design features such as facade treatments, landscaping and streetscape elements; and instituting buffer requirements to protect the residential uses behind the corridor. Development strategies within this character area include:

Focus development in villages, urban centers or compact activity centers.

- Provide for mixed uses and higher densities than surrounding areas in the growth center;
- Redesign existing strip development into pedestrian scale, interconnected nodes.
- Plan for a community street network that is as friendly to alternative modes of transportation as to the automobile.
- Require master planning to address access management;
- ✤ Plan and design transportation improvements that fit with community character.

The overall goal of this character area is to provide, through transportation, land use and streetscape projects and other physical enhancements to make this corridor environment a distinctive "place" not merely a roadway.

#### Neighborhood Village Center

Neighborhood village centers are places where small-scaled commercial uses, such as a bank, grocery store, drug store, cleaner, and gas station, are arranged in a village-like setting that might include a neighborhood park, pedestrian circulation and public spaces. A neighborhood village center is envisioned as a compact assortment of convenience–oriented retail stores and services to address the demands of nearby residents. From an urban design perspective, sidewalks are important circulation features in neighborhood village centers, but even more important is the scale of the roads that serve these areas. Given its small scale and emphasis on small stores, a Neighborhood Village Center would be overwhelmed by wide thoroughfares carrying high-speed traffic and instead should rely on more modestly scaled roadways and tree-lined streets. Adaptive re-use of existing structures and buildings is encouraged as a focal point.

#### Community Village Center (Civic Village)

Typically located at the convergence of major transportation corridors, Commercial Village Centers are envisioned as places where a compatible mixture of higher intensity uses are located, such as larger scaled shopping centers, professional offices and services. Mixed-use developments that combine residential, commercial, service and recreational uses integrated and linked together by a comprehensive circulation system are encouraged in these areas. Community village centers include shopping and service facilities that offer a wide variety of goods and services, including both convenience goods for neighborhood residents and shopping goods for a market area consisting of several neighborhoods. Whereas someone might live near a neighborhood village center but work outside the city, the commercial village concept includes a variety of employment opportunities, businesses, office, retail shops, services, well-placed parks, plazas and open spaces and potential higher density housing that create a community where it is possible to live, work and play. Land use components coexist as part of a collective approach to creating communities that are safe, attractive, and convenient for pedestrians and motorists alike. A community village center should create a focal point for its surrounding neighborhoods.

#### **Regional Activity Center**

This character area is a concentration of regionally-marketed businesses and retail centers, "big box" commercial uses, office and employment areas, higher-education facilities, sports and recreational complexes. These areas are characterized by high degree of access by vehicular traffic, and potential transit use, including stops, shelters and transfer points; on-site parking; low degree of internal open space; high floor-area-ratio; large tracts of land, in campus or unified developments.

#### Urban Core

An urban core character area generally consists of the highest density development and provides for the widest range of mixed uses in its general area, combined with central civic areas such as City Halls. Though differing in scale and intensity, such areas include:

#### **Downtown Business Historic District**

The historic "Olde Towne" is the heart of the city of Cartersville, and includes the city's municipal facilities, streetscape with brick paved sidewalks and decorative lighting, the city park, historic buildings dating back to 1879 and adjacent historic neighborhoods. Vacant land and underutilized parcels within the study area provide opportunities for new pedestrian-oriented mixed use development or redevelopment. Nearby creeks and recreational facilities provide alternative transportation and recreation options. In addition, the Railroad parallels Main Street, defining the downtown area, and provides future entertainment and community opportunities.

Primary features of this character area include:

- Increase transportation accessibility and mobility options and improve traffic flow in and around the downtown area;
- Expand and strengthen the downtown by building on its current successes and small-town atmosphere; and
- Increase the viability of live, work, and entertainment choices within the downtown area.

#### Highway Business Corridor

The character area is a specially designated corridor to encompass an existing working commercial and light industrial corridor that will be going through transitional use and continued development as transportation improvements are made. Mixed-use developments incorporating commercial and office uses front major commercial corridors of the community, and light industrial are located along major thoroughfares. This Character Area relies on major transportation access, particularly from interstates or major arterials, including rail access. Similarly, the provision of adequate public services in the form of water, sewer, and power are critical to the functionality of these areas. This corridor is intended to create a pleasant, hazard-and-nuisance-free environment and does

not create either appreciable nuisance or hazard to other property, individuals, or the public in general. The purpose of this corridor is the creation of an inviting commercial and mixed-use area.

Highway business corridor character areas are envisioned as destinations for expanded highway-oriented trade opportunities, small business opportunities, and would accommodate higher densities in order to create a synergy between retail, office, industry, and other commercial uses. The intent this character area is to provide a variety of tracts for heavy commercial uses, light industrial and employment uses such as office and business parks, distribution/service, light industrial, auto repair and services, high-technology and research, wholesaling companies and similar businesses that have no significant impacts on the environment.

From an urban design standpoint, the most critical element in creating a visually appealing corridor is the enforcement of appropriate development standards to ensure adequate site plans and landscaping. Buffers are critical between incompatible uses and guidelines that address outdoor signage, sound and lighting will help to mitigate the negative impacts of a high heavy concentration of commercial uses.

#### Workplace Center

Considered major employment centers utilizing a mixture of manufacturing, warehousing, wholesale, commercial, office and some high-intensity residential uses, these character areas are located relative to major transportation connections. Internal housing would provide a customer base for offices, cafés, restaurants, and retail uses located on the corridor, and also enhance the safety of the area by maintaining a continuous population base in a location that is typically unpopulated in the evening hours.

### City of Cartersville Character Areas Map

City of Emerson

The following Character Areas have been identified within the City of Emerson:

**Public/Institutional**: Includes government and public safety/service facilities, schools, churches, etc.

**Residential Traditional Neighborhood – Stable**: Includes residential neighborhood between Hwy. 293 and Hwy. 41 bisected by Gaston Westbrook Drive. Primarily single-family homes.

*Development Strategy*: This area is already well developed. Housing is in generally good condition. Little growth is expected in this area.

**Residential Traditional Neighborhood – Declining**: Includes oldest residential dwellings in areas west of Hwy. 293 and north of 7<sup>th</sup> Street. The area includes some mobile homes and numerous single-family homes that are in need of renovation/redevelopment.

Development Strategy: The city will work with groups seeking to redevelop these areas.

**Residential Suburban Area – Developing**: Includes areas on south side of city along between Hwy. 293 south and I-75, as well as areas east of I-75 from Allatoona Road to Red Top Mountain Road.

*Development Strategy*: Availability of infrastructure is pushing development in these areas. Developments must adhere to standard ordinance requirements re: lot size, sidewalks, set-asides, etc.

**Commercial**: Includes large area (currently undeveloped) on south side of Hwy. 293 connector and I-75. The city anticipates that a number of retail/commercial establishments will locate here as future surrounding residential development starts to occur. Large commercial areas (much of which is still undeveloped) also exist between I-75 and Hwy. 41 in north-central part of the city, and along Hwy. 293 in northern Emerson.

**Industrial**: Large areas zoned for industrial use exist along a strip north of the Hwy. 293 connector between I-75 and Hwy. 41. Other industrial areas also exist along northern stretches of Hwy. 41 and Hwy. 293.

Major Highway Corridors: Includes I-75; Hwy. 41, and Hwy. 293.

Vacant/Undeveloped: Includes parcels of land on periphery of city limits.

### City of Emerson Character Areas Map

#### City of Euharlee

The following Character Areas were identified within the City of Euharlee:

**Public/Institutional**: Includes government and public safety/service parcels; schools; churches, etc.

**Historic District**: City core including Covered Bridge and Museum and other historic buildings, including a general store and old library. The area contains few residential dwellings; some former residential dwellings have been converted to small commercial establishments.

*Development Strategy*: Opportunities for future development is limited. The city's primary focus for this area is the preservation of its historic character.

**Residential Suburban Area – Developing**: Includes last phases of Shaw Woods subdivision in northeastern part of city which is made up exclusively of single-family homes; also a large area in southwestern part of city.

*Development Strategy*: Lack of sewerage infrastructure, minimum lot size requirements and conservation subdivision ordinance will limit density of developing subdivisions.

**Residential Suburban Area – Built Out**: Established subdivisions on all sides of city. Single family homes in areas that have little room left for new development.

*Development Strategy*: These neighborhoods are well established with little opportunity for new development or infill development.

**Agricultural**: Large agricultural tract on northwestern edge of city that includes pasture and woodlands. Also includes a tract in southeastern area of city along Etowah River and Milam Bridge Road.

**Commercial**: Includes limited low density commercial parcels in core of city; small commercial parcels along eastern portion of Euharlee Road; undeveloped commercial area bordered by Euharlee Road, Hardin Bridge Road and Cliff Nelson Road in northwest area of city.

*Development Strategy*: Lack of sewer infrastructure limits the types of commercial establishments that can locate in Euharlee.

**Industrial**: Includes small industrial area along southern border of city. Portions of this land fall within Georgia Power's Plant Bowen facility.

*Development Strategy*: Current lack of adequate infrastructure will limit industrial development.

**Conservation Area**: Narrow strips of land along both sides of Etowah River north of Euharlee Road donated to City by former owner.

*Development Strategy*: Area will remain in natural state. Established residential subdivisions along periphery of this area prevent any future development.

**Public Utility**: Includes parcels with public utility facilities (power lines; substations, etc.).

City of Euharlee Character Areas Map

#### City of Kingston

The following Character Areas have been identified with the City of Kingston:

**Public/Institutional**: Includes government buildings, public safety facilities, churches, etc.

**Downtown Business District**: A small, one-block commercial area bordered by Railroad St., Bradley Lane, Kitchen's Alley and Church St.

*Development Strategy*: The old septic system in downtown area is failing, which has been causing problems for commercial establishments in this area, particularly a diner. The city has received a U.S.D.A. Rural Business Enterprise Grant to build a sewer system for the downtown area only. This system must be installed by 2008.

**Residential Traditional Neighborhood – Stable**: Older, single-family housing area around city core. The area includes a few individual parcels in need of redevelopment.

*Development Strategy*: These neighborhoods are well established. There is some opportunity for redevelopment of individual parcels.

**Residential Suburban Area – Developing**: Single family housing subdivision (Kingston Park) being developed along Harbin Bridge Road.

Development Strategy: One-half of land to be given to city for greenspace.

**Commercial**: Small individual parcels along Hwy. 293, Reynolds Bridge Road and other scattered areas. Also includes a larger undeveloped tract between the new Kingston Park subdivision and Hwy. 411.

Development Strategy: Some restrictions on type of commercial establishments that can be located along Reynolds Bridge Road. Otherwise, there are no restrictions on types of commercial development beyond limitations presented by lack of sewer infrastructure. City of Kingston Character Areas Map

#### City of Taylorsville

The following Character Areas have been identified in the City of Taylorsville:

**Public/Institutional**: Government buildings and public safety facilities; public schools; churches, cemeteries, etc.

**Residential Traditional Neighborhood – Stable**: Older single family housing around city core. Most homes are in good condition.

*Development Strategy*: There is little opportunity for new development in these areas. These well-maintained homes are on relatively large lots with little opportunity for infill or redevelopment.

**Rural Village**: Small area around city's main intersection, including a few small commercial establishments.

*Development Strategy*: This area will see limited growth in upcoming years. Development strategies, including minimum lot size requirements, seek to maintain the rural character of the area. Lack of infrastructure also will limit growth.

Commercial: Limited commercial establishments along Hwy. 113 and side streets.

*Development Strategy*: Commercial establishments will be limited by lack of sewer availability and low residential density.

**Agricultural**: Large tracts of land within city limits are devoted to agriculture, including land devoted to farming, pasture land, and forested areas.

*Development Strategy*: Significant percentages of these agricultural areas are owned by a small number of families who have no plans to develop these properties.

Vacant: Small open field west of Church St. and south of the railroad tracks.

#### City of Taylorsville Character Areas Map

#### City of White

The following Character Areas were identified within the City of White:

**Public/Institutional**: Government buildings and public safety facilities; public schools; churches, etc.

**Residential Traditional Neighborhoods** – **Stable**: Includes all residential development within city, the vast majority of which is single family housing. The city is characterized by well-established neighborhoods.

*Development Strategy*: Existing neighborhoods are well-established with little opportunity for new development.

**Industrial**: Includes a combination of: a) general industrial area in southwestern area of city between Old Tennessee Highway and railroad tracks, and a similar area in northern part of city between Highway 411 and railroad tracks, and 2) heavy industrial areas in northeastern area of city along Industrial Blvd.

*Development Strategy:* These areas are currently in use. Few changes are expected to the current land use.

**Commercial**: Commercial parcels along Hwy. 411. Mostly small retail/service establishments.

*Development Strategy*: The city will be examining development issues related to commercial areas, including the future addition of sidewalks and the addition of turn lanes on Hwy. 411.

**Agricultural**: Includes large areas west of Old Tennessee Highway, and an area south/central of the city's core, east of the railroad tracks. Areas have mixture of farmland, pasture, chicken farms, etc.

*Development Strategy*: A small handful of families currently control most of the agricultural land in the city. Little change in land use is anticipated for these areas.

**Major Highway Corridor/In Town Corridor**: Highway 411 corridor through town. Corridor contains most of the commercial activity within the city limits. Traffic along this corridor is expected to increase significantly as areas outside the city limits develop in the future.

*Development Strategy*: DOT will be conducting a traffic study of Hwy. 411 corridor to evaluate the feasibility of adding turn lanes. The city will be exploring need for sidewalks along the corridor.

City of White Character Areas Map

# V. Development Strategies and Consistency With QCO

State planning guidelines require local governments to examine current policies for consistency with a series of Quality Community Objectives (QCO). The following summaries describe the extent to which policies and strategies of the respective localities are consistent with these QCO.

#### Bartow County

| Quality Community Objective  | Consistency With Objective   |
|--|--|
| Regional Identity:<br>Regions should promote and preserve an<br>"identity," defined in terms of traditional<br>regional architecture, common economic<br>linkages that bind the region together, or<br>other shared characteristics.   | Bartow County's current strategies are<br>consistent with all of the suggested<br>indicators of the Regional Identity<br>Objective.  |
| Growth Preparedness:<br>Each community should identify and put in<br>place the prerequisites for the type of<br>growth it seeks to achieve. These may<br>include housing and infrastructure (roads,<br>water, sewer and telecommunications) to<br>support new growth, appropriate training of<br>the workforce, ordinances to direct growth<br>as desired, or leadership capable of<br>responding to growth opportunities. | Bartow County's current strategies are<br>consistent with all of the suggested<br>indicators of the Growth Preparedness<br>Objective. In regards to the use of<br>population projections in local decision-<br>making, all of the local communities have<br>access to long-term population projections<br>developed by Bartow County if they so<br>desire. The county utilizes a general five<br>year Capital Improvements Program and<br>SPLOST funds for facilities and<br>infrastructure needs. |
| Appropriate Businesses:<br>The businesses and industries encouraged<br>to develop or expand in a community<br>should be suitable for the community in<br>terms of job skills required, linkages to<br>other economic activities in the region,<br>impact on the resources of the area, and<br>future prospects for expansion and creation<br>of higher skill job opportunities.  | Bartow County's current strategies are<br>consistent with all of the suggested<br>indicators of the Appropriate Businesses<br>Objective.   |

| Educational Opportunities:<br>Educational and training opportunities<br>should be readily available in each<br>community – to permit community<br>residents to improve their job skills, adapt<br>to technological advances, or to pursue<br>entrepreneurial ambitions.   | Educational opportunities in Bartow<br>County currently satisfy all of the<br>suggested indicators of the Educational<br>Opportunities Objective.  |
|---|--|
| Employment Options:<br>A range of job types should be provided in<br>each community to meet the diverse needs<br>of the local workforce   | Bartow County's current economic climate<br>offers jobs for individuals of all skill levels,<br>including managerial and professional jobs.<br>The county works closely with the local<br>Chamber of Commerce. Its economic<br>development efforts include an<br>entrepreneur support program.   |
| Heritage Preservation:<br>The traditional character of the community<br>should be maintained through preserving<br>and revitalizing historic areas of the<br>community, encouraging new development<br>that is compatible with the traditional<br>features of the community, and protecting<br>other scenic or natural features that are<br>important to defining the community's<br>character. | There are no "historical" development<br>districts in unincorporated Bartow County.<br>There is an active Historical Society that<br>concerns itself with preservation issues<br>within the larger Bartow County<br>community.   |
| Open Space Preservation:<br>New development should be designed to<br>minimize the amount of land consumed,<br>and open space should be set aside from<br>development for use as public parks or as<br>greenbelts/wildlife corridors.  | Bartow County's current development<br>strategies are consistent with all of the<br>suggested indicators of the Open Space<br>Preservation Objective. The county has a<br>county wide greenspace plan and utilizes<br>land conservation programs and<br>subdivision conservation ordinances to<br>protect open space and environmentally<br>sensitive areas in the county. |

| Environmental Protection:<br>Air quality and environmentally sensitive<br>areas should be protected from negative<br>impacts of development. Environmentally<br>sensitive areas deserve special protection,<br>particularly when they are important for<br>maintaining traditional character or quality<br>of life of the community or region.<br>Whenever possible, the natural terrain,<br>drainage, and vegetation of an area should<br>be preserved. | Bartow County does not currently have a<br>tree preservation ordinance, nor a tree<br>replanting ordinance for new<br>developments. However, the county does<br>not permit clear cutting of trees in new<br>residential developments, except within the<br>construction footprint of the house or<br>sufficient area for construction. Other<br>programs and policies are consistent the all<br>other suggested indicators of the<br>Environmental Protection Objective. The<br>county's green space plan and its watershed<br>assessment includes a natural resources<br>inventory.        |
|--|---|
| Regional Cooperation:<br>Regional cooperation should be encouraged<br>in setting priorities, identifying shared<br>needs, and finding collaborative solutions,<br>particularly where it is critical to success of<br>a venture, such as protection of shared<br>natural resources.   | Bartow County and its various cities have<br>routinely engaged in joint Comprehensive<br>Planning processes over the past 10 years.<br>The county is satisfied with its current<br>Service Delivery Strategies, and it<br>cooperates with all of the respective cities<br>in various capacities in regards to shared<br>services.   |
| Transportation Alternatives:<br>Alternatives to transportation by<br>automobile, including mass transit, bicycle<br>routes and pedestrian facilities, should be<br>made available in each community.<br>Greater use of alternate transportation<br>should be encouraged.   | Unincorporated Bartow County does not<br>have a network of sidewalks that would<br>allow people to walk to a variety of<br>destinations. It does not require new<br>developments to connect to existing<br>developments through a network of streets;<br>single-entry/exits are allowed. Other<br>policies and strategies are consistent with<br>the remaining suggested indicators of the<br>Transportation Alternatives Objective. The<br>county offers limited public transportation<br>(Bartow Transit). There are some bicycle<br>paths in the county, but they are not<br>widespread. |
| Housing Opportunities:<br>Quality housing and a range of housing<br>size, cost and density should be provided in<br>each community, to make it possible for all<br>who work in the community to also live in<br>the community.   | Bartow County does not allow residential<br>construction on small lots (less than 5,000<br>square feet). Otherwise, county policies<br>and strategies are consistent with the<br>remaining suggested indicators of the<br>Housing Opportunities Objective. The<br>county's housing options include group<br>homes for people with disabilities, housing<br>for senior citizens, and battered women<br>shelters.   |

| Traditional Neighborhoods:                   | Bartow County does not have a street tree     |
|--|---|
| Traditional neighborhood development         | ordinance that requires new developments      |
| patterns should be encouraged, including     | to plant shade-bearing trees appropriate to   |
| use of more human scale development,         | the climate. It does not allow neo-           |
| mixing of uses within easy walking           | traditional development 'by right." It does   |
| distance of one another, and facilitating    | not require tree replanting at the present    |
| pedestrian activity.                         | time. Other county policies and strategies    |
|  | are consistent with all of the remaining      |
|  | indicators of the Traditional Neighborhood    |
|  | Objectives. The county does not permit        |
|  | clear-cutting in developments. Clear-         |
|  | cutting is limited to a building's footprint  |
|  | and a reasonable perimeter around the         |
|  | footprint. The "Keep Bartow Beautiful"        |
|  | program is active in the county. Sidewalks    |
|  | and public areas are maintained by the        |
|  | county's road department maintenance          |
|  | program. The county requires sidewalks in     |
|  | R1 developments.                              |
| Infill Development:                          | Unincorporated Bartow County does not         |
| Communities should maximize the use of       | have areas for planned nodal development.     |
| existing infrastructure and minimize the     | It does not allow for small lot (less than    |
| conversion of undeveloped land at the        | 5000 square feet) development.                |
| urban periphery by encouraging               | Brownfield and greyfield redevelopment is     |
| development or redevelopment of sites        | irrelevant for unincorporated Bartow          |
| closer to the downtown or traditional urban  | County. It does have an inventory of          |
| core of the community.                       | vacant sites and buildings that are available |
|  | for redevelopment or infill development.      |
| Sense of Place:                              | Bartow County does not have ordinances to     |
| Traditional downtown areas should be         | regulate aesthetics of development in         |
| maintained as the focal points of the        | highly visible areas. Otherwise, county       |
| community or, for newer areas where this     | policies and strategies are consistent with   |
| is not possible, the development of activity | the remaining indicators of the Sense of      |
| centers that serve as community focal        | Place Objective. It is working with the       |
| points should be encouraged. These           | Etowah Valley Historical Society to           |
| community focal points should be             | establish an inventory of sites that are      |
| attractive, mixed-use, pedestrian-friendly   | important to the county's history and         |
| places where people choose to gather for     | heritage. It protects areas of farmland       |
| shopping, dining, socializing and            | through zoning regulations and its Growth     |
| entertainment.                               | Management Plan.                              |

| Local Self-determination:                    | County policies and strategies are     |
|--|--|
| Communities should be allowed to develop     | consistent will all indicators of this |
| and work toward achieving their own          | objective.                             |
| vision for the future. Where the state seeks |  |
| to achieve particular objectives, state      |  |
| financial and technical assistance should be |  |
| used as the incentive to encourage local     |  |
| government conformance to those              |  |
| objectives.                                  |  |

## City of Adairsville

| Quality Community Objective  | Consistency With Objective                                 |
|--|--|
| Quality Community Objective  | Consistency With Objective                                 |
| Regional Identify:   | The city does not have businesses that                     |
| Regions should promote and preserve an   | process local agricultural products.                       |
| "identity," defined in terms of traditional                                      | However, the city does participate in the                  |
| regional architecture, common economic   | Georgia Dept. of Economic Development's                    |
| linkages that bind the region together, or                                       | regional tourism partnership. It has a                     |
| other shared characteristics.  | number of antebellum and Victorian homes                   |
|  | that fit into architectural styles of the                  |
| Courth Draw and Lance  | region.  |
| Growth Preparedness:   | The city has no formal Capital                             |
| Each community should identify and put in  | Improvements Program. Other policies                       |
| place the prerequisites for the type of  | and strategies are consistent with other                   |
| growth it seeks to achieve. These may include housing and infrastructure (roads, | suggested indicators of the Growth Preparedness Objective. |
| water, sewer and telecommunications) to  | rieparedness Objective.                                    |
| support new growth, appropriate training of                                      |  |
| the workforce, ordinances to direct growth                                       |  |
| as desired, or leadership capable of   |  |
| responding to growth opportunities.  |  |
| responding to grow an opportunities.   |  |
| Appropriate Businesses:  | The city's economic development                            |
| The businesses and industries encouraged   | organization has not created a business                    |
| to develop or expand in a community  | development strategy based on an analysis                  |
| should be suitable for the community in  | of the community's strengths, assets and                   |
| terms of job skills required, linkages to  | weaknesses. It does attempt to recruit                     |
| other economic activities in the region,   | businesses that are compatible with the                    |
| impact on the resources of the area, and   | types of businesses already in the city.                   |
| future prospects for expansion and creation                                      | Other characteristics of the city's economic               |
| of higher skill job opportunities.   | base are reflective of the remaining                       |
|  | indicators of the Appropriate Business                     |
|  | Objective.   |
| Educational Opportunities:   | The city does not provide work-force                       |
| Educational and training opportunities   | training opportunities for its residents.                  |
| should be readily available in each  | Higher education opportunities are                         |
| community – to permit community  | available for local residents in other nearby              |

| to technological advances, or to pursue  | opportunities in the city for college                      |
| entrepreneurial ambitions.   | graduates.   |
| Employment Options:  | The city's economic development program                    |
| A range of job types should be provided in                                       | does not have an entrepreneur support                      |
| each community to meet the diverse needs of the local workforce                  | program. It does offer job opportunities for               |
|  | a diverse workforce, including skilled and                 |
|  | unskilled laborers, and managerial and                     |
|  | professional positions                                     |

| Heritage Preservation:<br>The traditional character of the community<br>should be maintained through preserving<br>and revitalizing historic areas of the<br>community, encouraging new development<br>that is compatible with the traditional<br>features of the community, and protecting<br>other scenic or natural features that are<br>important to defining the community's<br>character.  | The city's entire downtown area is on the<br>National Historic Register. The city has an<br>active historic preservation commission,<br>and the city has ordinances to ensure that<br>new development complements the city's<br>historical heritage.   |
|--|--|
| Open Space Preservation:<br>New development should be designed to<br>minimize the amount of land consumed,<br>and open space should be set aside from<br>development for use as public parks or as<br>greenbelts/wildlife corridors.   | The city does not have a local land<br>conservation program, nor does it have<br>subdivision conservation ordinance for<br>residential development. It does, however,<br>encourage set-asides in new development.  |
| Environmental Protection:<br>Air quality and environmentally sensitive<br>areas should be protected from negative<br>impacts of development. Environmentally<br>sensitive areas deserve special protection,<br>particularly when they are important for<br>maintaining traditional character or quality<br>of life of the community or region.<br>Whenever possible, the natural terrain,<br>drainage, and vegetation of an area should<br>be preserved. | The city does not have a natural resources<br>inventory. It does not have a tree<br>preservation ordinance, nor a tree<br>replanting ordinance for new development.<br>It does utilize stormwater best management<br>practices for all new developments, and<br>employs land use measures to protect<br>natural resources in the community.  |
| Regional Cooperation:<br>Regional cooperation should be encouraged<br>in setting priorities, identifying shared<br>needs, and finding collaborative solutions,<br>particularly where it is critical to success of<br>a venture, such as protection of shared<br>natural resources.   | The city has routinely been involved in<br>county wide Comprehensive Planning<br>activities. It is satisfied with its Service<br>Delivery Strategies, and cooperates with<br>the county on issues of shared services.  |
| Transportation Alternatives:<br>Alternatives to transportation by<br>automobile, including mass transit, bicycle<br>routes and pedestrian facilities, should be<br>made available in each community.<br>Greater use of alternate transportation<br>should be encouraged.   | The city does not provide public<br>transportation, although it probably is<br>unnecessary. The city is in the process of<br>installing sidewalks in certain areas that<br>will allow people to walk safely to a<br>variety of locations. While the city does<br>not have an ordinance that requires new<br>developments to provide sidewalks, the<br>city council and planning commission<br>insist on them when development plans are<br>under consideration. There are no bicycle<br>routes in the city. Other policies and |

|  | strategies are consistent with the remainir<br>indicators of the Transportation<br>Alternatives Objective. |
|--|--|
| Housing Opportunities:                       | The city does not offer housing programs   |
| Quality housing and a range of housing       | that cater to households with special need   |
| size, cost and density should be provided in | It does not allow residential development  |
| each community, to make it possible for all  | on small lots (under 5000 square feet).  |
| who work in the community to also live in    | Otherwise, city policies and strategies are  |
| the community.                               | consistent with the remaining indicators of  |
|  | the Housing Opportunities Objective.   |
| Traditional Neighborhood:                    | The city does not have a street tree   |
| Traditional neighborhood development         | ordinance that requires new development  |
| patterns should be encouraged, including     | to plant shade-bearing trees, nor does it  |
| use of more human scale development,         | have an organized tree planting campaigr   |
| mixing of uses within easy walking           | for public areas. Otherwise, city policies   |
| distance of one another, and facilitating    | and strategies are consistent with the   |
| pedestrian activity.                         | remaining indicators of the Traditional  |
|  | Neighborhoods Objective.   |
| Infill Development:                          | The city does not actively promote   |
| Communities should maximize the use of       | brownfield or greyfield redevelopment. I   |
| existing infrastructure and minimize the     | does not have areas designated for nodal   |
| conversion of undeveloped land at the        | development. It does not allow small lot   |
| urban periphery by encouraging               | development. The city's zoning office  |
| development or redevelopment of sites        | keeps an inventory of vacant sites and   |
| closer to the downtown or traditional urban  | buildings that are available for   |
| core of the community.                       | redevelopment.   |

| Quality Community Objective   | Consistency With Objective  |
|---|---|
| Sense of Place:   | The city does not have a plan to protect  |
| Traditional downtown areas should be  | designated farmland. The city's historic  |
| maintained as the focal points of the<br>community or, for newer areas where this<br>is not possible, the development of activity<br>centers that serve as community focal<br>points should be encouraged. These<br>community focal points should be<br>attractive, mixed-use, pedestrian-friendly<br>places where people choose to gather for<br>shopping, dining, socializing and<br>entertainment. | downtown area, along with other policies<br>and strategies, are consistent with the Sense<br>of Place Objective.  |
| Local Self-determination:<br>Communities should be allowed to develop<br>and work toward achieving their own<br>vision for the future. Where the state seeks<br>to achieve particular objectives, state<br>financial and technical assistance should be<br>used as the incentive to encourage local<br>government conformance to those<br>objectives.   | The city does not have a citizen education<br>campaign that allows citizens to learn about<br>the development process. It does not have<br>a public-awareness element in its<br>compressive planning process. It does not<br>have a development guidebook that<br>illustrates the types of development that are<br>preferable in the city. It is currently in the<br>process of reviewing its development and<br>zoning regulations to ensure that they help<br>the city realize its development goals.<br>Other policies and strategies are consistent<br>with other indicators of this objective. |

| objectives.                                  |  |

## City of Kingston

| Quality Community Objective   | Consistency With Objective  |
|---|---|
| Regional Identify:  | Development in Kingston is characteristic                                       |
| Regions should promote and preserve an                              | of the region in terms of architectural style                                   |
| "identity," defined in terms of traditional                         | and heritage. The city promotes tourism   |
| regional architecture, common economic                              | opportunities based on the unique   |
| linkages that bind the region together, or                          | characteristics of the region. Otherwise,                                       |
| other shared characteristics.                                       | the city does not utilize strategies that are                                   |
| other shared characteristics.                                       | consistent with the remaining indicators of                                     |
|   | the Regional Identity Objective.  |
| Growth Preparedness:  | Current city practices and strategies are not                                   |
| Each community should identify and put in                           | consistent with the various indicators of the                                   |
| place the prerequisites for the type of                             | Growth Preparedness Objective, although   |
| growth it seeks to achieve. These may                               | the city does have access to population   |
| include housing and infrastructure (roads,                          | projections developed by Bartow County  |
| water, sewer and telecommunications) to                             | for future planning purposes.   |
| support new growth, appropriate training of                         | Promotion Processi  |
| the workforce, ordinances to direct growth                          |   |
| as desired, or leadership capable of                                |   |
| responding to growth opportunities.                                 |   |
|   |   |
| Appropriate Businesses:   | The City of Kingston is a "bedroom  |
| The businesses and industries encouraged                            | community." Due to its small size, it has                                       |
| to develop or expand in a community                                 | limited business opportunities and job base.                                    |
| should be suitable for the community in                             | Most of its residents work in surrounding                                       |
| terms of job skills required, linkages to                           | communities.  |
| other economic activities in the region,                            |   |
| impact on the resources of the area, and                            |   |
| future prospects for expansion and creation                         |   |
| of higher skill job opportunities.                                  |   |
| Educational Opportunities:  | The city does not provide workforce   |
| Educational Opportunities:  |   |
| Educational and training opportunities                              | training opportunities for its residents.                                       |
| should be readily available in each community – to permit community | There are few jobs for college graduates.<br>Higher education opportunities are |
| residents to improve their job skills, adapt                        | available in several nearby communities.  |
| to technological advances, or to pursue                             | available in several hearby communities.  |
| entrepreneurial ambitions.  |   |
| Employment Options:   | The city has no economic development  |
| A range of job types should be provided in                          | program. It has few jobs for skilled or   |
| each community to meet the diverse needs                            | unskilled laborers, or for persons with   |
| of the local workforce  | professional and managerial skills.   |
| Heritage Preservation:  | The city has no designated historic district,                                   |
| The traditional character of the community                          | nor does it have an active historic   |
| should be maintained through preserving                             | preservation commission.  |

| and revitalizing historic areas of the          |   |
|---|---|
| community, encouraging new development          |   |
| that is compatible with the traditional         |   |
| features of the community, and protecting       |   |
| other scenic or natural features that are       |   |
| important to defining the community's           |   |
| character.                                      |   |
|   |   |
| Open Space Preservation:                        | The city does not have a local land   |
| New development should be designed to           | conservation program. Other city strate   |
| minimize the amount of land consumed,           | satisfy all other suggested indicators of   |
| and open space should be set aside from         | Open Space Preservation Objective.  |
| development for use as public parks or as       |   |
| greenbelts/wildlife corridors.                  |   |

| the community.  | and strategies are consistent with all other<br>indicators of the Housing Opportunities<br>Objective.  |
|---|--|
| Traditional Neighborhood:<br>Traditional neighborhood development<br>patterns should be encouraged, including<br>use of more human scale development,<br>mixing of uses within easy walking<br>distance of one another, and facilitating<br>pedestrian activity.  | The city does not have tree ordinances of<br>any kind, nor does it have a organized tree<br>planting campaign. The local schools<br>serving Taylorsville are too far away to<br>make walking and bicycles a viable<br>alternative for school children. The city<br>does not allow neo-traditional development<br>"by right." Other city strategies are<br>consistent with the remaining indicators of<br>the Traditional Development Objective.                            |
| Infill Development:<br>Communities should maximize the use of<br>existing infrastructure and minimize the<br>conversion of undeveloped land at the<br>urban periphery by encouraging<br>development or redevelopment of sites<br>closer to the downtown or traditional urban<br>core of the community.  | The city has no sewer system, so small lot<br>development is not feasible. The city has<br>no inventory of vacant sites suitable for<br>redevelopment or infill development. Few,<br>if any, sites of this nature exist in<br>Taylorsville.  |
| Quality Community Objective<br>Sense of Place:<br>Traditional downtown areas should be<br>maintained as the focal points of the<br>community or, for newer areas where this<br>is not possible, the development of activity<br>centers that serve as community focal<br>points should be encouraged. These<br>community focal points should be<br>attractive, mixed-use, pedestrian-friendly<br>places where people choose to gather for<br>shopping, dining, socializing and<br>entertainment. | Consistency With Objective<br>The city has ordinances regulating the size<br>and type of signage in the community. It<br>does not have formal strategies consistent<br>with other indicators of the Sense of Place<br>Objective.   |
| Local Self-determination:<br>Communities should be allowed to develop<br>and work toward achieving their own<br>vision for the future. Where the state seeks<br>to achieve particular objectives, state<br>financial and technical assistance should be<br>used as the incentive to encourage local<br>government conformance to those<br>objectives.   | The city does not have a development<br>guidebook that illustrates types of desirable<br>development in the city. Taylorsville does<br>not anticipate, nor does it desire, significant<br>growth in upcoming years. Accordingly,<br>little efforts are made in regards to long-<br>term comprehensive planning beyond the<br>standard zoning regulations that serve to<br>maintain the character of the area. The<br>city will retain its rural/agricultural<br>character. |

## City of White

| Quality Community Objective  | Consistency With Objective  |
|--|---|
| Regional Identify:<br>Regions should promote and preserve an<br>"identity," defined in terms of traditional<br>regional architecture, common economic<br>linkages that bind the region together, or<br>other shared characteristics.   | The city does not participate in the Georgia<br>Dept. of Economic Development's regional<br>tourism partnership; it does not promote<br>tourism opportunities based on the unique<br>characteristics of the region. The<br>community's activities and development<br>are consistent with all other suggested<br>indicators of the Regional Identity<br>Objective.   |
| Growth Preparedness:<br>Each community should identify and put in<br>place the prerequisites for the type of<br>growth it seeks to achieve. These may<br>include housing and infrastructure (roads,<br>water, sewer and telecommunications) to<br>support new growth, appropriate training of<br>the workforce, ordinances to direct growth<br>as desired, or leadership capable of<br>responding to growth opportunities. | The city does not have a Capital<br>Improvements Program that supports<br>current and future growth. The city does<br>not have areas designated for future growth<br>that are based on a natural resources<br>inventory of the community. The city's<br>activities and development are consistent<br>with all other suggested indicators of the<br>Growth Preparedness Objective.   |
| Appropriate Businesses:<br>The businesses and industries encouraged<br>to develop or expand in a community<br>should be suitable for the community in<br>terms of job skills required, linkages to<br>other economic activities in the region,<br>impact on the resources of the area, and<br>future prospects for expansion and creation<br>of higher skill job opportunities.  | The city does not have a business<br>development strategy based on an analysis<br>of the community's assets, strengths and<br>weaknesses. It does not have its own<br>economic development organization. It has<br>no plan for the recruitment of businesses<br>that are consistent with the resources of the<br>community. They do not recruit businesses<br>that provide or create sustainable products.<br>The city's character is consistent with other<br>suggested indicators of the Appropriate<br>Business Objective. |
| Educational Opportunities:<br>Educational and training opportunities<br>should be readily available in each<br>community – to permit community<br>residents to improve their job skills, adapt<br>to technological advances, or to pursue<br>entrepreneurial ambitions.  | The city does not provide workforce<br>training for its residents, although<br>opportunities for such training may be<br>available from the county. There are no<br>job opportunities within the city for college<br>graduates; these residents must find work<br>in other communities. There are no<br>opportunities for higher education within<br>the city itself, although opportunities do<br>exist in nearby communities.   |
| Employment Options:  | There are no professional or managerial   |

| A range of job types should be provided in<br>each community to meet the diverse needs<br>of the local workforce  | jobs in the community; there is no<br>entrepreneurial support program. There a<br>opportunities for skilled and unskilled<br>workers, however.  |
|---|---|
| Heritage Preservation:<br>The traditional character of the community<br>should be maintained through preserving<br>and revitalizing historic areas of the<br>community, encouraging new development<br>that is compatible with the traditional<br>features of the community, and protecting<br>other scenic or natural features that are<br>important to defining the community's<br>character.   | The city of White does not have a<br>designated historical district, nor is there<br>area to which such a concept would really<br>apply. It does not have an historic<br>preservation commission. It does not hav<br>ordinances that require new development<br>compliment historical development.  |
| Open Space Preservation:<br>New development should be designed to<br>minimize the amount of land consumed,<br>and open space should be set aside from<br>development for use as public parks or as<br>greenbelts/wildlife corridors.  | The city's policies are consistent in some<br>way with all of the suggested indicators of<br>the Open Space Preservation Objective.<br>has a shared greenspace program with<br>Bartow County. It is in the process of<br>rewriting its subdivision ordinance to<br>include conservation protections.  |
| Quality Community Objective<br>Environmental Protection:<br>Air quality and environmentally sensitive<br>areas should be protected from negative<br>impacts of development. Environmentally<br>sensitive areas deserve special protection,<br>particularly when they are important for<br>maintaining traditional character or quality<br>of life of the community or region.<br>Whenever possible, the natural terrain,<br>drainage, and vegetation of an area should<br>be preserved. | Consistency With Objective<br>The city does not have a comprehensive<br>natural resources inventory. Because no<br>inventory exists, new development can no<br>easily be steered away from all<br>environmentally sensitive areas. Because<br>no inventory of natural resources exists, t<br>city has taken no specific actions to prote<br>those resources. The city does not have a<br>tree preservation ordinance, nor a tree<br>replanting ordinance for new developmen<br>The city does use stormwater best<br>management practices and land use<br>measures that serve to protect natural<br>resources in the community, however. |
| Regional Cooperation:<br>Regional cooperation should be encouraged<br>in setting priorities, identifying shared<br>needs, and finding collaborative solutions,<br>particularly where it is critical to success of<br>a venture, such as protection of shared<br>natural resources.  | The city's policies and strategies are<br>consistent with all of the suggested<br>indicators of the Regional Cooperation<br>Objective.  |
| Transportation Alternatives:<br>Alternatives to transportation by<br>automobile, including mass transit, bicycle  | The city's currently does not comply with<br>any of the suggested indicators of the<br>Transportation Alternatives Objective. T   |
| routes and pedestrian facilities, should be<br>made available in each community.<br>Greater use of alternate transportation<br>should be encouraged.  | city's small size makes some of these<br>suggestions irrelevant (e.g., public<br>transportation).   |
|---|---|
| Housing Opportunities:<br>Quality housing and a range of housing<br>size, cost and density should be provided in<br>each community, to make it possible for all<br>who work in the community to also live in<br>the community.  | The city has no options available for loft-<br>living, downtown living or "neo-<br>traditional" development. It does not hav<br>vacant, developable land for multifamily<br>housing. It does not support community<br>development corporations seeking to bui<br>housing for low-income households, nor<br>does it have housing programs for people<br>with special needs. It does not allow the<br>construction of homes on small lots of le<br>than 5,000 square feet. City policies and<br>strategies are consistent with all of the<br>other suggested indicators of the Housing<br>Alternatives Objective. |
| Traditional Neighborhood:<br>Traditional neighborhood development<br>patterns should be encouraged, including<br>use of more human scale development,<br>mixing of uses within easy walking<br>distance of one another, and facilitating<br>pedestrian activity.  | Due to the relatively small size of the cit<br>several errands can be made on foot, if<br>residents so desire. Schools (operated by<br>Bartow County) are located in or near cit<br>neighborhoods. Otherwise, the city's<br>current strategies are not consistent with<br>most of the suggested indicators of the<br>Traditional Neighborhoods Objective.   |
| Infill Development:<br>Communities should maximize the use of<br>existing infrastructure and minimize the<br>conversion of undeveloped land at the<br>urban periphery by encouraging<br>development or redevelopment of sites<br>closer to the downtown or traditional urban<br>core of the community.  | Currently, the city does not engage in<br>programs consistent the suggested<br>indicators for the Infill Development<br>Objective. In some cases, the issues are<br>irrelevant due to the nature of the<br>community.   |
| Quality Community Objective<br>Sense of Place:<br>Traditional downtown areas should be<br>maintained as the focal points of the<br>community or, for newer areas where this<br>is not possible, the development of activity<br>centers that serve as community focal<br>points should be encouraged. These<br>community focal points should be<br>attractive, mixed-use, pedestrian-friendly<br>places where people choose to gather for<br>shopping, dining, socializing and | Consistency With Objective<br>The city does have ordinances regulating<br>the size and type of signage in the<br>community. Otherwise, it does not have<br>policies consistent with the suggested<br>indicators of the Sense of Place Objective   |

| entertainment.                               |   |
|--|---|
| Local Self-determination:                    | The city does not have a citizen education  |
| Communities should be allowed to develop     | campaign in regards to development          |
| and work toward achieving their own          | processes. It does not have processes in    |
| vision for the future. Where the state seeks | place that make it easy for the public to   |
| to achieve particular objectives, state      | stay informed about land and zoning issues. |
| financial and technical assistance should be | It does not have a development guidebook    |
| used as the incentive to encourage local     | that illustrates desirable types of         |
| government conformance to those              | development for the city. It has no annual  |
| objectives.                                  | budget for training of planning commission  |
|  | members and staff. Other policies and       |
|  | strategies are consistent with other        |
|  | indicators of this objective.               |

# DATA ANALYSIS

# Introduction

The table below illustrates briefly a profile of Bartow County, the State of Georgia and the US as a whole. Sections that follow provide more in depth information and comparisons across a range of information. According to this brief overview, Bartow County has a slightly younger population than Georgia and one considerably younger than the US as a whole. Bartow's population is also less ethnically diverse than either the state or the nation. Housing is more likely to be occupied (a lower percentage of vacant units) and the percentage of single family homes is also higher. The percentage of the population achieving any of the measured levels of educational attainment is lower for the county than for the state or the nation. Despite this, median incomes are not significantly lower and median household incomes are slightly higher. Moreover the percentage of persons below poverty level is lower for the county than for the state or the nation. This can be explained in part by lower mortgage and rental payment data presented in the lower section of the table below.

In the sections that follow, more detailed data are provided by topic. Tables with raw data are presented for all sections and, in some cases, figures are calculated from tabular data to illustrate patterns or trends within the county and its municipalities. In many cases, data are also presented for comparison counties, the state of Georgia as a whole and the nation.

# **Population Projections**

As part of its 1997 Growth Management Plan (GMP), Bartow County examined several different forecasting models for projected population growth over the next several decades. The GMP examined various estimates generated by the U.S. Census Bureau, the Georgia Office of Planning and Budget, and the consulting firm DRI/McGraw Hill. A number of concerns about the various assumptions underlying these estimates were noted in the GMP. Some estimates placed too much weight on Bartow's long history as a rural, slow-growth county, thereby underestimating future population. Other estimates relied on unrealistically high estimates of yearly growth based on Bartow's more recent growth patterns, resulting in a probable overestimation of future populations.

As an alternative, Bartow County developed a forecasting model that examined and compared changes in historical growth rates for three other local counties – Cobb, DeKalb and Gwinnett - that have already experienced large population increases over the past 20-30 years. Looking at the changes in yearly growth rates for each county at different stages in their development and identifying patterns of peak growth rates and the duration of peak growth periods in those respective counties, Bartow County developed a model of future population growth based on an adjusted average of patterns exhibited in those counties.<sup>1</sup>

The table below provides a summary of these results. The population figures for 1980 and 1990 are based on U.S. Census results for those respective years.

|               | 1980        | 1990        | 2000        | 2010        | 2020        | 2030        |
|---------------|-------------|-------------|-------------|-------------|-------------|-------------|
| Bartow County | 40,760      | 55,911      | 76,888      | 123,184     | 184,772     | 200,034     |

| United States | 224,810,192 | 248,032,624 | 281,421,920 | 309,727,784 | 338,033,648 | 366,339,512 |

Population Projections for Bartow County, 1980-2050

It should be noted that the projected population of 76,888 for the year 2000 generated by the forecasting model used in the table above was barely 1% higher than the actual population total of 76,019 derived as a result of the 2000 U.S. Census. The accuracy of this projection provides substantial confidence in the long-range validity of the forecasting model overall. Based on the actual 2000 Census population total of 76,019, the population of Bartow County almost doubled (88% growth rate) between 1980 and 2000. The population grew by 36% from 1990 – 2000.

Based on these projections, Bartow's population is expected to increase 62% during the first decade of this century to a total of 123,184 residents. It is expected to increase by another 50% between the years 2010 - 2020 to 184,772. By the end of that decade, the expected rate of population growth is expected to decline significantly, although the population will continue to grow substantially through the years. The overall growth rate from 2020 to 2030 is expected to be just 8%, by which time some 200,000 people are expected to living in Bartow County. This figure represents a total population growth rate of 163% since the year 2000.

#### Population Growth in Bartow County's Municipalities

As the figure below illustrates, data from the Georgia County Guide show that Bartow County has a very small proportion of residents living in rural farm areas. The largest proportion of residents live inside urban cluster areas<sup>2</sup> or in rural, nonfarm areas in 2000.

#### **Bartow County Population**

<sup>&</sup>lt;sup>1</sup> For a fuller description of the methods used to generate the various projections of population estimates, please see refer to the Growth Management Plan published by Bartow County in February 1997 (pgs 3-1 through 3-19.)

<sup>&</sup>lt;sup>2</sup> Urban Clusters are defined by the US Census Bureau as an area consisting of a central place(s) and adjacent territory with a general population density of at least 1,000 people per square mile of land area that together have a minimum residential population of at least 50,000 people.

Farm, Rural, Urban, 2000

Source: Georgia County Guide 2004-2005

With the exception of the City of Euharlee, other municipalities in Bartow County have not developed their own long-range population projections. For these other municipalities, the table that follows provides population figures and projections for the years 1980 – 2030 developed by the U. S. Census Bureau. Projections for the years 2005 – 2030 are based on the growth rates for each city between the years 1980 – 2000. These figures may not reflect the realities of recent changes in these communities and the county as a whole.

Population data presented below indicate significant anticipated growth in population in Adairsville (47% increase), Cartersville (60%) and White (41%) between the years 2000 and 2030. In addition, according to its own estimates, the population of Euharlee will increase an astonishing 488% between the years 2000 and 2025.

The U.S. Census Bureau figures predict population declines in Emerson (-2%), Kingston (-17%) and Taylorsville (-24%) between the years 2000 and 2030. Again, these numbers are highly suspect as they may not reflect recent and expected changes in development trends in these communities.

Population Figures and Projections for Bartow Municipalities, 1980-2030

|              | 1980  | 1985       | 1990   | 1995   | 2000   | 2005   | 2010   | 2015   | 2020   | 2025   | 2030   |

\* Figures for 2005-2025 are estimates developed by the City of Euharlee for its own 2025 Comprehensive Plan.

The figure below illustrates Census data and estimates on growth in the county, as compared with data and estimates on growth in the state as a whole and in the nation. Despite the concerns noted in the text above about underestimates in Census data for population growth in the county, it is clear that any data source projects growth at a rate higher than the state as a whole and/or the nation. These projections are much more likely to be accurate in the short term, where very strong growth in the county is forecasted. Longer term estimates on growth indicate a slowing of the rate of growth, but continue to project that the population will grow through 2030.

Population Growth Projections 1980-2030 Bartow County, State of Georgia, and US

Source: U.S. Bureau of the Census, 2000.

## Age Distribution of Bartow County Population

The table below provides population projections for different age cohorts through the year 2025 for Bartow County and selected comparison counties. All of these projections are based on U.S. Census data from the year 2000. Not surprisingly, significant increases are expected in all age groups countywide between the years 2000 and 2025, although the increases are significantly larger for some age groups compared to others. According to these figures, for the county as a whole, the senior population (ages 55 and older) in Bartow County is projected to increase by at least 73% between the years 2000 and 2025. The number of school age children (ages 5 - 17) is projected to increase by at least 44% during that same time period, although the vast majority of this growth is expected to be occur among children ages 5 - 13. The number of adults ages 35 - 54 is expected to increase some 74% over this period. It should be remembered that local officials believe the U.S. Census estimates generally underestimate population increases over the next 25 years, so growth rates could be even higher.

The figure below illustrates the growth of the population over the age of 65 in the municipalities in Bartow County. As this figure illustrates, seniors will represent a larger segment of the population in decades to come in the county and its municipalities.

Growth of Population Over 65 Bartow County and Municipalities

Source: U.S. Bureau of the Census, 2000.

Unlike the senior population, the proportion of residents under 18, will decline in some municipalities. The figure below illustrates the projections of growth and decline of the proportion of residents under the age of 18. Note that a decline in the proportion of an age group does not necessarily mean that the overall number of residents will decline, just the percentage of residents who fit within any group. Therefore, even in areas where growth is slow or growth declines, the overall number of residents may increase as the total number of residents increases. Taken together, the figure below and the figure above illustrate a general aging of the population of the county for the years projected.

Growth of Population Under 18 Bartow County and Municipalities

### Race/Ethnicity

The table below provides population figures and projections for members of different races for the years 1980 - 2025. The white population in Bartow County is expected to increase by 58% between the years 2000 - 2025. The African-American population is expected to increase 36% during this same time period. Members of other racial groups are expected to virtually double by 2025.

# Racial Composition of Bartow, Bartow's Municipalities and Comparison Counties, 1980 – 2000, With Projections Through 2030

As is the case for many counties in Georgia, Bartow is expected to have larger than proportional increases in the Hispanic/Latino population when compared to other ethnic groups. The table below provides population figures and projections for the Hispanic population in Bartow County and its respective municipalities for the years 1980 - 2025. For the county as a whole, the Hispanic population is expected to increase 114% between the years 2000 and 2025. Similar increases, with some degree of variability, can be expected in each of the cities.

The growth in the number of Hispanic residents in the county and in Cartersville is illustrated in the figure below. Population estimates are made for years after 2000, and the actual rate of growth may be higher than these estimates. By any measure, it is clear that the number of Hispanic residents in the county is expected to dramatically increase. Smaller cities are not included in this analysis, since rates of growth in small cities are distorted by even small increases in raw data from very low numbers of Hispanic residents in 1980. However, the increases in Hispanic residents expected for the county seat and the county as a whole will be felt in all jurisdictions within the county.

Hispanic Resident Populations and Projections City of Cartersville and Bartow County 1980-2030

#### Number of Households

Countywide, the number of households in Bartow County is expected to increase by at least 62% between the years 2000 and 2020. The number of households in Euharlee is expected to more than double during that time period. Significant increases are expected in most of the other cities, although Census estimates do not include population growth within the cities of Emerson, Kingston and Taylorsville. Projections for these cities are not likely to be accurate however, as it is unlikely that the county will grow without increases in the smaller municipalities. These figures may be suspect in that Census estimates for small municipalities may not fit forecasting models used by the Bureau of the Census.

Average Household Size, 1980 - 2000, With Projections Through 2030

#### Average Household Income

Average household income in Bartow County increased 61% between the years of 1990 and 2000. The rate of increase ranged from a high of 81% in Emerson to a low of 46% in Adairsville. The rate of increase in average household income in Bartow County during this period lagged behind the increase (118%) in the state of Georgia as a whole. In actual dollar amounts, average household incomes in the cities of Adairsville, Kingston and White significantly lag behind household incomes in other parts of the county.

Average Household Income in Bartow County, Bartow's Municipalities and Selected Comparison Counties, 1990-2000

Note: Figures in this table are based on means, while figures in the first table of this section, presenting overviews of the county, the state and the nation are medians. Therefore some differentiation in presentation of results may be an effect of statistical procedures used for comparison.

#### Distribution of Income

The table below provides a breakdown of the changes in the distribution of household income between the years 1990 and 2000. In 1990, 54% of the households in Bartow County had incomes of \$30,000 or less. By 2000, that percentage had dropped to 32% of the total number of households in the county. Only 11% of Bartow County households had incomes of at least \$60,000 in 1990, compared to 31% of the households in the year 2000.

#### Per Capita Income

The table below provides figures and projections on per capita income for the years 1980 - 2025. By the year 2025, per capita income in Bartow County is expected to be \$35,602, an increase of 88% from the year 2000. Per capita income in the respective cities is projected to increase by roughly similar amounts during that same time period.

### **Educational Attainment**

Bartow County and the City of Cartersville maintain separate school systems. As is the case across the state, dropout rates are an area of concern. Georgia Highlands College and North Metro Technical School, which are located within the county, are significant assets. Moreover, Kennesaw State University is less than 20 minutes from downtown Cartersville, offering Bartow residents more opportunities for post-secondary education. Educational attainment estimates for 2005 indicate that 75% of the population has a high school degree or less, 18% hold bachelors degrees and 6% hold masters or more advanced degrees. These figures are below national averages in educational attainment.

The table below provides figures and projections related to educational attainment for the years 1980 - 2025. The number of Bartow County residents who do not have a high school diploma is expected to decline by 3% between the years 2000 - 2025, while the number of residents with at least a four year college degree is expected to increase by 98% during that same time period.

# Economic Development

#### **Employment By Industry**

The following table provides figures and projections for levels of employment in various industry types between the years 1980 and 2025. As a percentage of total employment, employment in the manufacturing industry is projected to reflect the most significant decline between the years of 2000 and 2025, from just over 23% of the total workforce in 2000 to just 15% in 2025. Relative levels of employment are expected to increase most significantly during that same time period for educational, health and social services (14% to 16.6%), construction (11% to 13%) and management services (6.4% to 8%). Relative changes in other industry types are projected to be less pronounced.

## Personal Income

The following table provides figures for personal income by type of income for the years 1990 - 2000. Perhaps the most striking results in this table are in regards to income derived from retirement assets. That figure increased by 276% between the years 1990 and 2000 for Bartow residents as a whole, although income from aggregate wage or salaries still comprised about three-fourths of the total personal income in 2000.

Personal Income By Type, Georgia, Bartow County, Bartow's Municipalities and Selected Comparison Counties, 1990 – 2000

### Labor Force

The following table indicates that while the number of residents who also work in the county increased by about 25% between the years 1990 and 2000, the *percentage* of workers residing in Bartow County who also work in Bartow County decreased slightly between the years 1990 and 2000, from just over 61% to 57.5%. Countywide in 2000, the ratio of workers coming into the county divided by the number living in the county and working elsewhere was .77, placing Bartow 58<sup>th</sup> of the 159 counties on this measure. The overall ratio of workers in/workers out for the state during that year was 1.01.

According to the figures below, approximately 70% of the total workforce works within the county. This is representative of a variety of professional offerings for Bartow workers. Proximity to the metro Atlanta area also offers opportunities for Bartow residents.

A recent report to the county conducted by CH2MHill, highlights the ample light industrical sites in the county. Distribution and warehousing facilites are somewhat underrepresented in the county, but estimates in that report. Two recent plant closings (Unilever and Glad) have been somewhat offset by the recent acquisition of the Toyo plant. Anheuser-Busch, Trinity Rail Operationa and Shaw Industries are major private employers.

Recent employer interviews noted that pre-employment and on-the-job training efforts could be improved. Job preparation courses in local high schools were suggested

by employers who were interviewed.<sup>3</sup> Employers also voiced concerned about the aging of the local workforce, although data suggest that the county's population is younger than that of the state as a whole.

A figure presenting information on the labor force commutes within the county is presented below. This figure illustrates the average commute for Bartow County residents and comparison counties. Bartow County residents' commutes are comparable with those of residents of nearby counties.

Mean Commute In Minutes by County, 2000

Source: Georgia Department of Community Affairs

Labor force participation is often differentiated by gender. The table that follows provides a gender-based breakdown of the labor force in Bartow County, selected nearby counties, the state of Georgia and the US for the years 1990 and 2000. The data indicate that while the labor force grew during that time, the relative balance of men and women in the labor force did not change significantly.

As the figure below illustrates, labor force participation in Bartow County was higher that rates of participation for the state of Georgia and for the US as a whole. These data indicate that workers in Bartow are able to find employment at higher than average national and state rates.

Labor Force Participation, Bartow County, Georgia and US 1990-2000

Source: U.S. Bureau of the Census, 2000.

A second source of information on labor force participation is unemployment rates over time. The figure below illustrates unemployment rates for the county as compared with the state and nation for the years 1995-2004. This figure indicates that Bartow County's labor force has been participating at a higher rate than the nation as a whole in recent years. The county's labor force participation has also been relatively high when compared with the state. County level estimates from this data source (The Georgia County Guide) are not as high as the previous measures taken from the US Census, but overall unemployment rates remain below 6 percent.

Unemployment Rates Bartow County, Georgia and the US, 1995-2004

Source: Georgia County Guide, 2004-2005

## Economic Segmentation

The table below illustrates major sector private employment, sales and establishments within Bartow County in 2002. As this table indicates, the county is dominated by manufacturing interests, wholesale and retail trade. Industry descriptions within the table are provided by NAICS codes established by the US Department of Commerce.

Note 1: "\*" Denotes confidential data relating to individual employers which cannot be released.

Note 2: "Average weekly wages" is derived by dividing gross payroll dollars paid to all employees - both hourly and salaried - by the average number employees who had any earnings; average earnings are then divided by the number of weeks in the period to obtain weekly figures.

Source: Georgia Department of Labor - Data represent jobs in this county covered by unemployment insurance legislation.

Summary data from the table presented above are illustrated in the figure below. As this figure illustrates, federal employment offered the highest wages in Bartow County in the

third sector of 2005. On average, public and private employment compensation in the county was comparable during that quarter. Average Weekly Wages by Employment Sector, Bartow County, 3<sup>rd</sup> Quarter 2005

## **Economic Resources**

In addition to collaboration with various Chambers of Commerce in the area, the county is engaged in a number of economic development initiatives with other governments. These include the Cartersville/Bartow Joint Development Authority, City of Carterville Development Authority, Bartow County Development Authority and the City of Adairsville Development Authority. These authorities focus much of their efforts on business recruitment. An example of the positive effect of such cooperation is the recent recruitment of the Toyo Tire Company. This successful recruitment was also in collaboration with state of Georgia officials and officials from utility companies. It brought over 100 jobs to the area and netted an increase of 100 million in local investment in 2005.

In 2000, the county, municipalities, school districts and major businesses collaborated on a strategic planning process including public hearings, stakeholder meetings, and resulted in the establishment of goals, objectives and clarification of priorities for the county as a whole.

#### Employment Change by Sector, Bartow County 1990-2004

Using the table above, a brief economic analysis can be performed using tools available at the University of Georgia sponsored website www.georgiastats.uga.edu. The discussion that follows is based on outcomes of analyses conducted using that tool.

During the period 1990 to 2004, employment in Bartow County increased by 13,667 jobs. In terms of employment growth, the most important industry was Education and Health Services (4,115 jobs). It is followed by Trade, Transportation, and Utilities (2,979 jobs), and Professional and Business Services (2,376 jobs). The table below displays an analysis of Bartow County's performance in each sector when compared against rates of job growth by sector nationwide. In the years presented, overall job growth in the US was 19.1% (see second column). The third column illustrates the anticipated number of new jobs in Bartow County for each sector listed using the national average. The industrial mix component is found by calculating the percent growth rate for an economic sector at the national level and subtracting from it the national growth component. Thus, the industrial mix component measures how well an industry has grown, net of effects from the business cycle. The table below lists these components for each sector in Bartow County. The highest industrial mix component was 35.8 percent in the Professional and Business Services sector, and it was responsible for 281 jobs (i.e., 35.8 percent times this sector's base employment, 786, equals 281 jobs. After adding up across all eleven sectors, it appears that the industrial mix component was responsible for decreasing the county's employment by -2,493 jobs. Thus, the county has a concentration of employment in industries that are decreasing nation-wide, in terms of employment. The majority of these jobs can be attributed to decreases in the manufacturing sector.

The third and final component of shift-share analysis is called the competitive share. It is the remaining employment change that is left over after accounting for the national and industrial mix components. If a sector's competitive share is positive, then the sector has a local advantage in promoting employment growth in that sector. For example, the Manufacturing sector employment grew by 13.8 percent (see Table). Of this 13.8 percent, 19.1 percent was due to the national growth component and -39.2 percent was due to the industrial mix. This leaves a remainder of 34 percent that is attributable to the local conditions facing this economic sector. For the Manufacturing sector, the competitive share translated into 2,449 jobs (i.e., 34 percent times the base employment level of 7,200 equals 2,449 jobs).

The top three sectors in competitive share were Education and Health Services, Trade, Transportation, and Utilities, and the Manufacturing sector. Across all sectors, the competitive share component totals to 12,716 jobs. This indicates that your area is competitive in securing additional employment.

| Sector                           | National   | National   | Industrial | Industrial | Competitive | Competitiv |
|----------------------------------|------------|------------|------------|------------|-------------|------------|
|                                  | Growth     | Growth     | Mix        | Mix        | Share       | Share      |
|                                  | Component, | Component, | Component, | Component, | Component,  | Component, |
|                                  | Percent    | Jobs       | Percent    | Jobs       | Percent     | Jobs       |
| Education and                    | 19.1       | 181        | 20.0       | 189        | 395.5       | 3,74       |
| Health Services                  |            |            |            |            |             |            |
| Trade,                           | 19.1       | 811        | -7.4       | -316       | 58.4        | 2,48       |

Shift Share Components for Bartow County, 1990-2004

According to this analysis, Bartow County is most competitive in terms of economic growth in education and health services and professional and business services. It is least

competitive with other areas in terms of natural resources and mining. The county outperforms national averages and sector fluctuations noted nationwide in all sectors except natural resources and mining.

Despite national downward trends in manufacturing, Bartow County is doing well in that sector. Employment in construction is also robust in the county.

A recent analysis of business costs for operation was conducted by CH2MHill for Bartow County. The table below is a brief assessment of costs of operation by sector. National averages for costs presented in the table are 100, therefore, as the table illustrates, the overall cost of doing business in Bartow County is approximately 9% below the national average in terms of labor, real estate costs, taxes and utilities. All indices measured in this analysis show that Bartow County outperforms the national average as a place to do business.

| Costs  | Index |
|--|-------|
| Overall Cost of Doing Business Index*                  | 91.1  |
| Overall Labor Cost Index*                              | 95.4  |
| Labor Costs for Key Industry Groups                    |       |
| General Manufacturing                                  | 94.9  |
| Chemicals/ Plastics Manufacturing                      | 96.0  |
| Electronics and Electrical Components<br>Manufacturing | 95.6  |
| Automotive/ Transportation Manufacturing               | 95.7  |
| Warehousing/ Distribution                              | 93.3  |

Costs of Doing Business in Bartow County by Sector, 2006

\* Business costs include labor, taxes, utilities, real estate; National average for each index is 100.

# Major Employers

As the above discussion indicates, manufacturing continues to be a large part of the county's economic engine. Anheuser-Busch, Trinity Rail Operations, Shaw Industries and the recent acquisition of the Toyo production facility are the major manufacturing employers. County, municipal and public educational systems are also major employers. The county retail and healthcare sectors provide services for more rural surrounding communities.

## **Recent Business Initiatives**

The Cartersville-Bartow County Department of Economic Development (CBCDED) is a joint development authority responsible for supporting, growing and maintaining the tax

base in the county. To that end, the CBCDED has the following bank of industrial properties to attract business to the county:

- Cartersville-Bartow County Corporate Park—new with 846 acres for development.
- Cartersville West Industrial Park—116 acres in 547 acre park zoned heavy industrial; convenient to I-75; rail access to airport; full infrastructure.
- Georgia North Industrial Park—almost completely built over, 60 remaining acres; currently includes metal fabrication, compaction roller manufacturer, diesel engine manufacturing, distribution warehouse.
- Adairsville Industrial Park—178 total acres, completely built out; includes carpet manufacturing, wood products manufacturing, concrete products manufacturing and distribution.
- CSX Industrial Park---100 acres, tied to CSX Railroad operations. 15 remaining acres; currently housing operations of Trinity Rail, Gerdau Ameristeed and Graham Packaging.

# Housing

# Types of Housing

The table below provides a summary of the types of housing found in Bartow County for the years 1980 – 2000, both in actual numbers of dwellings and relative percentage for each type during each year. While the total number of dwelling units in the county nearly doubled between 1980 and 2000, the relative balance between the types of dwellings has not changed dramatically during that time. The percentage of single unit (detached) dwellings did decrease significantly between 1980 and 1990 (from 76% to 62%), but the percentage rebounded by 2000 to just over 70%. The relative balance of mobile home dwellings was the only other dwelling type with significant change during this period. Mobiles homes increased in relative numbers between 1980 and 1990 (14% to almost 26%), but had declined by 2000 to 19% of all dwellings in the county.

|                         | 1      | 980     | 1      | 990     | 2000   |         |  |

Projections on the proportion of single family detached homes in Bartow County remain relatively constant, as depicted in the figure below. Projections indicate that there will be minor increases in housing density with some increases in the proportion of dual or multifamily homes and an increase in the number and proportion of mobile homes. However, the overall number of housing units as well as the overall number of single family detached homes is anticipated to grow. These trends do not depict a major change in the types of homes in which county residents live. These data do show that residential construction will develop more of the county and that the overall number of homes will increase substantially.

The figure below illustrates the growth of the housing units in the county as a whole and its municipalities. This figure, as many of the previous tables and figures, illustrates clearly the changes in population and housing stock in the city of Euharlee. Due to the fact that many of the municipalities in the county are small in terms of total population, but are experiencing rapid growth in the number of new single family subdivision development, population projections reflect tremendous growth in terms of percentage increases. Euharlee is particularly noteworthy in this regard.

Housing Unit Growth Bartow County and Municipalities, 1980-2030

### Age of Housing

The table below illustrates the age of housing stock in Georgia, selected comparison counties, Bartow County and its municipalities, using 2000 Census housing data. Approximately 23 percent of all housing stock in Bartow County was built prior to 1950. Comparable figures for the state of Georgia as a whole indicate that a slightly smaller percentage (20 percent) of housing stock statewide was built prior to 1950.

### **Occupancy Characteristics**

The table below provides a summary of the occupancy characteristics of housing units in Bartow County for the years 1990 and 2000. The data indicate that the percentage of housing units that were vacant decreased slightly during this period, from 7.6% to 5.4% of all units. The percentage of owner-occupied units increased during this period from 66% to 71%.

### Housing Costs

A summary of the median property value and median rent for the years 1990 and 2000 is provided below. The data indicate that median property values increased almost 60% during that decade, while median rents increased from \$410 in 1990 to \$575 in 2000, an increase of 40% during that 10 year period. As is noted in other data presented below, Bartow remains a relatively inexpensive place to live within the metro Atlanta area, but rising housing costs deserve attention from area leadership.

| Georgia               | 1990   | 2000    | Cherokee County       | 1990   | 2000    |

Housing Cost (In Dollars), Georgia, Bartow County, Bartow's Municipalities and Selected Comparison Counties, 1990 - 2000

### Cost-Burdened Housing/Jobs Housing Balance

Information on the number of households affected by cost-burdened housing is presented in the following table. Cost burdened housing reflects the number of households that spend more than 30% of their household income on rent or mortgage payments. Of all households included in the analysis, about 30 percent of all Bartow households contribute more than 50% of income to housing costs. This is lower than the average for the state, where over 41% or all Georgia households contribute over 50% of income to housing.

The table below lists subsidized rental housing developments identified by the Georgia Department of Community Affairs that operate within Bartow County. A total of 286 units meet the criteria set forward by the DCA.

Georgia Department of Community Affairs Affordable Rental Housing Developments

The following table illustrates availability of affordable housing in Bartow and other counties. Data in this table are created using a ration of median household value and median household income. The column on the far right is a ratio of the community ratio to that of the nation as a whole. Bartow's ratio compares favorably to the national ratios and to that of the metro Atlanta area. This table is taken from data available at www.demographiacom, which provides data on housing and quality of life indicators across communities.

| Property Name    | Property Address               | Number of Units |

### Special Housing Needs

Special housing needs are met though the efforts of a number of programs. The Etowah Area Consolidated Housing Authority has 358 units available for special needs residents. These units include 107 disabled tenants and 100 elderly residents who meet income needs standards. Homeless populations are also accommodated by the Housing Authority, which currently includes families with 742 children. The average annual gross income of residents served by the Housing Authority is \$13,314 and the average household size is 2.41 persons. Many of these are long-term residents, with 37 percent of all Housing Authority residents remaining in their homes for over 11 years. The county also provides shelter for men who are mentally disabled, victims of battered spouses and nursing homes for the elderly infirm. In 2005, the county reported 3 general nursing homes with 316 beds. Occupancy rates at Bartow nursing homes is high at 95%. a rate significantly higher than statewide nursing home occupancy rates of 87% for that same year. The Housing Authority is not able to fully meet the needs of all who apply for assistance and it maintains a waiting list. Emergency housing is not provided by the county.

In 2000, the county reported 12,835 residents over age 5 with disabilities (18 percent of the total population), ranking it 26<sup>th</sup> of the 159 counties. The proportion of persons with disabilities within age groups increases for those aged 65-74, where 34% of the population is reporting disability and for those aged 75 or older, where 64% report disabilities. In 2004 Medicare aged and disabled enrollment for the county was 9,748 persons. From 1998 to 2004, personal transfer receipts increased at a rate of 63%, significantly higher than the 45.8% rate of increase for the state as a whole.

The Georgia County Guide identifies 969 residents of Bartow County in group homes in 2004. In 2000, there were 5070 single person households, of which 36% were over age 65. Bartow has 55 residents who have been identified with AIDS. The figure below indicates that when compared with neighboring counties, the overall number of residents who have contracted AIDS is relatively small. Data on housing for these persons is not available, although persons with HIV are eligible for the services of the housing authority, if they meet income standards.

Number of AIDS Cases by County, 2004

Source: Georgia County Guide, 2004-2005

Since some special housing needs data is not directly available, indirect assessments of housing needs for special populations can be made using data related to financial and social welfare payments. The figure below illustrates an indirect measure of persons in the county with special housing needs. As this figure illustrates, the county provides the highest proportion of payouts for retirement and disability benefits and medical benefits to residents. Other payments are made to assist families with general expenditures.

Selected Government Payments for Bartow County, 2004 (Total Payout \$303,666)

Source: Georgia County Guide, 2004-2005

Data are not available on the number, if any, of migrant farm workers residing in Bartow County, nor on their housing needs. Direct information on housing for persons recovering from substance abuse is also not available, although data indicate that the county includes 2119 active probationers, 47.9% of whom (1015 persons) have been convicted of drug related crime. Approximately 23 percent of active probationers are female.

### Housing Overcrowding

The following table provides a summary of overcrowded housing conditions, defined as dwelling units in which the average number of residents per room is greater than one, for the years 1990 and 2000. For Bartow County, the data suggest that the relative percentage of housing units that can be classified as "overcrowded" has remained fairly stable between 1990 and 2000 (3.7% and 4%, respectively). Population density for the county is higher than the state average, at 74.2 persons per square mile, compared to 63.4 statewide in 2004.

### Barriers to Affordable Housing

Bartow County's milage rate was 26.85 placing it near the middle of all Georgia counties. The county ranks 24<sup>th</sup> of all 159 counties on net property and utility digest, as calculated by the Georgia County Government Yearbook for 2005. As is noted earlier in this section, average weekly wages in the county are \$613. Median gross rental costs are \$575, below the state average of \$613, making the county a relatively inexpensive

location in which to rent a home. Median costs to own a home in Bartow also compare favorably to statewide data, at \$946 and \$1039, respectively. Mobile homes represent about 19% of all housing units in the county in 2004, a higher proportion than the state as a whole, where mobile homes represent 12% of all households.

Land values in Bartow County are also rising. The Georgia County Guide places Bartow 23<sup>rd</sup> among the 159 counties in Master Economic Rank. This ranking is achieved by using the adjusted gross income reported on Georgia tax return, the local option sales taxes distribution from the state and assessed property and utility values. Bartow improved its ranking slightly from 24<sup>th</sup> to 23<sup>rd</sup> since 1997. In 2003 countywide mileage rates were 26.85, ranking it 77<sup>th</sup> of the counties in Georgia. Assessed property value (at 40% assessment) for the county was \$1,074,122,000 in 2004, according to the Georgia County Guide for 2005-2006. These data are good news for tax rolls, but may be slight indications of concern for lower income housing. As the overall picture of land values improves in the county, homes become more expensive.

#### Quality of Life

A recent assessment of quality of life indicators in the county illustrate that the county ranks relatively low in cultural opportunities, but compares well with the US on traffic congestion, and climate, and cost of living. The Table below illustrates the county rankings on a number of quality of life indicators which have been shown to be salient in retaining and recruiting employees:

| Quality of Life Ratings <sup>4</sup>       |                                |  |  |  |
|--|--------------------------------|--|--|--|
| Cultural Opportunities (US avg.=100)       | 37                             |  |  |  |
| Recreation/ Spectator Sports (US avg.=100) | 42                             |  |  |  |
| Climate (US avg.=100)                      | 101                            |  |  |  |
| Safety (US avg.=100)                       | 58                             |  |  |  |
| Healthcare Availability (US avg.=100)      | 51                             |  |  |  |
| Education Quality (US avg.=100)            | 82                             |  |  |  |
| Cost of Living Index (US avg.=100)         | 95                             |  |  |  |
| Cost of Housing Index (US avg.=100)        | 94                             |  |  |  |
| Traffic Congestion (US avg.=100)           | 117                            |  |  |  |
| Air Quality                                | Bartow in Nonattainment Region |  |  |  |
| Natural Disaster Rating* (Max=100)         | 33                             |  |  |  |

Lower index indicates lower possibility of natural disaster.

<sup>&</sup>lt;sup>4</sup> These indicators were calculated by CH2MHill, as part of a community assessment project conducted for Bartow County in 2006. Quality of life indicators presented here were developed by Moran, Stahl and Boyer by comparing regional statistics with national averages.

Using the quality of life indicators above, Bartow County is ranked in the second tier (of 5 tiers) on recruit ability of employees.

# Mapping of Significant Natural and Cultural Resources

## **Environmental Planning Criteria**

A map of Bartow County's water supply watershed is presented below. A complete examination of the watershed was conducted by the county in 2001. The overall assessment concluded that while the watershed was in relatively good condition, some areas were in danger of pollution. Based on physical habitat assessments, water quality parameters, fecal coliform and enterococci bacterial counts, and assessments of macroinvertebrate and fish communities, streams in the county compare favorably to assessments of other streams within the metro Atlanta Area. However some streams (especially Pumpkinville Creek drainage areas) show signs of degradation from sediment inputs, elevated nutrients and fecal wastes.<sup>1</sup>

<sup>&</sup>lt;sup>1</sup> See "Status of Water Quality and Biological Integrity in Major Watersheds in Bartow County, Georgia," April 2001, Burruss Institute of Public Service and Research, Kennesaw State University.

The following maps represent the county's wetlands and groundwater recharge areas.

River corridors within the county and the district surrounding the Etowah River are presented in the following map:

## Other Environmentally Sensitive Areas:

Bartow County has other areas of environmental concern. Steep slope areas of the county are illustrated in the following map:

The following map illustrates flood plains within the county.

## Endangered Plants and Animals in Bartow County

The Georgia Department of Natural Resources (GA DNR) has identified a number of plant and animal species deemed to be in need of protection or of special concern. In addition, the U.S. Fish and Wildlife Service of the Department of the Interior also has identified endangered animal species and plant life in Bartow County. The following table provides a list of these plant and animal species and their status.

Endangered and Threatened Animals and Plants: Bartow County, Georgia (Identified by the U.S. Fish and Wildlife Service)

| ANIMALS |               |                             |                       |              |

## Significant Natural Resources:

The following map is a comprehensive presentation of all areas of environmental concern. It includes all of the information presented in the previous maps of this section and parks and recreational facilities. It also illustrates protected river and mountain areas of the county.

Each of the maps below illustrates significant special needs areas for municipalities within Bartow County. These maps depict areas of steep slope, wetlands, water supply, historic districts, flood plains, groundwater recharge areas, and rapid development areas.

# Historic and Cultural Sites

### 1991 and 2006 Inventories of Historic Sites

As part of the 1990 Comprehensive Plan process, Bartow County and the City of Cartersville received an Historic Resources Survey grant from the Historic Preservation Section of the Department of Natural Resources. The survey was sponsored by Roselawn Museum and partially funded by the county and Cartersville. The survey, completed in 1991, identified 1,290 historic sites; 59% of those sites were located in the City of Cartersville. Ten percent (10%) of the sites were located in Adairsville. The remaining sites were distributed throughout the other cities and unincorporated Bartow County.

In 2004, in anticipation of the development of the 2006 Comprehensive Plan, the Etowah Valley Historical Society (EVHS) took on the task of updating the 1990 survey results. After consultations with the County, an advisory board was created, volunteer teams were assembled from residents in each of the respective cities, and training in proper survey procedures was completed. The Georgia Department of Natural Resources provided a grant of \$2750 for this project. Funding from the EVHS and private donations contributed an additional \$1600 toward survey expenses. Forty-one volunteers donated a total of 1655 hours to complete the 2006 Inventory of Historic Sites. The information contained in this section of the Comprehensive Plan comes from the resulting report *An Inventory of Historic Sites in Bartow County* (Etowah Valley Historical Society; February 2006). The county and its respective municipalities are very appreciative of the efforts of the EVHS and its volunteer teams on this endeavor.

All historic sites documented by the 1991 and 2006 Inventory Surveys are on record in the EVHS office in the Gold Dome Courthouse on Cherokee Avenue in Cartersville. While there are too many sites to list individually in the Comprehensive Plan, a summary of the 2006 findings for each community is provided below. (Results for some unincorporated communities are provided as well.) A list of sites on the National Historic Register also is provided.

#### Bartow County

In 1991, 1,290 historic sites were identified in unincorporated Bartow County. The 2006 Inventory found:

- ✤ 994 of the historic sites surveyed in 1991 are still in existence
- ✤ 70 historic sites are no longer in existence
- ✤ 298 historic sites were difficult to identify
- ✤ 316 new historic sites were identified.

### City of Adairsville

In 1991, 132 historic sites were surveyed inside the city limits of Adairsville. The 2006 survey found:

✤ 106 of these historic sites are still in existence
- ✤ 4 historic sites are no longer in existence
- ✤ 22 historic sites were difficult to identify due to incomplete information

# ATCO Community

The Atco community originally was a mill town established in 1903 by the American Textile Company. Goodyear purchased the mill town in 1929. The community was later incorporated into the City of Cartersville but retains a strong sense of historical character. In 1991, 254 historic sites were identified in the Atco community. The 2006 survey found:

- ✤ 251 of the historic sites are still in existence
- ✤ 3 of these historic sites are no longer in existence
- 29 new historic sites were identified (new sites or sites that were not identified in 1991 due to incomplete information on the survey forms)

# City of Cartersville

The City of Cartersville has sponsored several additional surveys since 1991, including one in 2005 completed by John Kissane. Cross-referencing the results of these efforts with the results of the 1991 survey indicate:

- ✤ 499 historic sites were identified in 1991
- ✤ 457 of these sites are still in existence
- ✤ 42 historic sites are no longer in existence
- ✤ 71 sites were difficult to identify due to incomplete information
- 107 new historic sites were identified (some of these may have been included in the 1991 survey but were not able to be identified in 2005 due to incomplete information on the survey forms)

# Cassville Community

Cassville was the original county seat of Bartow County. In 1991, 45 historic sites were identified. The 2006 survey found:

- ✤ 44 of these historic sites are still in existence
- ✤ 1 historic site is no longer in existence
- ✤ 57 new historic sites were identified

# City of Euharlee

Thirty (30) historic sites were identified in 1991. The 2006 survey found:

- ✤ 27 of these sites are still in existence
- ✤ 3 historic sites are no longer in existence
- 28 new historic sites were identified (new sites or sites that were not originally identified in 1991 survey due to incomplete information on survey forms)

# City of Emerson

Fourteen (14) historic sites were surveyed in 1991. The 2006 survey found:

- ✤ 12 of these historic sites are still in existence
- ✤ 2 historic sites were difficult to identify due to incomplete information
- ✤ 12 new historic sites were identified

## City of Kingston

The 1991 Inventory survey did not include the City of Kingston and some surrounding unincorporated areas. A private company, New South Associates, undertook a survey of this area for a company looking for locations for new cell phone towers. EVHS was not able to obtain a copy of the report generated by New South. A grant from GA DNR provided the funds to conduct a survey of Kingston in 2005. This survey was conducted by Quatrefoil Consulting in 2004 and validated for the 2006 Inventory by the volunteer team created for Kingston for the EVHS effort. A copy of the Quatrefoil report is on file with the Kingston Women's History Club. The 2006 results found:

- ✤ 100 historic sites were identified in Kingston in 2004
- ✤ 97 of these sites were still in existence in 2006
- ✤ 3 sites are no longer in existence

## Stilesboro Community

Twenty (20) historic sites were identified in the Stilesboro community in 1991. The 2006 survey found:

- ✤ 18 of these sites are still in existence
- ✤ 2 of these sites are no longer in existence
- ✤ 4 historic sites were difficult to identify due to incomplete information
- ✤ 15 new historic sites were identified

# City of Taylorsville

Fourteen (14) historic sites were identified in 1991. The 2006 survey found:

- ✤ 13 of these sites are still in existence
- ✤ 1 historic site is no longer in existence
- ✤ 43 new historic sites were identified

### City of White

No historic sites were identified in White during the 1991 survey, although they certainly did exist at that time. The 2006 survey identified 11 new historic sites.

In addition to the historic sites identified in the 2006 Inventory, other types of cultural sites are worthy for protection. These include:

### Ancient Rock Walls

Four ancient rock walls are known to exist in Bartow County. Their origins are not precisely known. The walls are on private property; plans for preservation are unknown.

### Archeological Sites

There are over 1,000 archeological sites in Bartow County and its municipalities. Included among these are prehistoric and historic Native American villages, campsites and quarries; Civil war battlefields; sites related to the iron industry; cemeteries; old mills; antebellum homes; and gold mining sites, among others. All of these sites are protected under Georgia law. Local enforcement of these laws is lax due to the lack of appropriate local ordinances.

### Bridges

There are a number of historic bridges in the county, including the Covered Bridge in Euharlee.

#### Cemeteries

Cemeteries also are eligible for designation as archeological sites under Georgia law. The EVHS has identified 135 local cemeteries in Bartow County and its municipalities. Bartow County has incorporated cemeteries as a separate layer in the Bartow County GIS system.

As a result of the 2006 Inventory, the EVHS made the following general findings and recommendations:

- The inventory identified 33 historic sites that are most "at risk" in Bartow County. The county should give these sites top priority in future preservation efforts.
- Although there are more than 1000 archeological sites within Bartow County, many of which are prehistoric and historic Native American sites, the location of these sites is difficult to determine because local governments are not authorized to access the Georgia State Archeological Site Files databases. Bartow County should continue to pursue ways this information can be provided to local officials to protect these sites from destruction due to future development.
- The county requires an archeological survey be completed prior to any land disturbances within the Etowah Valley Historic District. This requirement does not apply within the individual municipalities. The municipalities should be encouraged to adopt the same requirement before approval of projects within their jurisdictions.
- The current list of historic markers placed around the county should be reviewed, and new markers for selected sites identified in the 2006 survey should be erected.
- Under Georgia law, cemeteries qualify as cultural resources and can be identified as archeological sites. Bartow County should continue to work with the EVHS to identify additional cemeteries, and continue to include them in the county GIS system.
- ✤ A county-wide Historic Advisory Committee should be established with representatives from the county, the respective municipalities and historical

organizations. This Committee should seek to develop a long-term preservation plan designed to protect the county's historic, archeological and cultural resources.

#### Sites Listed on the National Register of Historic Places

Adairsville Historic District Roughly Main St., bounded by King and Elm Streets, and city limits on South and West.

Etowah Valley Historic District Along Etowah River and drainage areas

Noble Hill School Gaddis Road, Cassville Ga.

Old Bartow County Courthouse 4 E. Church St. Cartersville, Ga.

Pine Log Methodist Church, Campground and Cemetery Ga. 140, West of U.S. 411, Rydal, Ga.

Roselawn Museum 224 Cherokee Avenue, Cartersville, Ga.

### Valley View Euharlee Rd., between Cartersville and Euharlee The map below presents those areas defined as archeological sites by the county and the Georgia Department of Natural Resources.

# **Community Facilities and Services**

The map below illustrates community services provided by Bartow County, including airport location, law enforcement, schools, fire stations, and hospitals. Additional maps illustrating community facilities and services are presented for each of the municipalities within the county in the section that follows.

## Libraries

Bartow County has three libraries which serve 84,971 patrons. The total number of patron visits in FY 2003 was 191,336 and circulation for that year was 247,201. This results in 2.91 units circulated per capita. Library expenditures for that year totaled \$776,782 and library revenues from all sources for that year totaled \$798,654.

# Water Supply and Wastewater Treatment

# Bartow County

Bartow County provides water service to the cities of Euharlee and Taylorsville in addition to the unincorporated areas of Bartow County not serviced by the water systems operated by the cities of Cartersville, Adairsville, Emerson, Kingston and White.

#### Water Supply

The county purchases the vast majority (94%) of its water supply through contracts with the cities of Adairsville, Cartersville and Emerson, and through water purchase agreements with water authorities in Cobb, Cherokee and Polk counties. The remainder of the county's water supply is drawn from Bolivar Spring in northeast Bartow County. Approximately 85% of the county's potable water supply comes from surface water drawn from Lake Allatoona. As of May 2006, the county services some 19,606 water customers including 18,776 residential and 830 industrial/commercial customers. Daily water system distribution is 6.35 MGD.

The Bartow County Water Department currently operates thirteen water reservoirs with a total capacity of 21.15 million gallons. Five additional reservoirs are out-of-service. The water system currently has seventeen active pumping/booster stations and maintains approximately 730 miles of water lines.

### Wastewater Treatment

The county currently operates two wastewater treatment plants. One plant is located in the southern area of the county on Paga Mine Road; the second plant is located on Brown Loop Road near the intersection of Cass-White Road and I-75. The county currently operates twenty-two pump/booster stations and 93 miles of sewer lines. Most of unincorporated Bartow County is serviced, however, by private septic systems. In June 2006, the county wastewater treatment system provided service to 3,353 customers. Daily sewer system flow is .93 MGD. The city of Cartersville also provides sewer service to some areas of unincorporated Bartow.

The county has numerous upgrades to its water and sewer systems scheduled over the next several years. These short-term projects are to be financed from 2003 SPLOST revenues. The county will be constructing a new water reservoir with a capacity of two million gallons on Stiles Mountain. The county also plans to construct a new wastewater treatment plant off of Paga Mine Road to complement the current plant in that area and

protect the Etowah River watershed from the effects of thousands of potential new residents expected to settle in that area. The county recently adjusted its rate structure to provide adequate financial resources for future water and wastewater expansion projects. The system's current five-year Capital Expenditure Projection is 9.5 million dollars.

## City of Adairsville

#### Water Supply

The city of Adairsville currently draws its potable water from Lewis Spring. It is currently permitted to withdraw an average of 4.1 MGD, with a maximum withdrawal of 5.1 MGD. The city has one water treatment facility, located on Twin Bridges Road, which is permitted for 4 MGD. It currently is currently operating at approximately one-half of capacity, or 2 MGD. The city currently provides water service to a total of 2,440 customers; 1,454 of these customers are city residents while the remaining customers (986) are located in Bartow or Floyd counties.

#### Wastewater Treatment

The city operates two wastewater treatment plants which together serve all parts of the city. The South Plant, located on Hall Station Road, is permitted at 500,000 GPD. The North Plant, located on Old Dixie Highway, is permitted at 1,000,000 GPD. Both plants currently have ½ of their permitted capacity available for future growth. The city is currently seeking the necessary permits to expand its wastewater system.

### City of Emerson

### Water Supply

The city of Emerson currently has two sources of water. The primary source is Emerson's Spring No. 1 (listed in some records as the "Moss" Spring). The spring is located 1.7 miles southwest of Emerson near Old Alabama Road. Emerson owns a smaller spring which is still undeveloped.

Water from Emerson's Spring is treated by chlorination and chlorination at the spring pump house located adjacent to the spring. The spring was developed in 1978 and is currently permitted by the Georgia EPD for withdrawal of .625 million gallons per day, not to exceed an average of .5 million gallons per day (mgd). Monthly usage has averaged .5 mgd in recent years, which is the maximum allowed. Spring pumps were updated in 1991.

### Wastewater Treatment

The city of Emerson has one sewage treatment plant. The Henry Jordan Wastewater Treatment Plant is located at 287 Joe Frank Harris Parkway in Emerson. This facility was completed in 2002 and utilizes an extended aeration biological process, followed by disinfection and discharge of treated wastewater into Pumpkinvine Creek. It replaced a facility that had been in use since 1971. The new facility is designed to treat .5 mgd average monthly discharge and .215 average weekly discharge. It operates under NPDES b.1 limits of .172 mgd average monthly discharge and .215 maximum weekly discharge. When B.2 permits are approved the facility will discharge .45 mgd average monthly and .56 mgd as a weekly maximum.

The Emerson sewage collection system serves most of the developed areas within the original city limits and is describe by the Watershed Assessment report approved by the Georgia EPD in 2004. The existing sewer service area lies within a 852 acre drainage sub-basin draining southward to Pumpkinvine Creek and 340 acres in a sub-basin draining northward to the Etowah River. In addition, Emerson is currently constructing a privately funded gravity trunk sewer project (known as the Red Top Sewer Project), with three sewage pumping stations and force mains to convey sewage to the City of Cartersville for treatment and disposal. In an intergovernmental agreement, the city of Cartersville has agreed to accept up to 1.1 mgd of sewage at a connection point near Old Mill Road. The project is designed to allow development and may be upgraded to 2 mgd capacity in the future.

# City of Kingston

### Water Supply

The city of Kingston currently draws its drinking water from the city well located on Railroad Street in downtown Kingston. The well has a maximum yield of 75 gallons per minute (108,000 gallons per day). The city maintains a water tank on Shaw St. that has a capacity of 150,000 gallons. A second elevated water tank, located on Railroad St. in downtown Kingston, is currently out of service. The city currently has 500-550 water customers. Current consumption is 85,000 – 95,000 gallons per day.

The city's recent efforts to identify a suitable location for a second well have been unsuccessful. During the summer months the water supply is occasionally inadequate to meet demand. The city has an emergency water service agreement with Bartow County to provide water service during these shortages to allow the city's water tank to refill. Future growth in Kingston will require a long-term water purchase agreement between the city and county to ensure daily water demands can be met.

### Wastewater Treatment

Kingston relies on private septic systems for wastewater dispersion. A study conducted in 1999 concluded that a city-wide sewer system was not feasible. Septic systems in the old downtown area are failing, however, causing health-code problems for businesses in that area. The city has received a U.S.D.A. Rural Business Enterprise Grant to construct a sewer system for the downtown area only. This system will be installed by 2008. Wastewater treatment services for the rest of the city will not be possible until Bartow County constructs a pumping station closer to the city that the city can access.

# City of White

Water Supply

The city of White began providing water service to its residents in 1958. It currently operates three public wells that provide potable water for the city's water customers. Two of these wells are located on School Street while the third well is on Richards Road. The city's water storage tank currently has a capacity of 500,000 gallons. Current usage averages 1.5 million gallons per month. The city currently provides water service to a total of 360 customers; 80 of these customers are located outside of the city limits. Within the city limits, the city provides water to 55 residential customers, 16 commercial establishments, 3 industrial customers, 2 farms and 4 public/institutional users. City water customers located outside of the city include 64 residential users and 14 commercial customers.

#### Wastewater Treatment

In 2004, the cities of White and Cartersville entered into an intergovernmental agreement which gives the City of White the ability to discharge up to 500,000 gallons per day of wastewater into Cartersville's city sewer system. In 1987, the city of White was forced by the courts to take control over and maintain a private sewer system that had been in operation since the early 1970s serving the Whispering Pines subdivision. Over time it became clear that significant upgrades would be needed at that facility to keep it operating at required standards. It also became apparent that White Elementary School (a county operated school) would not be allowed to expand to meet growing demand unless it was connected to a sewer system to replace the sand filtration system that was in use (and failing) at that time. After exploring a number of alternatives, it was decided that an agreement with the city of Cartersville was the best alternative. Sewer connections were established linking White's small sewer system and White Elementary School with Cartersville facilities serving the Anheuser-Busch plant. The city currently provides sewer service to 63 customers including two commercial users and one industrial customer.

The city is nearing completion of an expansion of their system that will provide sewer access to Toyo Tire Company which is located in unincorporated Bartow County on the northern outskirts of White. The City of Cartersville has agreed to accept an additional 400,000 GPD of wastewater from the Toyo facility. The addition of this sewer line will allow White to connect other parts of the city to the system as well. In addition, the city will be able to provide service to some customers outside the city limits.

### City of Cartersville

Water and Wastewater Supply and Treatment

The Service Delivery Strategy prepared by Bartow County and the cities allows Cartersville to provide water and sewer within its corporate boundaries and some areas outside the city limits. The Utility Department of the City does not have a formal master plan for extending or expanding service. However, some parts of the incorporated areas do not have water or sewer lines; extension of these services into these areas is intended on an as-needed basis. The City of Cartersville Water Department began with the purchase of the Cartersville Water Works Company in 1893. The original water supply was a large spring on the north side of the Etowah River next to the Thompson Weinman Dam. The facilities consisted of two steam driven pumps, several miles of pipe and a 125,000-gallon water tank. The system now obtains its water from Lake Allatoona, a Corps of Engineers lake. Water is taken from one of three elevations on the face of Lake Allatoona Dam and it flows by gravity to the Clarence B. Walker Water Treatment Plant. The water is treated to drinking water quality by state certified operators 365 days a year. The water is then pumped out of this facility to the consumers through 156 miles of distribution lines. The spent water of the community is collected in over 114 miles of sewer lines and it is transported to the Water Pollution Control Plant. There the wastewater is treated to meet water quality standards set by the Environmental Protection Division of the State of Georgia before it is discharged to the Etowah River.

#### **Distribution Systems**

The 19 personnel of the Distribution & Collection Division work diligently to maintain the water and sewer lines of Cartersville's 28 square miles service areas. The crews perform the daily preventative maintenance needed on the system such as making sewer & water taps, renewing and upgrading services, videoing sewer lines to check for blockages, replacing old lines and maintaining a backflow prevention program. The Water Department has a state certified laboratory that is considered one of the best municipal laboratories in Georgia. This facility does control testing and compliance monitoring for the water plant, wastewater plant and the distribution and collection system. Highly trained technicians are individually certified by the state of Georgia, a rigorous quality control program system. A state approved pretreatment program is in place that helps monitor, track, and regulate pollutants that might go into the sewer system. This protects the biological process in the wastewater plan as well as the quality of biosolids for land applications.

#### Treatment Systems

The B. Walker Water Treatment Plant is a high rate drinking water treatment facility which utilizes anthracite coal filters, 10 sedimentation basins and chemical feed system. Raw water from Lake Allatoona gravity flows into the plant where it is treated with alum, chlorine, carbon, polymer and lime before flash mixing. It then proceeds through sedimentation tanks and multimedia (sand and anthracite coal) high rate filters. These filters will process 6 gallons per minute per square foot. The water then goes through chlorination, fluoridation, and pH adjustment and phosphate before it spends at least 30 minutes in a holding well for disinfection. The water is then pumped to the water system by high service pumps. The plant's water pressure ranges between 95 and 100 PSI.

#### Wastewater Treatment Plant

The spent water of the community goes to a 15 million gallon per day activated sludge facility where it is treated to an acceptable level before discharging to the Etowah River. This is a biological process that reduces the organic and solids content of the water to meet a Georgia Environmental Protection Division discharge permit. The plant consists of a bar screen, lift stations, 3 aeration basins (total 10 million gallon capacity),

clarification, chlorination and de-chlorination. Chlorination is accomplished with gaseous chlorine and de-chlorination is done with sodium bisulfate. The biosolids generated in this plant are digested and applied to farmland for ultimate disposal. This state approved land application program has been ongoing for over 20 years. This program has received state and national recognition and many farmers have benefited from it.

# Solid Waste Management

Bartow County's Department of Solid Waste (DSW) operates a 300 acre landfill complex on Allatoona Dam Road in the southern end of the county. Three separate landfills are maintained at this location. The "Subtitle D" Municipal Solid Waste Landfill has a protective liner to prevent seepage of toxic waste into the surrounding environment. The county is currently using Step 1 of the Phase III portion of the landfill. This area was opened in 2001 and has a remaining capacity of approximately 7 years, although this capacity may be extended to 10 years pending GEPD approval of a proposed expansion. In addition to this proposed expansion, future cell construction will allow for a total life capacity of 35 to 40 years for this portion of the landfill. The landfill serves all areas of Bartow County, including the respective municipalities. The collection and disposal of household and commercial waste is handled either through private contractors (or the residents themselves) or municipal solid waste services that may have their own collection programs or that may contract those services out to private contractors.

DSW also operates a Construction and Demolition (C&D) Landfill which accepts nontoxic debris from construction and demolition projects. DSW also operates an Inert Landfill for tree trimmings and other yard debris. Operation of these two additional landfills helps to reduce the amount of material going into the Subtitle D landfill, thus extending its capacity.

Commercial haulers and businesses must be permitted each year and have an account with the DSW. Bartow County residents may dispose of up to one ton of solid waste per load at no charge before they will subject to tipping fees. Tipping fees for private commercial haulers are:

Municipal Solid Waste\$32.50/tonConstruction and Demolition Waste\$25.00/tonInert Waste\$20.00/ton

In addition to the main landfill on Allatoona Dam Road, the DSW also operates 11 collection centers located throughout the county. These centers are intended to provide disposal services for everyday solid waste generated by local households. People with excessively large loads of solid waste are directed to the main landfill.

The following is a list of the collection centers and their locations:

| Cedar Creek Collection Center     | 15 Cedar Creek Road |
|-----------------------------------|---------------------|

# **Recycling Center**

Bartow County DSW also operates a recycling center on Allatoona Dam Road across the street from the landfill. The center was opened in the fall of 1996 and processes over 3000 tons of recyclable material each year. Recyclable material is collected from each of the 11 DSW Collection Centers, local public schools and area businesses.

# Public Safety

# Law Enforcement

# Bartow County

The Bartow County Sheriff's Office is located in a 176,000 sq. ft. facility on Zena Drive. This facility, which opened in 1992, includes the county jail. As of May 2006, the BCSO has 239 employees, 188 of which are sworn peace officers. The BCSO provides law enforcement services to unincorporated areas of the county. It also provides coverage within the City of Taylorsville, and it provides assistance to the city of White, which has only one full-time officer, during the evening hours.

The county jail accepts prisoners from all jurisdictions within Bartow County. A fee is charged the various jurisdictions for each prisoner housed in the jail on local warrants. The jail has 472 fixed beds and 4 portable cots. Overcrowding issues at the jail fluctuate over time and are subject to vagaries in state correctional policies regarding the housing of state prisoners. In May 2006, the jail was slightly overcrowded with a total of 505 inmates. However, in July 2005, the jail was over capacity by some 200+ inmates, a situation that was temporarily eased when numerous state prisoners were either released or transferred according to state correctional policy decisions. The BCSO expects overcrowding to become a problem again by the end of 2006 when it anticipates the inmate population will approach 650.

# City of Adairsville

In 2006, the Adairsville Police Department has thirteen full-time sworn officers (up from twelve in 2005) in addition to two clerical support staff and four part-time employees. In 2005, APD responded to 6,697 calls for assistance.

# City of Emerson

The Emerson Police Department currently consists of 14 certified officers and two support staff (court services). Of the 14 certified offiers, 6 are full-time and 8 are parttime. Two full-time officers, the Chief and Assistant Chief are primarily assigned to administrative work. The department operates 24 hours per day and officers are assigned to 12 hours shiftrs running from 7 to 7. In 2004, Emerson generated 5,443 case numbers and in 2005 5082 case numbers were assigned. The number of dispatched calls in 2004 was 1,143 and there were 1,164 dispatched calls in 2005. In the first six months of 2006 2491 case numbers were assigned and 523 dispatched calls were completed.

# City of Euharlee

In addition to the Police Chief and the Assistant Chief, Euharlee currently has seven fulltime patrolmen and two part-time patrolmen. There is one support personnel staff member. It currently has 2.16 police officers for every 1000 residents, which is significantly below the typical rates of cities of comparable size in Georgia, the South, and the U.S.. Assuming the city maintains a ratio of 2.16 officers per 1000 residents, the City anticipates it will need 41 police officers by the year 2025.

The average number of calls per day requiring police officer response almost doubled from five calls in 2002 to nine calls in 2004. That number is expected to reach 20 calls per day by 2009.

The city has encouraged the Police Department to develop a ten-year capital improvement plan to help the city plan for the anticipated expenditures associated with the department's future needs.

# City of Kingston

The City of Kingston currently has 3 full-time officers and 2 part-time officers. Police coverage is provided 24/7. In 2005, Kingston police responded to 1,825 calls for assistance.

# City of White

The city of White currently has just one full-time police officer. It does not currently offer 24/7 police coverage and relies on the Bartow County Sheriff's Office for assistance during hours of non-coverage. In 2006, city police have averaged approximately 100 calls for assistance each month.

# City of Cartersville

The City Police Department provides primary law enforcement to the city. This department consists of 60 professionals. The men and women who serve as Cartersville's law enforcement officers are dedicated, focused, and responsive to the needs and wishes of the community. The department proactively strives to improve services through innovative uses of technology, continuing education, training and the ever-present desire to make the Cartersville Police Department the best it can be.

Cartersville Police Department is structured around two major divisions:

### Uniform Division

The Uniform Division is responsible for traffic enforcement, crime suppression, and crime prevention. Specialty units include a three officer Traffic Enforcement Team and a one-officer, one dog Canine (K-9) Unit. Services are provided 24 hours a day with four officers on duty at all times.

Criminal Investigations Division (CID)

The CID has nine staff members. The CID is responsible for the investigation and prosecution of criminal offenses. CID's Drug Interdiction Unit is responsible for cases involving controlled substances.

The Cartersville Tactical Team is comprised of officers from each of the two divisions. Team members are trained to serve on an entry/security, counter-sniper, or negotiation team and may perform specialized roles such as tactical medic, chemical munitions officer, or team commander.

The Cartersville Police Department is dedicated to the training and leadership development of its officers. The department uses a combination

| Inventory of Police Facilities |             |  |
|--------------------------------|-------------|--|
| Facility                       | Square Feet |  |
| Police Department              | 11,484      |  |
| Weight Room                    | 364         |  |
| Storage Buildings (2)          | 320         |  |
| Class Room (Firing Range)      | 1,200       |  |
| Storage (Firing Range)         | 180         |  |
| Storage (Weight Room)          | 364         |  |
| Storage (City Shop)            | 1,000       |  |
|                                | 14,912      |  |

of in-service training and state and federal academy training, as well as other private facilities to maintain the professional capabilities of the department. By dedication to training and leadership development, the department is able to meet its objective of providing competent, efficient law enforcement to Cartersville residents.

Other services provided by Cartersville Police Department include a uniformed School Resources Officer assigned to Cartersville High School, and a uniformed Housing Authority Officer who works a flexible shift depending on the needs of Cartersville Housing Authority. Cartersville Police Department also conducts a citizens' Police Academy to provide interested parties with an opportunity to learn what the police do. The "academy" is an excellent opportunity for Cartersville PD to interact with the public t makes the community a better and safer place to live.

Police station headquarters is centrally located at 178 West Main Street in an 11,484 square foot brick building. All police services, including Municipal Court are based out of this facility. The facility was built in 1957 as a funeral home and was acquired by the City in 1993.

#### Plans for capital improvements.

The building is adequate in size at this time. About 20 percent of the floor space is being used for records storage. As the staff grows, the City will need to procure storage space at other locations to free up the more valuable office and station space for the department.

It is expected that future expansions or replacement of the facility will be required as the city continues to grow. An impact fee based on the current level of service would provide funding

#### Police Department Level of Service and Future Demand

| Level Of<br>Service<br>Measure | Current<br>Inventory | Future Demand<br>based on<br>CURRENT LOS |
|--------------------------------|----------------------|--|
| Square Feet                    | 14,912               | 8,585                                    |
| Hand Guns                      | 69                   | 40                                       |
| Shotguns                       | 44                   | 25                                       |
| Sub Guns                       | 5                    | 3  |
| Rifles                         | 2                    | 1  |
| Gas Gun                        | 1                    | 1  |
| Shields                        | 2                    | 1  |
| SWAT Helmets                   | 10                   | 6  |
| Radios                         | 52                   | 30                                       |
| Vests                          | 52                   | 30                                       |
| Gas Masks                      | 52                   | 30                                       |
| Riot Helmets                   | 42                   | <sup>24</sup><br>245                     |

for 8,585 additional square feet of facility space. In addition, at the current LOS, 191 pieces of equipment would be demanded. The preliminary plan is to add a second floor to the flat-roofed parts of the existing buildings. The building is adequate in quality at this time with the exception that minor renovations are needed to improve internal storage, locker rooms and shower facilities.

In conjunction with the Cartergrove development, a development agreement was negotiated to provide for the direct impacts of public safety for this development. The developer is contributing both the site and program costs to locate a public safety facility within the development boundaries.

# **Fire Protection**

The Bartow County Fire Department (BCFD) provides fire coverage all jurisdictions in Bartow County other than Cartersville. In many cases, intergovernmental agreements provide for some type of shared-cost arrangement with individual cities. Bartow County handles all personnel and staffing issues.

BCFD currently operates thirteen fire stations throughout the county. An additional station is under construction in the Barnsley Gardens area. The stations and their locations:

Station 1 – Headquarters 5435 Hwy. 20 NE Cartersville, Ga. 30121

Station 2 - Cassville 130 Fire Tower Rd. Cartersville, Ga. 30120

Station 3 – Euharlee 190 Covered Bridge Rd. Euharlee, Ga. 31020

Station 4 – Allatoona 5303 Groovers Landing Rd. SE Acworth, Ga. 30101

Station 5 19 West Rocky St. NE. White, Ga. 30184

Station 6 43 Fourth St. Emerson, Ga. 30137 Station 8 189 Olive Vine Church Rd. Rydal, Ga. 30171

Station 9 614 Hwy. 61 SW Cartersville, Ga. 30120

Station 10 6793 Hwy. 140 NW Adairsville, Ga. 30130

Station 11 11 Euharlee St. Taylorsville, Ga. 30178

Station 12 1177 Sugar Valley Rd. Cartersville, Ga. 30120

Station 13 293 Wilderness Camp Rd. White, Ga. 30184

| Station 7           | Station 15             |
|---------------------|------------------------|
| 30 West Main St.    | 2124 Hwy. 140 NW       |
| Kingston, Ga. 30145 | Adairsville, Ga. 30130 |

The table below illustrates incident response counts for each station within the county for the years 2003-2005. It should be noted that stations within more populated areas have higher response counts, but may travel shorter distances in order to respond to calls. The station on Sugar Valley Road was recently opened to alleviate demand on other stations within the city of Cartersville.

| Station Location                | 2003 | 2004 | 2005 | Total |
|---------------------------------|------|------|------|-------|
| Station 1                       |      |      |      |       |

# City of Cartersville

For many years, the City of Cartersville relied on volunteer firefighters. In the 1870's and 1880's "reel" or "running" teams provided fire protection for the community. These teams were made up of some of the most prominent young men of the community, and to belong to the team was an honor; to be dismissed from it was a disgrace. By 1909, firefighting became a little easier when the city made use of horses pulling fire wagons carrying barrels of water. Finally in 1918, the City purchased its first motorized fire truck, an American La-France model. The City recently refurbished this old truck, and proudly brings it out for parades and other special occasions.

| Description |                 | Existing<br>Square<br>escription Feet |   |
|-------------|-----------------|---------------------------------------|---|
| 1           | North Erwin St. | 14,500                                | 2 |
| ·           | MLK Jr. Dr.     | 6,657                                 | 2 |
| 3           | West Ave.       | 6,000                                 | 3 |
|             |                 | 27,157                                | 7 |

In the City of Cartersville fire, protection and emergency medical services are provided by the Department to all portions of the city. The Cartersville Fire Department strives to minimize the loss of life and property by providing effective fire suppression, fire prevention, rescue service, and public education to the community. This is accomplished by employing a high degree of professionalism, training, operational readiness and public education. Fire fighters work on a three-platoon system, working 24 hours on duty and 48 hours off duty. Administrative staff members work on 8-hour sifts.

For most of the city's firefighting history, a fire station of some sort has been located at the corner of Church and Erwin Streets. The current two-story brick station at that location was erected in 1917. This building was erected to house the fire and police departments, as well as City Hall. An addition in 1979 provided additional space for modern day fire trucks and equipment. As the city grew, greater fire protection was needed, and now three fire stations protect the town.

#### Station No. 1

Station No. 1 was built in 1916 is an 11,880 square foot building in the center of the City at 19 North Erwin Street. As headquarters, Station No. 1 houses the Fire Chief, Assistant Chief, Trainer, fire inspectors, and administrative personnel.

Station No. 2

Station No. 2 is a 3,750 square foot building located at 1200 West Avenue in the southwest portion of the City. Fire fighters are assigned to each of the three shifts with a minimum of three on duty at all times.

Station No. 3

Station No. 3 is a 5,888 SF building located at 1200 West Avenue in the southwest portion of the City. Fire fighters are assigned to each of three shifts with a minimum of three on duty at all times.

For planning purposes, ISO ratings are used as indicators of the current and desired levels of service. ISO ratings depend, in part, on availability of water and response times—two things that can be affected by actions outside the control of the Fire Department. Drought, road congestion, and patterns of new development can impact the insurance ratings. The ISO rating is 4.

Fire Department personnel attend leadership classes given through the Fire Academy in Forsyth, Georgia, and attend training classes provided by the City Fire Department and Bartow County Fire Department. A Citizens' Advisory Board provides and receives input from local citizens.

The Fire Department serves the entire city. Each station does not act alone; instead, the stations operate as a network to provide fire protection services. Not all stations serve the same types of land uses, nor do they all have the same apparatus. For most fires, two stations respond with fire apparatus. Station No. 1 responds to all alarms with the engine-service and the rescue unit. One engine responds from either Station No. 2 or No. 3 depending on the location of the fire. The strategic placement of personnel and equipment is the backbone of good fire protection. In the event of a fire alarm, one station will respond, with two other stations providing back up. This is the essence of good fire protection planning.

| Level Of<br>Service<br>Measure | Current<br>Inventory | Future Demand<br>based on<br>CURRENT LOS | Future Demand<br>based on<br>DESIRED LOS |
|--------------------------------|----------------------|--|--|
| Square Feet                    | 27,157               | 15,634                                   | 15,310                                   |
| Heavy Vehicles                 | 7                    | 4  | 3  |

## Fire Protection Level of Service and Future Demand

As such, an improvement in any part of the city provides a benefit throughout the city, not just to a single fire district.

### Plans for capital improvements.

In 1998, the Cartersville Fire Department contracted the consulting firm of Mizelle, Hodges & Associates to conduct a fire protection study to assess current and future needs to maintain or improve the City's ISO rating of "4." The department has identified a number of future capital projects, many of which are potentially impact fee eligible. The system is assumed to need one pumper truck per station, plus two older spare vehicles. A ladder truck with a 105-foot ladder is needed to fight fires in the taller buildings such as schools, churches, and industries. The study by Mizelle, Hodges and Associates indicated that to ensure that a station is within 2.5 miles of any potential fire, a new fire station will be needed on the north side of the city. A multi-functional training facility is planned at the public works complex on land currently owned by the City. The facility will include classrooms, a four-story drill tower, a fire and smoke building, a 1,500 square foot combustible liquid pit, two hydrants, a pumper test pit, and a driver training range. The classroom facility will be useful for training all city departments.

To keep fire protection at the existing level of service throughout the planning horizon, two additional fire stations will be needed. Preliminary assessment indicates that one

should be located east of I-75 near Main Street, and the other South of Old Alabama Road. An impact fee based on the current level of service (LOS) would result in a future demand of 15,634 additional square feet and 4 new heavy vehicles. A LOS standard based on the Department's capital plans would result in a future demand of 15,310 additional square feet and 3 heavy vehicles to serve new growth.

# **EMS Services**

The county operates four Emergency Medical Services stations that serve all of Bartow County, including the various municipalities. The following is a brief description of each station:

Station 1 (Main Facility)

5435 Hwy. 20, Cartersville, Ga.

In addition to the Director and Assistant Director, this station employs 18 EMS responders. The station has three EMS trucks that are employed 24 hours a day. There are three eight-hour shifts; each truck carries two responders per shift for a total of 6 responders per shift. In 2005, units from this location responded to 5,575 calls for assistance.

### Station 2

6<sup>th</sup> Street, Emerson Ga.

Station 2 has two EMS trucks. One truck is in service 24 hours a day across three shifts. Two responders staff this truck each shift. The second truck is in service from 7:00 am to 5:00 pm daily. Two additional responders staff this truck. The station employs a total of eight EMS responders. In 2005, units from this location responded to 1,906 calls for assistance.

### Station 3

Covered Bridge Road, Euharlee Ga.

Station 3 utilizes one EMS truck which is staffed 24 hours a day across three shifts. Two responders staff the station per shift, for a total of 6 responders. In 2005, units from this location responded to 907 calls for assistance.

### Station 4

Hwy. 140 West, Adairsville, Ga.

Station 4 utilizes one EMS truck which is staffed 24 hours a day across three shifts. Two responders staff the station per shift, for a total of 6 responders. In 2005, units from this location responded to 1,195 calls for assistance.

# Senior Services

# Bartow Senior Services

Bartow Senior Services (BSS) operates two senior centers that offer a variety of social and informational programs for the county's senior residents. Residents from all over the county, including residents from Adairsville, White, Emerson, Euharlee, Kingston and Emerson attend popular BSS events.

The largest center, located on Beavers Drive near the Hamilton Crossing Park Complex, opened in 2005 and has a capacity of 300. The second center, located on Zena Drive in Cartersville, has a capacity of approximately 200. The Zena Drive location continues to experience space shortages during popular events even after the opening of the Beavers Drive location. The Beavers Drive location currently has sufficient capacity for most programs, but recent trends in new program participants and general population growth over the coming years will soon tax this facility as well. In 2006, an average of 40 new participants per month are attending BSS events.

The chart presented on the following pages entitled *Bartow Senior Services Monthly Participation Counts, January 2004 – May 2006* summarizes the trend in the number of program participants each location has served on a monthly basis since 2004. By November of 2004, the Zena Drive location was serving over 4,000 seniors each month. With the opening of the Beavers Road location in January 2005, participation at the Zena Drive location declined slightly from the highs of November 2004, but participation at Zena Drive remained steady through the most active months of the year in 2005. Participation in the early months of 2006 has fluctuated around 3,000 persons per month.

Participation at the Beavers Road location in 2005 fluctuated around an average of 1,100 per month. Given its location and proximity to underserved areas of the county, participation rates at this location will undoubtedly increase over the coming years.

BSS has recently hired a program coordinator who will develop an outreach program to take informational programs into the smaller communities throughout the county. These outreach programs will be particularly attractive to those seniors who are not able to travel easily outside of their own communities to programs at the BSS centers.

# City of Euharlee Senior Services

The city of Euharlee has recently constructed its own senior center as part of its new City Hall Complex. The complex contains a meeting room that can accommodate up to one hundred persons for meetings and seventy-five for meals. The center includes a kitchen with a commercial grade stove, a refrigerator and microwave oven. Euharlee Senior Citizens currently hold regular monthly meetings with average attendance between 30-40 people.

The senior population in Euharlee is expected to grow to over 3,000 by 2025. The city estimates its current facility can serve a senior population of up to 1,000. Population projections suggest the city will reach this figure by the year 2015, by which time the city

will need to expand its current facility or construct a new facility in order to adequately serve its senior population between the years 2015-2025.

# Parks and Recreation

# Bartow County Parks and Recreation

The Bartow County Parks and Recreation Department operates seven parks and three greenspace areas. Total estimated park visitation in 2005 was 36,456. The county's facilities and amenities are described below.

### **Bartow Carver Park**

This 435 acre park is located on Glade Road on Lake Allatoona near Red Top Mountain State Park. Facilities include baseball/softball field, a lake, picnic facilities, a children's playground, public restrooms and walking/jogging trails. Rental facilities also are available for private gatherings.

### **Bartow Gatewood Park**

Located off of Spur 20 Road near Allatoona Dam, this 260 acre park includes the lake, picnic facilities, a childrens playground, public restrooms and walking/jogging trails.

### **Center Road Park**

Located on Center Road at Spur 20 Road, resources at this 15 acre park include walking/jogging trails, public restrooms and rental facilities for private gatherings.

### **Hamilton Crossing Park**

Located on Hamilton Crossing Road, this 72 acre park includes baseball/softball fields, basketball courts, football/soccer fields, a gymnasium, a children's playground, public restrooms, tennis courts and walking/jogging trails. The county operates many of its youth sports leagues activities at this location. Rental facilities for private gatherings also are available.

### **Manning Mill Park**

Located near Adairsville, this 44 acre park includes baseball/softball fields, basketball courts, football/soccer fields, a gymnasium, a lake, a children's playground, public restrooms and walking/jogging paths. The county operates some of its youth sports leagues activities at this location. Rental facilities for private gatherings also are available.

### South Bartow Park

South Bartow Park is a relatively small five acre park that offers a baseball/softball/soccer field, playground equipment, a picnic shelter and a 2-mile walking trail.

### **Taylorsville Park**

Taylorsville Park, which is maintained by the county, has a baseball/softball/soccer field.

#### **Beazley Gap Greenspace Area**

This greenspace area of approximately 300 acres is located on Hwy. 140 near the Cherokee County line. The county recently has received a grant to develop the park for limited public recreational use (primarily a walking trail).

#### **Hurricane Hollow Greenspace Area**

This park is located east of I-75 off of Main Street. Hurricane Hollow is approximately 40 acres in size and is adjacent to a larger tract (200 acres) owned by the City of Cartersville (known as Pine Mountain Park). Hurricane Hollow contains hiking trails.

#### Springbank Greenspace Area

This area of approximately 35 acres is located on Hall Station Road between Kingston and Adairsville.

The county also has recently acquired two additional greenspace areas along the Etowah River. One area of approximately 200 acres is located on Paga Mine Road; the second area of approximately 50 acres is located on the river near Euharlee. These areas have not yet been developed.

The county has a contractual agreement with the county school system that allows the county to utilize various school gymnasiums for park and recreational programs. The elementary schools also have playground equipment that is accessible to the public.

The county offers youth recreational programs for baseball, softball, football, cheerleading, soccer, basketball, dance, karate and tennis.

Most of the individual cities have their own public parks. Adairsville has no active public parks within the city limits. The county's Manning Mill Park is close to Adairsville, however, and can serve these residents. Cartersville has an extensive Parks and Recreation system and a detailed description of that system is provided later in this section. The table *"Resource Inventory in Park and Recreational Facilities: Bartow County and Respective Municipalities"* at the end of this section provides a visual summary of the recreational resources available in publicly owned parks in Bartow County.

Parks in the smaller individual cities include the following:

# City of Emerson

#### **Emerson-Allatoona Lake Park**

Emerson maintains a three acre park at 325 Old Allatoona Road. This park, the Emerson-Allatoona Lake Park, includes a building with a kitchen, restroom facilities and a dining hall. Two additional meeting rooms are also available. The park provides a play area for children, a public beach, picnic areas and outdoor grilling equipment.

In addition the former Emerson City Hall is available for public meetings, parties and banquets. It is located at 124 Second Street.

## City of Euharlee

### **Osborn Park**

Located on Covered Bridge Road across from the Covered Bridge, Osborne Park has the following facilities: lighted and fenced baseball/softball fields; lighted and fenced tennis courts; a walking and jogging trail; children's playground equipment; one lighted pavilion; one unlighted pavilion with a BBQ pit. There also are public restrooms and a concession stand.

### **History Park**

The History Park is located on the south side of Covered Bridge Road and contains a number of historic structures, including the Commissary, the Granary, the History Museum, the Traveler's Well, the Old Mill Ruins, and the Covered Bridge.

Euharlee's facilities are used for a number of community activities. The Commissary is used as a community meeting hall and is available for rent by members of the community for private functions. Each year the parks are utilized for the Euharlee Festival, the Euharlee PowWow, and the Duck Race.

The baseball and softball fields are used by Woodlands Middle School at Euharlee for baseball practice and ball games.

# City of Kingston

### **Kingston City Park**

Located in the City Hall area, Kingston City Park has a baseball field, a playground, a large open space that can be used for soccer or other field sports, a public restroom and several small pavilions with individual picnic tables. A small skateboarding area will be opening soon.

# City of White

### James A. White Memorial Recreation Complex/Clifford Reynolds Park

Located across from City Hall, this complex includes a gymnasium, a small gazebo, a baseball/softball field and children's playground equipment.

# City of Cartersville

Cartersville has one of the preeminent parks systems in Georgia. The City of Cartersville operates park and recreation services across 632 acres throughout the city without any restriction based on place of residence. The Cartersville Parks and Recreation Department manages a broad range of beautiful, functional, and well-maintained

facilities that are conveniently located across the City. With an average of over 11 acres of developed parkland per 1,000 population, Cartersville exceeds the "ideal" standard of 10 acres set by the National Recreation and Parks Association. Recreations opportunities abound for biking, hiking, jogging, swimming, tennis, participation in a variety of organized leagues, and other activities. However, reaching the Hispanic population continues to be an issue of concern. As a group, Hispanics are underrepresented in sports leagues organized by the City of Cartersville. The Youth Athletic Mission Statement is to provide quality "recreational" athletic programs for the youth of our community where participation, instruction, sportsmanship and teamwork and achievement in a safe and enjoyable environment. The Cartersville Parks and Recreation Department is a member of Georgia Recreation and Park Association and National Recreation & Park Associations.

The Cartersville Parks and Recreation employs 24 full-time, 12 part-time and up to 35 seasonal employees. A 7-member Recreational Advisory Board provides citizen oversight to the Parks Department and makes recommendations on park-related issues to

| Component<br>Type  | Current<br>Inventory<br>(2005) |  |
|--|--------------------------------|--|
| Ball Fields  | 15                             |  |
| Track/Trail*   | 4                              |  |
| Tennis Courts  | 16                             |  |
| Playgrounds  | 3                              |  |
| Pavilion/Shelters  | 5                              |  |
| Soccer Fields  | 5                              |  |
| Pool   | 1                              |  |
| Basketball Courts  | 2                              |  |
| Multi-use Fields   | 2                              |  |
| Gyms/Centers   | 1                              |  |
|  |                                |  |
| *Inlcudes jogging or running track, walking trail and Vita Course. |                                |  |

the City Council. This Board meets at least six times per year. To ensure high quality instruction, the Parks Department sponsors training and certification programs for all coaches in its youth programs. The following table provides a summary of the total number of facilities of various types across the city's park system.

### **Recent Improvements**

The following information includes a sample of the additions and improvements to the Cartersville Parks & Recreation Department system that have occurred during the last decade:

- ✤ Built indoor batting facility for Cartersville High baseball complex.
- Acquired 1.379 acres to add to the Goodyear Clubhouse & parking lot.
- ✤ Poured sidewalks/walking trail for fields 4, 5 & 6 of Dellinger Park.

- Installed the portion of the Etowah Riverwalk trail from Dellinger Park to the Etowah River.
- ✤ Opened the Gymnastics Plus gymnastics center.
- ✤ Replaced the playground system at Jones Street Park.
- Acquired 235.204 acres for the Milam Farm Park. Completed area sidewalk/walking trail.
- Acquired 3.957 acres from Shaw Family Holdings for a pedestrian walkway along the Old Iron Bridge; installed ornamental fencing.
- Acquired 225 acres for hiking and archery in the Pine Mountain area; completed hiking trails.

### **Dellinger Park**

Dellinger Park is Cartersville's premier park facility and is the location of the main office for the Cartersville Parks and Recreation Department. Dellinger Park has a total of 111 acres, plus the 18-acre "Deerfield Practice Fields." Entrances to the park are on Pine Grove Road and Etowah Drive. The park was originally built in 1975 on a 40-acre tract of land donated to the City by the Dellinger Family. The park was expanded in 1980 on an additional 10-acre tract of land donated by the Dellinger Family. A third expansion was completed in 1983, on a 61-acre tract of land purchased by the City. In addition to 40 acres of undeveloped green space, Dellinger Park has:

- ✤ Thirteen lighted tennis courts;
- ✤ Six softball fields;
- ✤ A football/soccer field with 440 yard track;
- Two playground areas;
- Two outdoor basketball courts;
- Olympic size swimming pool;
- ✤ 2 mile and 1.3 mile walking/running trail with exercise stations;
- nineteen hole putt-putt golf course;
- ✤ a 4 acre lake and an island gazebo; and
- ✤ Four large picnic shelters and a gazebo.

### **Clearwater Street Park**

Clearwater Street Park is 7.8 acres. Facilities include:

- Four Baseball fields, also known at the ATCO facility. These include the Rudy York Field, the Joe Frank Harris Field, and two new fields;
- Three Tennis Courts;
- ✤ Five Batting Cages;
- Comfort/Concession Stand; and
- ✤ A Clubhouse.

### **Cartersville Soccer Areas**

Soccer areas include two non-adjacent facilities:

The Deerfield Practice Fields include 18 acres that are used for both soccer and football. These fields are grassed, but unlighted.
The Cartersville Soccer Complex induces four new regulation soccer fields. These facilities are adjacent to and on 13 acres of land owned by the Cartersville Middle School are a joint-use project of the Parks Department and School Board. Concession stands are available. These fields have minimal seating and restroom facilities, and only two fields are grassed at this time.

#### **Cartersville Baseball Complex**

The baseball complex on Sugar Valley Road is a 32-acre facility, built in 1992, that has:

- Five baseball/soccer fields;
- Two batting cages;
- Concession stand with restrooms;
- A 1-mile walking/running trail with 18 exercise stations; and
- ✤ A handicap-accessible playground and picnic tables.

#### Aubrey Street Recreation Gym and John H. Morgon Gym

The Aubrey Street Recreation Gym and the John H. Morgon Gym sponsor such programs as youth basketball, adult basketball and free play basketball.

#### **Civic Center and Gymnastics Complex**

Cartersville's Civic Center and Gymnastics Complex are located adjacent to one another in town between West Main Street and Cherokee Street. The 12,000 square foot Civic Center can seat 700-auditorium style and is used for a wide variety of events and meetings. The Gymnastic Center and Gymnastics Plus on Cherokee Street are well equipped with quality apparatus. The Belarus National Men's Gymnastic Team chose Cartersville as their practice site during the 1996 Olympics. Programs are offered for boys and girls 2 and up and include developmental and competitive gymnastics.

#### Summer Hill School

In 2001, the Etowah Area Consolidated Housing Authority took over ownership of the former school and the adjacent seventeen-acre recreational complex. This property, which had been dormant for many years, now includes a newly renovated baseball field, a nature walk, a new educational facility, a fully equipped gymnasium, tennis court, swimming pools, public picnic areas, and more. The project is a partnership of the EHA, City of Cartersville, Bartow County, Cartersville Parks & Rec., local schools of higher learning, and more. It has stirred a longing in the hearts of the graduates of Summer Hill High School to see a part of their heritage renewed, preserved, and made useful.

#### **Neighborhood Parks**

Three one-acre "vest-pocket" parks, outfitted with playground equipment and basketball courts, are popular places for children and families. They are:

- Fite Street Park
- Jones Street Park
- ✤ Martin Luther King Jr., Drive Park

#### Plans for Capital Improvements

Cartersville Parks Department's facilities are so well used that they are now to the point of overcrowding. Registration in youth league programs is nearly at capacity. Adult league programs have been shifted to late evenings, with start-times as late as 10PM, in order to accommodating the burgeoning youth programs. The public has spoken out strongly in support of new facilities. As the city continues to grow it is anticipated that future park projects will be required in order to serve that growth. Parks acreage and facilities that serve new growth can be impact fee eligible. An impact fee based on the current level of service would provide funding for 423 additional acres of parkland and a total of 36 park facilities. The "desired" demand figures are based on current capital plans of the department. Note that not all categories are included in those capital plans. Compared to the future projects planned by the Department, the current LOS would

| Level Of<br>Service<br>Measure | Current<br>Inventory | Future Demand<br>based on<br>CURRENT LOS | Future Demand<br>based on<br>DESIRED LOS |
|--------------------------------|----------------------|--|--|
| Acres                          | 632                  | 423                                      | -  |
| Ball Fields                    | 15                   | 10                                       | 9  |

| Tennis Courts                  | 16                   | 11                                       | 7  |
| Playgrounds                    | 3                    | 2  | -  |
| Pavilion/Shelters              | 5                    | 3  | -  |
| Soccer Fields                  | 5                    | 3  | 4  |
| Pool                           | 1                    | 1  | 1  |
| Basketball Court               | 2                    | 1  | -  |
| Multi-use Fields               | 2                    | 1  | -  |
| Gyms/Centers                   | 1                    | 1  | 1  |

### Parks & Recreation Level of Service and Future Demand

\*Inlcudes jogging or running track, walking trail and Vita Course.

result in some impact fee eligible projects in excess of those being considered in some categories (ball fields, tennis courts) and one category where the plans result in a demand beyond that based on the current LOS (soccer fields).

In conjunction with the Cartergrove developers, a development agreement was negotiated to provide for the direct impacts of parkland and connectivity for this development. The developer is contributing both the site and program costs for a future recreation facility.

The table below describes all park facilities within the county and its municipalities.

## Resource Inventory in Park and Recreational Facilities Bartow County and Respective Municipalities

# Intergovernmental Coordination

## Introduction

Bartow County is located adjacent to the counties of Cobb, Gordon, Floyd, Pickens, Cherokee, Paulding and Polk. Many of the adjacent counties are used for comparison in the tables and figures within this report. The County cooperates on numerous policies and services with its municipalities, which include Cartersville, Euharlee, Emerson, White, Taylorsville, Kingston and Adairsville. Two school districts, Bartow County Public Schools and City of Cartersville Public Schools are housed within county boundaries.

## Formal Collaborative Arrangements

Bartow is an active participant in the planning process with neighboring counties through the Coosa Valley Regional Development Commission, and collaborates with other communities to protect water resources though the Lake Allatoona Preservation Authority, a state statutory authority and the Army Corps of Engineers. The County coordinates transportation planning with the Atlanta Regional Commission. Bartow County has recently been added to the non-attainment region of the metro Atlanta area for purposes of improving air quality. It is also included in the Etowah Habitat Conservation Planning District (currently being formed) with cities and counties in Etowah Basin, and is a member of the Metro Atlanta Water Planning District.

The county works closely with the Etowah Area Consolidated Housing Authority, which serves over 700 clients in the service area. There are collaborative arrangements with the municipalities on the Convention and Visitors Bureau, Keep Bartow Beautiful programs, recycling programs, animal control services, emergency medical services, indigent (especially elderly) services. A collaborative arrangement for a public safety training facility is under discussion. An arrangement with North Metro Technical College to provide training for local businesses is also an example of both interjurisdictional and public/private cooperation. Cooperative service arrangements exist with other governments to provide public safety, libraries and solid waste services (through the Bartow Solid Waste Authority). A recent example of cooperative arrangements deals with recreational trails and archeological and green space sites including one located on three former Native American burial mounds.

## Partnerships

The county works to establish partnerships with private industry and business organizations. The Bartow County Environmental Management System is an example of a local public/private partnership which uses state and federal funds to development model environmental management programs. In addition to collaboration with various Chambers of Commerce in the area, the county is engaged in a number of economic development initiatives with other governments. These include the Cartersville-Bartow County Department of Economic Development (CBCDED), City of Carterville Development Authority, Bartow County Development Authority and the City of Adairsville Development Authority. These authorities focus much of their efforts on business recruitment. An example of the positive effect of such cooperation is the recent recruitment of the Toyo Tire Company. This successful recruitment was also in collaboration with state of Georgia officials and officials from utility companies. It brought over 100 jobs to the area and netted an increase of 100 million in local investment in 2005. In addition, the CBCDED has the following bank of industrial properties to attract business to the county:

- Cartersville-Bartow County Corporate Park—new with 846 acres for development.
- Cartersville West Industrial Park—116 acres in 547 acre park zoned heavy industrial; convenient to I-75; rail access to airport; full infrastructure.
- Georgia North Industrial Park—almost completely built over, 60 remaining acres; currently includes metal fabrication, compaction roller manufacturer, diesel engine manufacturing, distribution warehouse.
- Adairsville Industrial Park—178 total acres, completely built out; includes carpet manufacturing, wood products manufacturing, concrete products manufacturing and distribution.
- CSX Industrial Park---100 acres, tied to CSX Railroad operations. 15 remaining acres; currently housing operations of Trinity Rail, Gerdau Ameristeed and Graham Packaging.

In 2000, the county, municipalities, school districts and major businesses collaborated on a strategic planning process including public hearings, stakeholder meetings, and resulted in the establishment of goals, objectives and clarification of priorities for the county as a whole.

## School boards

The county includes two school districts: Bartow County Schools and City of Cartersville Public Schools. They are independent systems but have collaborative arrangements with county and city governments for security, recreational use of school facilities and community organizational use of school facilities. The school systems are included in planning meetings and were an integral part of the 2000 strategic planning process. Data presented on the schools systems in the two following sections are taken from the Georgia County Guide for 2005-2006.

Two figures are presented below. As the first figure illustrates, Bartow County and the City of Cartersville pay school system employees at rates comparable to the state average. However, a comparison of teacher salaries for City of Cartersville, Bartow County and selected nearby comparison city and county schools reveals that teachers within the two systems are paid at comparatively lower salaries than their counterparts in other communities.

## School System Personnel Salaries

## City of Cartersville Public Schools

The City of Cartersville school system served 3,769 students in K-12 in 2003-2004. Approximately 13% of students were enrolled in gifted programs and about 10% of students were identified as disabled. Six percent of students were identified as having limited English proficiency. Almost 40 percent of students received free or reduced lunch during that year. Forty-six students in grades 9-12 were identified as dropouts, a rate of 4.2%. The City of Cartersville School Board expended \$6,867 per student in 2003-2004, slightly higher than the state average expenditure per student (\$6,728). One hundred seventy-seven students graduated in that year and 70% of those students were eligible for Hope Scholarships. The school system employed 16 administrators, 21 support personnel and 259 teachers in four K-12 schools. The following figures illustrate revenues and expenditures for City of Cartersville schools. Public School Revenue Sources, City of Cartersville, 2003-2004

Public School Expenditures in Percent, City of Cartersville, 2003-2004

## Bartow County Public Schools

Bartow County Public Schools enrolled 13,368 students in K-12 during the 2003-2004 school year. Ten Pre-K programs also operated within the county enrolling 378 students. Approximately 5.7% of students were enrolled in gifted programs and about 14.7% of

students were identified as disabled. Two percent of students were identified as having limited English proficiency. Almost 40 percent of students received free or reduced lunch during that year. Three hundred twenty-seven students in grades 9-12 were identified as dropouts, a rate of 8.0%. Bartow County's School Board expended \$6,683 per student in 2003-2004, slightly lower than the state average expenditure per student (\$6,728). Five hundred fifty-eight students graduated in that year and 75% of those students were eligible for Hope Scholarships. The school system employed 63 administrators, 76 support personnel and 962 teachers in nineteen K-12 schools. The following figures illustrate revenues and expenditures for Bartow County schools.

Revenue Sources, Bartow County Schools, 2003-2004

Expenditures, Bartow County Schools, 2003-2004

## Major Grants and Funding Initiatives

Recent examples of collaborative major grant awards within the county include the TEA/ Transportation Enhancement Activities Grant from the State of Georgia Department of Transportation for \$900,000 to purchase an archeological site. City of Cartersville was awarded funds to build a bridge to connect this archeological site to a recreational trail system. The county and municipalities have used Community Development Block Grants to fund a Boys and Girls Club facility, an emergency children's facility, the Hickory Log School for mentally disabled men, and a home for victims of domestic violence. Department of Homeland Security funds were used to hire 12 additional firefighters.

Bartow County and the City of Cartersville worked to develop a short term transportation plan to identify priorities and secure funding through SPLOST funds. Current SPLOST funding has been achieved for roads, fire stations, library improvements, restoration of historic courthouse, youth activities centers, and a maintenance shop for county vehicles and equipment. Funds have also been awarded to build a fleet of eight, 12-15 passenger vans to provide on call transportation services to disabled and elderly citizens, and other residents of the county.

# Transportation

Bartow County and its municipalities have been very proactive in recent years in the area of transportation planning, as they have in all aspects of long-range strategic planning.

Bartow County's *1997 Growth Management Plan* identified a number of short-term transportation projects that required attention over the coming years. Many of these projects have been completed while others are still in various stages of progress. These projects included:

### SR 20

The Georgia Department of Transportation (GADOT), in consultation with Bartow County, is currently upgrading and adding turn lanes and passing lanes to SR 20 east from I-75 the Cherokee County line. Also, plans to make SR 20 a four-lane, divided median highway from I-75 to US 411 are currently under environmental assessment.

### Euharlee Road

Plans are currently under development to upgrade Euharlee Road to three lanes (adding turn lanes in congested residential areas) between Cartersville and Euharlee. Conceptual plans for a connector road between Euharlee Road and Burnt Hickory Road have been developed, and federal highway funds have been approved for this project. Plans to add turn lanes from Euharlee Road onto SR 113, and to replace the bridge over the Etowah River, also are being developed.

### Grassdale Road

Improvements to the intersection at Grassdale Road and Peeples Valley Road have been completed. The county has developed plans to realign Iron Belt Road to make it directly accessible to US 41 in order to ease congestion at the intersection of Grassdale and Iron Belt roads.

### Burnt Hickory Road

Turning lanes and traffic lights have been added at intersection with Mission Road; blinking lights have been installed at intersection with Sugar Valley Road. The City of Cartersville has realigned Burnt Hickory Road to connect to directly to Douthit Ferry Road at SR 113.

### Old Alabama Road

Plans are underway to widen Old Alabama Road in the southern part of the county, and to directly connect Old Alabama Road with Red Top Mountain Road just east of US 41. Once completed, this thoroughfare will be designated as (new) GA 113. This expanded highway will serve a growing population in southern Bartow County and will continue to serve as a southern bypass around downtown Cartersville for growing populations in western parts of Cartersville, the City of Euharlee and surrounding unincorporated areas. The Old Alabama Road/Red Top Mountain Road Connector also will serve as a northern bypass for the city of Emerson, re-routing commuter traffic away from downtown

Emerson and directly to Red Top Mountain Road, US 41 and I-75. Right-of-way acquisition is currently being completed; construction of the bypass around Emerson is expected to begin in FY 2007 and will take 12-18 months to complete.

#### New Hope Church Road

The county has completed road improvements at Allatoona Elementary School.

*Mission Road* Turn lanes have been completed.

#### Peeples Valley Road

The intersection at Peeples Valley Road and Old Grassdale Road has been reconstructed, as has the intersection at Peeples Valley Road and Grassdale Road. The intersection at Peeples Valley Road and SR 61-US 411 near SR 20 also has been improved.

#### Glade Road

Improvements to intersections at Misty Valley Road and Apache Road are in the concept design stage. Improvements include the addition of turn lanes and improved site distances.

#### Shinall-Gaines Road

Improvements are in concept design stage.

## **Recent Transportation Studies**

In anticipation of the development of the new twenty year Comprehensive Plan, the county and the city of Cartersville, in conjunction with the Georgia Department of Transportation (GDOT), contracted with Jordan, Jones & Goulding, Inc (JJ&G) to conduct an analysis of transportation issues throughout the county, including all municipalities. Officials from the cities of Emerson, Euharlee and Adairsville also actively participated in the project. JJ&G's analysis, submitted in November 2000, includes data from the GDOT and other agencies on the functional classification of county roads, number of lanes, posted speed limits, traffic signal information, railroads and railroad crossings, bridges, drainage structures and alternative transportation modes including bicycle paths, rail facilities and airports. Input from public officials, City and County staff and local citizens identified additional transportation problem areas to be addressed by the study.

JJ&G also created GIS-based deliverables that were used to illustrate crash data, traffic counts, traffic control, railroad grade crossing locations, bridge and drainage and other pertinent information. Level of service (LOS) analysis was conducted to identify locations characterized by abnormally high crash and capacity rates and other safety problems. Finally, an inventory of potential transportation improvement projects, including information on the type of improvements needed, estimated length of project and cost estimates, were identified designed to address the identified problem areas.

Details on the results of this study can be found in the report *City of Cartersville/Bartow County Short Term Transportation Plan 2000* which is on file with the county.

## Roads

Roads in the City of Cartersville form a network of interlinked and inter-related segments, each of which may have its own capacity or surface condition issues. The City has identified current and future needs of the road network, as well as potential service areas.

## **Roadway Descriptions**

To determine existing traffic conditions in the city, an inventory was made of the major roads and connections. The Federal Functional Classification system was used to classify the different streets and highways according to the character of the service they are intended to provide. This process recognizes the individual facilities do not serve travel independent from the rest o the system. Functional Classification defines the roles that each type of facility plays in this process.

## Interstates

I-75 is a six-lane median divided freeway with a posted speed limit of 70 mph. Interchanges within the City include Red Top Mountain Road and Main Street. The land uses at each intersection include:

Red Top Mountain--unsignalized ramps at Red Top Mountain Road is undeveloped. Main Street—Mostly undeveloped with small out parcels of commercial.

## Arterials

SR 61 (West Avenue/Dallas Road/Old Dallas Highway). This road runs north from Dallas to Cartersville and beyond. This road is primarily a two-lane road with left and right turning lanes at intersections. It has posted speed limits of 45 miles at Douthhit Ferry Road and 55 mph at Old Alabama Road. Land uses along SR 61 are residential with some commercial and undeveloped/agricultural, in addition to the city/county airport is located at the intersection of SR61 and Old Alabama Road.

US 41. This is a four-lane median divided road with a speed limit of 55 mph that runs northwest-southeast from Cartersville through Emerson and beyond. The adjacent land uses near the unsignalized intersection with Red Top Mountain Road are industrial and undeveloped/agricultural.

Old Alabama Road is currently a two-lane road with a speed limit of 45 mph. It runs eastwest from SR 61 through Emerson to SR 293. The adjacent land uses are primarily residential and undeveloped/agricultural.

Douthhit Ferry Road is currently a two-lane road with a speed limit of 35 mph near the study intersections. It runs north-south between Old Alabama Road and Burnt Hickory

Road. The adjacent land uses are primarily residential and institutional with a commercial node near the intersection with Old Mill Road and West Avenue.

Old Mill Road is a two lane road with a posted speed limit of 35 mph that runs northeastsouthwest from downtown Cartersville to Walnut Grove Road. The land uses along Old Mill Road is primarily light industrial and commercial.

SR 293 (Tennessee Street) is a two-lane road with a posted speed limit of 55 mph that runs northwest-southeast from Cartersville to Emerson and beyond. The adjacent land uses are a mixture of commercial, residential, industrial, and undeveloped/agriculture.

Pine Grove/Walnut Grove Road is a two-lane road with a posted speed limit of 30 mph at the study intersection. It runs northeast to southwest from Etowah Drive, then northwest to Old Mill Road. The adjacent land uses along Pine Grove are primarily residential with middle, elementary, and primary schools at the intersections of Douthhit Ferry Road and Etowah Drive. There is a mixed use commercial and residential development under construction in the northeast quadrant of the intersection of Douthhit Ferry Road.

US411 SR20 SR 113 SR 140 Cassville-White Road Peeple's Valley Road Tennessee Street SR 20/Canton Highway SR 293 Walnut Grove Road Etowah Drive Porter Street Erwin Street Martin Luther King Drive Church Street

## Collectors

Summit Ridge Drive and Circle are narrow roads widths a posted speed limit of 25 mph that run east-west from the Royal Oaks Golf Course to SR 61. The adjacent land uses along Summit Ridge Drive and Circle are residential and undeveloped/agricultural.

Bates Road is a narrow two-lane road with a speed limit of 35 mph that runs north-south from Old Alabama Road to Green Ridge Road, where it continues as Lead Mine Road to Dabbs Bridge Road. The adjacent land uses along Bates Road are residential and undeveloped/agricultural.

P.M.B. Young Road is a narrow two-lane road with an assumed speed limit of 25 miles that runs south to summit Ridge Drive. The adjacent land uses along P.M.B. Young Road are residential

Stairdust Trail is a narrow two-lane road with an assumed speed limit of 25 mph that runs south to Summit Ridge Drive. The adjacent land uses along Stardust Trail are residential.

## Recent City LOS Analysis

Intersection AM and PM peak hour turning movement counts were recently analyzed as part of the "Traffic Impact Study for the Dellinger Tract," as referred to and made a reference to herein. Counts were collected at 11 intersections on August 31 2004 and September 1 2004 and on September 9<sup>th</sup> and 10<sup>th</sup> 2004 for the following intersections:

- ✤ SR 61 and Summit Ridge Drive;
- Old Alabama Road and SR 61;
- ✤ Old Alabama Road and Douthhit Ferry Road;
- Old Alabama Road and Bates Road;
- ✤ US 41 and Red Top Mountain Road;
- ✤ I-75 Northbound Ramps and Red Top Mountain Road;
- I-75 Southbound Ramps and Red Top Mountain Road;
- SR 293 and Allatoona Dam Road;
- Douthhit Ferry Road and Pine Grove Road;
- Douthhit Ferry Road and Old Mill Road; and
- Douthhit Ferry Road and SR 61 (West Avenue).

The turning counts for the above intersections were analyzed for Level of Service. Most of the study intersections are currently operating at acceptable levels of service during both the AM and PM peak hours. Three intersections were found to have LOS deficiencies in the AM or PM Peak hours. Installation of traffic signals would be expected to mitigate these delays. Studies would be needed to determine if installation at these locations are warranted.

| Selected Intersections            |       |      |  |  |  |  |  |  |

Field surveys were conducted of specific intersections identified by Bartow County and Cartersville staff as problem locations. A summary of these site investigations for the City of Cartersville, their probable causative factor and potential corrective measures are listed below:

### Cherokee Avenue

Bartow Street Intersection—Peak hour congestion. All approaches are one lane, with STOP control. Conduct a signal warrant study to determine the feasibility of installing a traffic signal.

Cassville Road/Fite Street/Wofford Street—Safety and congestion problems due to this effectively being a five-legged intersection. Sight distance restrictions on the SB Cassville Road approach contribute to a high accident rate. Conduct a signal warrant study. Also, examine the feasibility of lowering the crest vertical curve on Cherokee Avenue west of Cassville Road.

#### Etowah Dive

Old Mill Road Intersection—Peak hour congestion associated with school traffic. All approaches are one lane.—Widen to add turn lanes on approaches and signalize North Erwin Street.

Porter Street Intersection—Accident problems due to sight distance restrictions. The intersection is located in a combined horizontal and crest vertical curve. Vegetation on the west (inside horizontal curve) side of North Erwin obstructs vision for NB vehicles.— Install flashing lights.

#### Tennessee Street

Felton Road—Safety and sight distance restrictions. There is a crest vertical curve on Tennessee Street, just north of Felton Road. In addition, signals are not configured to provide protected left turn phases on Tennessee Street Approaches.—lower crest curve on Tennessee Street north of Felton Road. Modify signals to include protected dual left turn phases. Install "Intersection Ahead" signs on Tennessee Street.

#### West Avenue

Fite Street—Accidents and peak hour congestion due to heavy traffic on West Avenue. There is a STOP control on the minor street (Fite Street) only—Conduct signal warrant study to determine feasibility of installing traffic signal. Possible closing of portion of Fite Street.

Terrell Drive—Peak hour congestion due to turning movements and no separate turn lanes. Widen to add WB left turn lanes.

### Truck Traffic

Etowah Drive – Main Street—Problems with truck routing through this corridor, which is narrow and mostly residential. Lack of positive guide signing and delineation results in truck drivers making wrong turns.

Provide positive truck guidance through this corridor, to include directional signs and enhanced night time delineation. This measure can be considered stopgap; the improvements to Old Alabama road and construction of the Emerson Bypass should remove the majority of truck traffic through this corridor.

### Sugar Valley Road

Burnt Hickory—Congestion at 4-way stop signs. Signalize.

## High Traffic Roads

The following roads were characterized by significant traffic volumes:

- Interstate 75 volumes ranging from 45,000 to 63,000 vehicles per day (vpd) in northern and central Bartow County; over 95,000 vpd in the southern part of the county.
- → Joe Frank Harris Parkway (US 41) through Cartersville 38,000 vpd.
- ✤ Etowah Drive north of West Avenue 17,200 vpd.
- ✤ Tennessee Street (SR 61) through Cartersville 16,800 vpd.
- ✤ Rome Highway (US 411/SR 20) near Floyd County line 17,300 vpd.
- ◆ Old Alabama Road near Douthit Ferry Road 5,800 vpd.
- ✤ Burnt Hickory Road north of Mission Road 8,700 vpd.
- ✤ Canton Highway (SR 20) east of I-75 9,600 vpd.

### High Crash Intersections ("Spots") and Road Sections (pp.2-16 through 2-18)

The study identified sixteen high-crash intersections or "spots" (road lengths of 0.3 miles or less). Most high-crash intersections could be found along three main routes within the county:

- US 41 through Cartersville
- SR 61 and SR 113 (Dallas Highway, Rockmart Highway, West Ave., Tennessee St.)
- Cassville Road (SR 293)

Road sections with average crash rates more than 1.5 times the statewide average for similar facilities include:

- ✤ SR 293 between Kingston and Tennessee Street (SR 61) in Cartersville.
- Tennessee Street (SR 61) in Cartersville, between US 41 and SR 113 (East Main Street).
- US 41 in Cartersville between Martin Luther King Drive and Church Street, and in Emerson near Old Alabama Road.
- ✤ SR 140 west of US 41 in Adairsville.
- ✤ Etowah Drive in Cartersville, between Pine Grove Road and Glen Cove Drive.

## System Deficiencies Analysis

In addition to high crash rates, intersections and roadways may suffer from other deficiencies related to capacity or other safety issues. Based on input from County and City officials and staff and the general public, as well as data related to high traffic volumes and/or poor levels of service, twenty-five intersections were identified as deficient in some significant way.

Based on a LOS analysis designed to identify thoroughfares that were operating at or above capacity during peak hours, the study identified twenty-four roadway sections that were operating at LOS grade "D" or worse. In LOS analysis, roadways are graded A - F, where LOS "A" represents the best traffic conditions and LOS "F" represents the worst. Roadways at LOS "E" are considered to be at physical capacity. LOS "D" ratings are desirable for urban areas in future planning efforts, while LOS "C" is desirable in rural areas.

#### Recommended Improvement Projects

Based on the previous analyses, the study identified a total of sixty-four (64) recommended transportation improvement projects at a total estimated cost of \$161.6 million dollars.

In 2002, Bartow County, in conjunction with GDOT, contracted with Day Wilburn Associates, Inc. to develop a long range transportation plan that would allow the county to effectively deal with increasingly complex transportation issues arising from the high population growth rates facing the county over the next 25 years. With input from elected officials, county staff and members of the general public and community-based stakeholders, as well as analyses of data on the county's transportation system and expected growth patterns through 2030, a set of transportation programs and projects were developed to guide the county in future transportation decisions.

Details of the results of this effort can be found in the report *Long Range Transportation Plan – Bartow County* which is on file with the county. Highlights from the study include (relevant page numbers from original report in parentheses):

### Volume to Capacity Ratios (v/c ratio)

Volume to capacity (v/c) ratios compare a roadway's daily traffic volume to its daily traffic capacity. A ratio of 1.0 means a roadway is operating at full capacity; ratios under 1.0 mean the road is operating at less than capacity, while ratios over 1.0 indicate current road usage exceeds designed capacity. Accepted standards designate a v/c ratio of 0.7 or less as an acceptable level of traffic congestion for any given roadway. Analyses of 2000 data found little or no congestion on Bartow County roads during an average 24 hour period. Three road segments had v/c ratios over 0.5 however. They were:

- I-75 in the southeast corner of Bartow County, as well as a segment just north of Cartersville.
- ✤ US 411 near Cartersville.
- ✤ US 41 through Cartersville.

Analysis of anticipated traffic patterns in 2030 based on the report's travel demand model indicate a number of county roadways will have v/c ratios over 0.7 by that time. These include:

- ✤ The entire length of I-75 through the county.
- US 41 from the Tennessee Street overpass west to US 411 (to Rome). Also, a segment of US 41 in the far southern end of the county.
- US 411 just south of SR 140 in northeast Bartow.

## Average Daily Vehicle Miles of Travel and Vehicle Hours of Travel

The average daily VMT is expected to rise from 52.54 miles in 2000 to 87.02 miles in 2030, an increase of 66%. The average daily VHT is expected to rise from 1.16 hours to 3.4 hours between the years 2000 and 2030, an increase of 193%. Taken together, these two pieces of data suggest increasing traffic congestion over the next 25 years.

The study summarized Bartow County's current short-term and long-term transportation projects and examined a number of alternative transportation modes that should be considered for future development in order to reduce dependency on single occupancy vehicle travel in Bartow County. Finally, the study offered dozens of future transportation improvement projects (*Appendix B* in the Day Wilburn report), including type of deficiencies addressed, time frames and types of improvements needed, that the county can implement over the next 25 years to improve its transportation system.

## Alternative Modes

## Bicycle and Pedestrian Facilities

There are no county-designated bicycle paths in Bartow County. The state of Georgia has designated two bicycle paths through the county, however. One path (State Bicycle Route 70) runs from the Cobb County line to Emerson, where it turns west to Stilesboro and connects to State Bicycle Route 70, which connects Euharlee, Kingston and Adairsville.

The county does not have an effective network of sidewalks. While developers may be required to provide sidewalks within new subdivisions, there is little, if any, connectivity between these neighborhood sidewalks and other areas in the county.

## Pedestrian and Bicycle Facilities within Cartersville

Tennessee Street north or Porter Street—Pedestrian safety is an issue, due to lack of sidewalks. Worn pathways are visible along both sides of Tennessee Street. Sidewalks along both sides of Tennessee Street between Porter Street and Felton Road are needed.

## Streetscape Projects

In early 2005, the City of Cartersville initiated the Main Street Streetscape project from Tennessee Street to Bartow Street utilizing GADOT TE funding. This projected was estimated to cost \$625,000 and to be completed in 2006. The project concept is to unify the downtown streetscape, following a 6-block Main Street gateway corridor that runs through the heart of the historic downtown business district. Enhancements include new sidewalk, installation of historic style streetlights with new electrical service underground, street furniture (benches, trash cans, bicycle racks), improve handicapped accessibility and additional landscaping. This project has been endorsed by the Bartow County Chamber of Commerce, Downtown Development Authority, Bartow County

Commission, and the business owners along Main Street. General public information meetings have also been held.

## **Public Transportation**

Bartow Transit provides limited transit service within Bartow County. The program is sponsored by GDOT. Its service includes transportation for senior citizens throughout the county to local shopping centers and grocery stores as well as senior citizen centers.

There is no intercity bus service in Bartow County.

There are two Park and Ride lots in Bartow County; one is located on Nelson Street in Cartersville and the other is located on SR 3 in Adairsville. These lots provide opportunities for carpooling as well as access to express bus service to selected locations in the metro Atlanta area.

Overall, most Bartow County residents must rely on automobiles for normal daily transportation needs, although residents in some areas of the city of Cartersville may be able to walk to many of their most popular destinations.

## Parking

Availability of adequate parking is not a problem within unincorporated Bartow County. No areas were identified as requiring parking upgrades.

## Railroads, Trucking and Airports

## Bartow Field

Cartersville-Bartow County has a single public airport located southwest of the City. The airport is classified as B-II, allowing for small recreational and business airplanes. An Airport Layout Plan was approved by the FAA in May of 1997. The plan includes adding 750 feet to the runway, extending a parallel taxiway, adding hangers and an access road, and removing an existing hanger within the building restriction line. The runway extension has been completed making the runway length 5,750 feet long; however, because of obstacles to the south, a displaced threshold is used, making only 5,000 feet available for landing from the south. The full 5,750 runway can be used for take-offs and landing from the north.

## **Rail Facilities**

Rail facilities in Bartow County are operated by CSX and provide freight rail service only. There is no passenger rail service through Bartow County. One line runs from Adairsville to Acworth. This line is owned by the state of Georgia and is leased by CSX. The second line runs from Taylorsville in the southwest to Funkhouser in northeast Bartow. CSX owns the rail lines that converge in the City of Cartersville downtown area from the north, northwest, southwest, and southeast. Rail traffic causes delay for drivers in the downtown area due to frequency of at-grade intersections.

The cities of Cartersville and Euharlee are the only two municipalities who have conducted additional traffic analyses in conjunction with the development of this plan. Summaries of their efforts follow.

## City of Cartersville Transportation Planning

Cartersville is committed to the development and implementation of a transportation plan, in cooperation with local, state, and federal agencies to ensure safe, efficient movement of people and commerce in and around our community. In 1999, Bartow County and Cartersville prepared a countywide transportation study entitled "City of Cartersville Bartow County Short-Term Transportation Study" by Jordon Jones & Goulding. The purpose of this study was two-fold: 1) to identify transportation planning projects that are immediately necessary based on current deficiencies in the local transportation network and public input, and 2) to identify future transportation needs based on projected growth in the cities and County for the next 25 years. Based on that detailed inventory of existing conditions, the study team used a variety of methods to analyze that inventory and complete an Identification of Needs for transportation improvements. The Identification of Needs included community and staff input, a field review of the road network, and analysis of all traffic data, currently planned improvements, and existing system deficiencies. The planning horizons for the projects are short, next 5 years, or long 5 to 10 years. The Bartow County Transportation Study included input from the public to assist in selecting and prioritizing transportation projects. Two meetings were held in Cartersville, one in November 1999 and another in January 2000 to gather citizen input.

The study area was established as the entire unincorporated County and the cities of Cartersville, Adairsville, Emerson, Euharlee, Kingston, Taylorsville, and White.

## **Future Conditions**

As stated above a traffic impact analysis was completed in September 2004 in anticipation of a major development proposal. This study not only looked at the impacts of the specific large development proposal, but at existing conditions and future background volumes that included the recently permitted Cartergrove development. This large development will contain 3,335 single family homes and approximately 214,000 square feet of retail space on the south side of Old Alabama Road. Build out is anticipated in the year 2011.

Adjustments were made to the calculated background volumes to account for the expected reassignment of east-west traffic from the existing SR 113 (West Avenue) to the Emerson Bypass and improving Old Alabama Road. Since Old Alabama Road are to be

extended west to SR 113, adjustments were also made in the projected volumes at the SR 61 intersection.

An annual growth rate of 2% was applied to the existing volumes for 21 and 23 years and added to the total when completed traffic volumes expected from both the proposed project and the previously approved adjacent development. These derived volumes were then compared to the 2025 and 2027 design volumes provided for the improvements to Old Alabama Road and the construction of the Emerson Bypass. Additions and reassignments of turning movement volumes were made to the background volumes, where possible to approximate the design volumes in the years 2025 and 2027.

Using the above methodologies, the level of service at each of the selected intersections was determined for the City of Cartersville with the existing lanes and controls, except for the intersections of the Emerson Bypass. As can be seen from the table below, most selected intersections are expected to operate at unacceptable levels of service during both the AM and PM peak hours in 2011 without improvements.

| Selected Intersections                     |    |    |  |  |  |  |  |  |
|--|----|----|--|--|--|--|--|--|
| Background Traffic LOS-2011                |    |    |  |  |  |  |  |  |
| Intersection                               | AM | PM |  |  |  |  |  |  |
| SR 61 at Old Alabama/Carnes Road           | F  | F  |  |  |  |  |  |  |
| Douthit Ferry Road at Old Alabama Road     | F  | F  |  |  |  |  |  |  |
| Old Alabama Road at Bates Road             | F  | F  |  |  |  |  |  |  |
| Red Top Mountain Road at SB I-75           | F  | F  |  |  |  |  |  |  |
| Red Top Mountain Road at NB I-75           | F  | F  |  |  |  |  |  |  |
| Douthit Ferry Rd. at Walnut/Pine Grove Rd. | F  | D  |  |  |  |  |  |  |
| Douthit Ferry Road at SR 61 (West Avenue   | D  | E  |  |  |  |  |  |  |

## Capacity Assessment

The latest traffic impact analysis are based on the programmed construction of the Emerson Bypass from Red Top Mountain Road (existing I-75 Interchange) with an overpass at US 41, a grade-separated interchange at SR 293, and continuation as Old Alabama Road to existing SR 113 west of SR 61. In conjunction with the widening of this portion of Old Alabama Road to four lanes, it is assumed that left and right turn lanes at the intersections will be constructed. Because of the large volumes of existing vehicles on the northbound I-75 ramps turning left on Red Top Mountain road, traffic signals will probably need to be installed at the intersections of both ramps with Red Top Mountain Road. The timing of these signals should be coordinated. In addition, the stop sign control of eastbound Old Alabama Road at SR 61 will need to be changed when Old Alabama Road is widened to four lanes and extended west to existing SR 113. This should result in more vehicular trips through this intersection on Old Alabama road and

less trips on SR 61. A traffic signal will probably be needed. Signal warrant studies would be needed to determine if signals should be installed.

Douthhit Ferry Road is also analyzed as widened to a four-lane road from Old Alabama road to SR 61 (West Avenue) with left and right turn lanes at intersections and a traffic signal installed at the intersection with Walnut/Pine Grove Road (currently a four-way stop sign controlled.)

## Existing

The eastbound and westbound approaches to the intersection of Old Alabama Road and SR 61 are currently operating at a level of service F in the Am peak hour. A traffic signal would be expected to mitigate these delays.

At the intersection of the I-75 northbound exit ramp and Red Top Mountain Road, the northbound left turn existing movement is currently operating at a level of service F in the PM peak hours. A traffic signal would be expected to mitigate these delays.

## Future

The peak hour delays at Old Alabama road and SR 61 are expected to increase unless additional traffic control signals are installed at the following intersections:

- ✤ Old Alabama Road and SR 61;
- Douthhit Ferry Road and Pine Grove Road;
- Red Top Mountain Road and the I-75 ramps; and
- ✤ Old Alabama Road and Bates Road.

Both the northbound and southbound ramps of I-75 at Red Top Mountain road will be expected to operate with unacceptable delays in the peak hours, unless traffic signals are installed.

The intersection of Walnut/Pine Grove Road and Douthhit Ferry Road will operate with unacceptable delays by the year 2011 with the existing four-way stop sign control. A traffic signal would be expected to mitigate the delays.

The intersection of Douthhit Ferry Road at SR 61 (West Avenue) is expected to operate with unacceptable delays by the year 2011. In addition to the planned widening Douthhit Ferry road to four through lanes through the intersection with SR 61 (West Avenue), the addition of a southbound right-turn overlap phase would be expected to mitigate the delays.

## City of Euharlee Transportation Analysis

Details of the city of Euharlee's transportation analysis are available in the document *City* of *Euharlee 2025 Comprehensive Plan* which is on file with the city. Highlights of the city's transportation analysis are summarized below.

### High Volume Traffic Roadways

City roadways with high average daily traffic patterns (vehicles per day – vpd) include:

- ✤ Euharlee Road between Milan Bridge Road and McCormack Road (9100 vpd).
- Euharlee Road at Woodland Middle School and Euharlee Elementary School (7,000 vpd).
- Cliff Nelson Road and Covered Bridge road also exceed 1,500 vpd.

<u>Traffic Growth</u> Traffic count figures from the GDOT traffic count station on Euharlee Road at the western city limits, which is the only traffic count station in the city, indicate traffic at this station increased from 1,900 vpd in 1997 to 3,200 vpd in 2002, an increase of 68%. Assuming the city's growth rate over the past five years continues into the future, anticipated traffic counts at this station in the year 2025 will increase tenfold to 31,200 vpd. It should be noted that this traffic count station is located on the least used stretch of Euharlee Road within the city. Traffic counts on Euharlee Road are significantly higher on the eastern stretches of the road. Anticipated traffic counts on Euharlee Road in front of the two schools are expected to be over 70,000 vpd by 2025.

### Level of Service Analysis of City Intersections (pp.7-7 through 7-17)

There are no signalized intersections in Euharlee. All intersections are controlled by signage. Based on an analysis of simulated traffic patterns (using the CORSIM traffic simulation modeling technique) for AM and PM peak travel hours, all intersections with the exception of one were graded at LOS "C" or better during both the AM and PM peak travel hours. Euharlee Road at the intersection with the eastern driveways for the middle and elementary schools was graded at LOS "F" during the AM peak travel time. City police officials are usually stationed at this location to help manage traffic in the mornings and afternoons, but sometimes they are not available for this duty.

All other intersections within the city were graded at LOS "A" during both AM and PM peak travel times, with the exception of the intersection of Euharlee Road and the western school driveways and the intersection of Euharlee and Covered Bridge Road. In the AM peak travel hour, the intersection of Euharlee Road and the western school driveways is graded LOS "D" for eastbound buses turning left into Euharlee Elementary School. Covered Bridge Road at Euharlee is graded LOS "F" during AM peak travel hours for unacceptable delays facing vehicles attempting to access Euharlee Road from Covered Bridge Road.

Traffic conditions at these intersections will continue to degrade as traffic volumes increase on Euharlee Road.

### <u>Roadway Safety</u> (pp.7-25 through 7-28)

Several intersections had relatively high numbers of accidents during the 2001-2003 study period. The high accident intersections include:

- ✤ Hardin Bridge Road at Euharlee Road (7 accidents).
- McCormack Road at Euharlee Road (6 accidents).
- Cliff Nelson Road at Euharlee Road (3 accidents).

- ✤ Covered Bridge Road at Euharlee Road (3 accidents).
- Euharlee Road and main driveway entrance to Woodland Middle School (3 accidents).
- Dobson Drive and Euharlee Road (3 accidents).
- Covered Bridge Road and Euharlee-Five Forks Road (3 accidents).

The city does not currently have an extensive network of pedestrian or bicycle facilities. There are areas of the city with significant pedestrian travel. The city has developed a basic concept plan (Figure 7.1.3.3. in the city's comprehensive plan document) to expand its bicycle/pedestrian/multi-use pathways that will facilitate non-motorized traffic with the city.

## Transportation Issues in Other Municipalities

None of the other municipalities have conducted transportation analyses beyond what was included in the *Short Term Transportation Plan 2000* and the *2002 Long Range Transportation Plan* discussed earlier. Several of the cities have identified transportation issues that they must address in the coming years, however. A brief summary of these issues is found below.

## City of Adairsville

Traffic on SR 140 through the entire city limits will become increasingly congested in coming years with the increase in residential and commercial development along this road and the feeder roads leading into it.

## City of Emerson

Significant transportation issues facing the city of Emerson include:

- Access issues related to the Old Alabama Road northern bypass around the city. A significant amount of vacant commercial and industrial areas exist in the northern areas of the city. The city is concerned about future development potential for these properties if adequate access to the bypass is not provided.
- Improvements to Old Alabama Road from Puckett Drive to SR 293. Significant commercial development is expected in the area of SR 293 between I-75 and Old Alabama Road. The city expects significant traffic along Old Alabama Road from areas west of the city as new residents seek access to this commercial development. The developers of the Cartergrove residential development in southern Cartersville have provided one million dollars to the city to help upgrade this stretch of Old Alabama Road.

## City of Kingston

The most pressing transportation issue in the city of Kingston in the coming years is related to the anticipated increase in traffic along Hardin Bridge Road that will be associated with residential growth in the southern part of the city. The city also has related concerns about growing traffic congestion at the intersection of Hardin Bridge Road and US 411, which does not actually fall within the city limits.

## City of White

The city of White expects significant traffic growth along the US 411 corridor through the city, much of which will be the result of growth patterns in areas outside the city limits. GDOT will be conducting a feasibility study to determine whether or not turn lanes and sidewalks are needed along this corridor within the city limits.

# **Public Participation Program**

## A. Identification of Stakeholders

The county and the respective cities have identified the following stakeholders in the Bartow County 2006 Comprehensive Plan. Members of these groups will be included in the public participation component of planning process.

#### **Local Governments**

Mayor of Adairsville Mayor of Cartersville Mayor of Emerson Mayor of Euharlee Mayor of Kingston Mayor of Taylorsville Mayor of White Bartow County (County Commissioner)

#### **Other Local Officials**

Jerry Milan (Cartersville – Community Infrastructure) Gary Riggs (Cartersville - Community Infrastructure) Jim Stafford (Cartersville – Community Infrastructure) Ped Alday (Cartersville – Preservation) Mjr. Robert Bishop (Cartersville Police Dept.)

#### State Government

Georgia Department of Community Affairs Coosa Valley Regional Development Center Georgia Environmental Protection Division Georgia Department of Transportation North Georgia – Metro Water Planning District Department of Family and Children Services

### **Federal Government**

Corps of Engineers

#### Education

Bartow County School Superintendent City of Cartersville School Superintendent Excel Christian Academy Georgia Highlands College – Bartow Campus North Metro Technical College First Presbyterian Church

#### **Economic Development Groups/Local Business/Tourism**

Cartersville-Bartow County Chamber of Commerce Cartersville-Bartow County Joint Development Authority Cartersville Downtown Development Authority Cartersville-Bartow County Convention and Visitors Bureau Bartow County Economic Development Director Adairsville Downtown Development Authority Kingston Downtown Development Authority Shaw Industries Georgia Commercial Realty **IBBS Call Center** Toyo Tire Komatsu America Corp. Cartersville Career Center **Raintree Properties** Barnsley Gardens D. Morgan's

#### Housing

Market Square Mortgage Greg Bennett Homes Century Bank Cope Builders Steve Hatley Homes Greatwood Construction Temples Construction Ethowah Valley Housing Authority

### **Community Health Care**

Bartow County Health Department Cartersville Medical Center

### **Public Utilities**

Georgia Power MEAG Power

### **Other Community Groups**

Hands of Christ

Etowah Valley Historical Society Keep Bartow Beautiful Covered Bridge Players Euharlee Historical Commission Euharlee Senior Citizens Representative Beyond Excellence & Innovations Think Tank Cultural Arts Alliance Kingston Womens' History Club New Frontier Club

## B. Public Participation Methods

The county-wide public participation component of the Comprehensive Plan will include the following:

- Stakeholder Input Meetings: Stakeholder meetings will be held in order to review the specific goals and objectives of the Comprehensive Plan to seek their input on specific strategies for achieving those goals. These meetings will be held at the Frank Moore Government Center.
- Focus Group Meetings with Other Community Leaders: Focus groups with individuals representing other useful perspectives on local development will be held in order to obtain their input on the goals and strategies of the Comprehensive Plan. These individuals will not be drawn from public officials; instead they will represent other individual interests from around the county. Officials from each local government will be asked to recommend a number of representatives from their locality.
- Open Forum for General Citizenry: An open forum will be held at the Civic Center where members of the general public can review the Comprehensive Plan, ask questions of local officials and voice their concerns about the Plan. Written feedback forms will be provided at the venue. The open forum will be held on a weeknight to maximize opportunities for public participation.
- Bartow County Website Feedback: The Comprehensive Plan will be made available on the Bartow County website for download by interested parties. The website will include a link to a county email address that will allow for the submission of comments and questions.
- Review at local government offices: The Comprehensive Plan will be available at local government offices for review by local citizens.

## Advertising the Comprehensive Plan

Public notification of the Open Forum for the General Citizenry and of the availability of the Plan at local government offices will be satisfied by:

- Public notices in the local newspapers serving each of the respective communities.
- ✤ Public service announcements on local radio stations.
- Written notices to be posted in local government offices and other public buildings.
- ✤ Announcements at public meetings of respective city councils.
- Notices to be posted on the county website.
